1. What is the concept of a learning objective?

a) A learning objective must include the phrases "to know" and "to understand".  
b) A learning objective should describe what students should know or be able to do at the end of the lesson that they couldn't do before.  
c) A learning objective is a general statement of what the overall goal is in a lesson.

2. What is assessment?

a) A structured method to score students' performance.  
b) Various procedures used to obtain information about student performance or learning progress.  
c) A method or a systematic procedure to measure a person's ability, knowledge, or performance in a certain domain by posing a set of questions.

P.S. Free 2026 Oracle 1z1-076 dumps are available on Google Drive shared by CertkingdomPDF: [https://drive.google.com/open?id=1Y-aKV276H24080s3AsNJDDg1es3jr\\_DR](https://drive.google.com/open?id=1Y-aKV276H24080s3AsNJDDg1es3jr_DR)

In the 21 Century, the 1z1-076 certification became more and more recognized in the society because it represented the certain ability of examinees. However, in order to obtain 1z1-076 certification, you have to spend a lot of time preparing for the 1z1-076 Exam. Many people gave up because of all kinds of difficulties before the examination, and finally lost the opportunity to enhance their self-worth. But our 1z1-076 exam questions will help you pass the exam for sure.

Achieving the Oracle 1z1-076 certificate is an excellent way of paying your way in the tech field. However, to become Oracle 1z1-076 certified, you will have to crack the Oracle 1z1-076 exam. This is a challenging task since preparation for the Oracle 1z1-076 Exam demands an inside-out understanding of 1z1-076 domains and many Oracle 1z1-076 test applicants do not have enough time due to their busy routines.

## Free 1z1-076 Practice Exams, 1z1-076 Real Exam Answers

The pressure is not terrible, and what is terrible is that you choose to evade it. You clearly have seen your own shortcomings, and you know that you really should change. Then, be determined to act! Buying our 1z1-076 exam questions is the first step you need to take. And as long as you study with our 1z1-076 Practice Guide, you will find that the exam is just a piece of cake and the certification is easy to get. With the certification, you will find your future is much brighter.

## Oracle Database 19c: Data Guard Administration Sample Questions (Q55-

## Q60):

### NEW QUESTION # 55

Examine the following parameter settings of the physical standby database:

\* STANDBY\_FILE\_MANAGEMENT=AUTO  
\* ENABLED\_PDBS\_ON\_STANDBY=<null>

During which TWO tasks are files automatically created in the physical standby database after structure changes on the primary database?

- A. Adding or dropping a redo file group
- B. Performing transportable tablespaces
- C. Creating a PDB from the existing PDB within the same CDB
- D. Adding a data file or creating a tablespace
- E. Renaming a data file in the primary database

**Answer: C,D**

Explanation:

When STANDBY\_FILE\_MANAGEMENT is set to AUTO, the Oracle Data Guard automatically creates, deletes, and renames files on the standby database to match the changes made on the primary database. The tasks that lead to the automatic creation of files on the standby include:

- \* Adding a data file or creating a tablespace (C): When a new tablespace is created or a new data file is added on the primary database, the standby database automatically replicates this action, maintaining structural consistency with the primary database.
- \* Creating a PDB from the existing PDB within the same CDB (D): Creating a new Pluggable Database (PDB) within a Multitenant Container Database (CDB) on the primary database triggers an automatic creation of the corresponding PDB within the standby CDB.

### NEW QUESTION # 56

You have a Data Guard broker configuration consisting of:

A primary database

One local physical standby database

One far sync instance

A remote physical standby database

The broker configuration was created with the DGMGRL utility after creating all the databases and the far sync instance with command-line tools.

What is the correct way to add this configuration to Enterprise Manager Cloud Control assuming all the nodes have been discovered already as Enterprise Manager targets?

- A. Use the DGMGRL utility to register the configuration with the Enterprise Manager Cloud Control agent on the primary database node. This will enable the discovery of all the other databases in the configuration as targets which will be ready to be monitored.
- B. Discover either of the physical standby databases as a target by refreshing the node on which they run, and the other databases and instances in the Data Guard Broker configuration will be discovered as targets automatically and be ready to be monitored.
- C. Discover the primary database as a target in Enterprise Manager Cloud Control. Then discover the existing Data Guard Broker configuration for the primary and all the other databases in the configuration will be discovered as targets and be ready to be monitored.
- D. Discover the primary as a target by refreshing the node on which it runs, and the other databases and instances in the Data Guard broker configuration will be discovered as targets automatically and be ready to be monitored.
- E. Delete the Data Guard Broker configuration using DGMGRL and then re-create it using Enterprise Manager Cloud Control to enable all the databases in the configuration to be discovered as targets and to be ready to be monitored.

**Answer: C**

### NEW QUESTION # 57

Examine the Data Guard configuration:

Which three will be true after a successful failover to Cats?

