The modern ServiceNow world is changing its dynamics at a fast pace. To stay updated and competitive you have to learn these technological changes. With the one Certified Application Developer-ServiceNow (CAD) certification exam you can do this easily. The Certified Application Developer-ServiceNow (CAD) certification exam offers a unique and quick way to learn new in-demand expertise and enhance your knowledge.

The CAD certification exam consists of 60 multiple-choice questions, and the candidate has 90 minutes to complete it. CAD exam covers various topics, including ServiceNow application architecture, data model, user interface (UI) development, business rules, workflows, and integrations. CAD exam requires a deep understanding of the ServiceNow platform, its modules, and its features. Therefore, the candidate must have significant experience developing ServiceNow applications before taking the exam.

The CAD Certification program is aimed at IT professionals who have experience working with ServiceNow and are looking to take their skills to the next level. The program is delivered through a combination of online training and hands-on experience, and covers a range of topics including application design, development, testing and deployment.

CAD Exam Cram Review - Reliable CAD Braindumps Ebook

ServiceNow CAD practice test software contains many ServiceNow CAD practice exam designs just like the real Certified Application Developer-ServiceNow (CAD) exam. These CAD practice exams contain all the CAD questions that clearly and completely elaborate on the difficulties and hurdles you will face in the final CAD Exam. Certified Application Developer-ServiceNow (CAD) practice test is customizable so that you can change the timings of each session. PrepPDF desktop ServiceNow CAD practice test questions software is only compatible with windows and easy to use for everyone.

The CAD Certification program is divided into two levels: the CAD Foundation level and the CAD Professional level. The Foundation level is designed for IT professionals who are new to ServiceNow and provides an introduction to the platform and its capabilities. The Professional level is aimed at more experienced developers who are looking to build more complex applications and integrate them with other systems.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q149-Q154):

NEW QUESTION # 149

Which one of the following is true regarding Application Scope?

- A. Developers can choose the prefix for a scope's namespace
- **B. Applications downloaded from 3rd party ServiceNow application developers cannot have naming conflicts**
- C. All applications are automatically part of the Global scope
- D. Any developer can edit any application

Answer: B

Explanation:

NEW QUESTION # 150

For Application Access there is a configuration option called Allow access to this table via web services. Which one of the following statements is true when this option is selected?

- A. The user performing the query via web services must have the correct permissions to access the table's records
- B. This option restricts access only to SOAP web services but does not apply to REST
- C. This option restricts the ability to delete records via web services but records can always be read
- D. Even when not selected, users with the correct permissions can use web services to access the table's records

Answer: A

Explanation:

Application Access is a feature that allows you to control the access level of other application scopes to your application's data tables. By selecting the Allow access to this table via web services option, you can enable other application scopes to access your data tables using web services, such as SOAP or REST. However, the user performing the query via web services must have the correct permissions to access the table's records. The user must have the appropriate roles and access controls to perform the operations on the table, such as create, read, write, or delete.

The other statements are not true when this option is selected. This option does not restrict the ability to delete records via web services, nor does it allow records to be always read. The access to the records depends on the user's permissions and the web service method. This option also does not restrict access only to SOAP web services, but applies to both SOAP and REST web services. Finally, this option is not the only way to enable web service access to the table's records. Even when this option is not selected, users with the correct permissions can use web services to access the table's records, as long as they specify the application scope in the web service request.

Web service access to scoped applications

NEW QUESTION # 151

What happens to the List view when a new field is added to an existing table?

- A. A new List View is created with the new field
- B. The new field is added at the end of the List
- C. The new field is added at the start of the List
- D. The new field is not added to the List view

Answer: D

Explanation:

In ServiceNow, when a new field is added to an existing table, it is not automatically included in any existing List views. List views are predefined configurations that determine which fields are displayed when viewing records in a list format. To display the new field in a List view, you must manually modify the List layout to include the field.

Steps to Add a New Field to a List View:

Navigate to the List Layout Configuration:

Go to the table's list view.

Right-click on the header row (where the column titles are displayed).

Select "Configure" and then "List Layout."

Add the New Field:

In the List Layout configuration, you'll see two columns: "Available" and "Selected." Locate your new field in the "Available" column. Use the arrow buttons to move the new field to the "Selected" column, placing it in the desired order.

Save the Configuration:

Click "Save" or "OK" to apply the changes.

The new field will now appear in the List view as configured.

NEW QUESTION # 152

When writing a Client Script to provide feedback targeted at a specific field, which method should be used?

- A. `g_form.addFieldMsg()`
- B. `g_form.addInfoMessage()`
- C. `g_form.showFieldMsg()`
- D. `g_form.showInfoMessage()`

Answer: C

Explanation:

https://docs.servicenow.com/bundle/tokyo-application-development/page/script/useful-scripts/reference/r_DisplayFieldMessages.html

NEW QUESTION # 153

What occurs when an existing table is extended in ServiceNow?

- A. The parent table's Access Controls are ignored when determining access to the new table's records and fields
- B. You must script and configure all required behaviors
- C. The new table inherits the functionality built into the parent table
- D. The new table does not inherit any of the fields from the parent table

Answer: C

Explanation:

In ServiceNow, extending a table means creating a new table (child class) that inherits properties from an existing table (parent class). This inheritance includes fields, business logic, and other configurations, allowing for efficient reuse and customization.

Key Points:

- * **Field Inheritance:** The child table inherits all fields from the parent table. For example, if you extend the Task table, your new table will include fields like "short_description" and "priority."
- * **Business Logic Inheritance:** The child table also inherits business rules, client scripts, and other logic defined on the parent table, ensuring consistent behavior across related tables.
- * **Access Controls:** Access controls are not ignored; instead, the child table inherits the parent table's access controls. However, you can define additional access controls specific to the child table as needed.
- * **Customization:** While the child table inherits many properties, you can add new fields, scripts, and behaviors to tailor it to specific requirements without affecting the parent table.

Reference: For more detailed information, please refer to the official ServiceNow documentation on Table Extension and Classes.