- A. The configuration will be in Maximum Performance mode.
- B. Dogs will be in the disabled state and has to be manually reinstated.
- C. The configuration will be in Maximum Availability mode.
- D. Sheep will be in the enabled state.
- E. Sheep will be in the disabled state.

**Answer: B,C,D**

Explanation:

After a successful failover to the 'cats' database in a Data Guard configuration:

\* B: Sheep, being another standby database, would typically remain in the enabled state unless specifically disabled or if there was a configuration issue.

\* D: Dogs, which was the primary database prior to failover, will be in a disabled state as part of the failover process. Manual intervention is required to re-establish 'dogs' as a standby database or to return it to the primary role through another role transition.

\* E: If the configuration was in Maximum Availability mode before failover, it would remain in this mode after failover, provided all settings were properly configured and no changes were made to the protection mode.

Option A is incorrect because failover does not automatically change the protection mode to Maximum Performance. The protection mode remains as it was prior to the failover unless manually altered.

References: The behavior of Oracle Data Guard during failover and the resulting configuration state is described in the Oracle Data Guard Broker documentation.

#### NEW QUESTION # 58

Your Data Guard environment contains a primary database and three standby databases with these attributes:

1. prod : Primary database
2. prod\_prq : Physical standby database with real-time query enabled used by reporting applications
3. prod\_lsby: Logical standby database used by DSS
4. PROD\_SSBY: Snapshot standby database used for Real Application Testing

Which TWO can be used to prevent clients from connecting to the wrong database instance?

- A. Establish Oracle Net connectivity to the primary database instance from all the standby database instances.
- B. Create database services on each of the standby databases, start the services, and add connection descriptors on the clients to connect to those services.
- C. Create a static service for each of the databases, register it with the local listener of each database instance, and add connection descriptors on clients to connect to those services.
- D. Create role based services with the `svrctl` utility when using clusterware for Oracle RAC databases or Oracle Restart for single instance Oracle databases.
- E. Create database services for each database and use event triggers to make sure that services are activated only when the database is in the correct role.

**Answer: B,E**

Explanation:

Creating dedicated database services for each database instance (Option D) and utilizing event triggers to manage these services based on the role of the database (Option E) ensure that clients connect to the appropriate database instance based on its current role and state. This approach leverages the flexibility and control provided by Oracle Net services and database event management to direct client connections to the suitable primary or standby instance, enhancing the overall robustness and reliability of the Data Guard environment. Reference: Based on Oracle Database 19c best practices for managing connectivity and services in a Data Guard setup, including the use of role-based services and event-driven service management.

#### NEW QUESTION # 59

Which FOUR database parameters might be affected by or influence the creation of standby databases?

- A. DB\_NAME
- B. ARCHIVE\_LAG\_TARGET
- C. COMPATIBLE
- D. FALSERVER
- E. STANDBY\_ARCHIVE\_DEST
- F. db\_file\_name\_convert

## Answer: A,C,E,F

Explanation:

- \* DB\_NAME (A): The name of the database, which should remain consistent across the primary and standby databases.
- \* db\_file\_name\_convert (C): This parameter helps define the mapping of data file names from the primary to the standby database, which is crucial during the creation and operation of a standby database.
- \* COMPATIBLE (D): The compatibility level can influence the features that can be used on the standby database and must be consistent with or higher than that of the primary database, especially after upgrades.
- \* STANDBY\_ARCHIVE\_DEST (F): This parameter specifies the destination of archived redo log files on the standby database, which is important for log transport and apply services.

## NEW QUESTION # 60

.....

It is estimated conservatively that the passing rate of the exam is over 98 percent with our 1z1-076 study materials as well as considerate services. We not only provide all candidates with high pass rate study materials, but also provide them with good service. The thoughtfulness of our 1z1-076 Study Materials services is insuperable. What we do surely contribute to the success of 1z1-076 practice materials.

**Free 1z1-076 Practice Exams:** <https://www.certkingdompdf.com/1z1-076-latest-certkingdom-dumps.html>

We provide you with the best Oracle Database 19c 1z1-076 dumps, covering the topics of the Oracle Database 19c 1z1-076 certification, Oracle 1z1-076 Study Tool They just make you confused and waste your precious time and money, Then you can start learning our 1z1-076 exam questions in preparation for the exam, we can claim that if you study with our 1z1-076 exam questions for 20 to 30 hours, then you will be easy to pass the exam.

I speak on the topic of networking a lot, Let's see how this works, We provide you with the best Oracle Database 19c 1z1-076 Dumps, covering the topics of the Oracle Database 19c 1z1-076 certification.

They just make you confused and waste your precious time and money, Then you can start learning our 1z1-076 exam questions in preparation for the exam, we can claim that if you study with our 1z1-076 exam questions for 20 to 30 hours, then you will be easy to pass the exam.
