## Development-Lifecycle-and-Deployment-Architect試験の準備方法 | 検証するDevelopment-Lifecycle-and-Deployment-Architect復習過去問試験 | 一番優秀なSalesforce Certified Development Lifecycle and Deployment Architect無料過去問

試験は簡単ではないことは広く認められていますが、この分野の労働者にとって関連するDevelopment-Lifecycle-and-Deployment-Architect認定は非常に重要であるため、多くの労働者がこの課題に対処する必要があります。より効率的で簡単な方法で試験に合格し、関連する認定を取得する必要があります。最近の10年間で、Development-Lifecycle-and-Deployment-Architect試験問題は、国際市場での温かい歓迎と迅速な販売に対応しました。Development-Lifecycle-and-Deployment-Architect学習教材は、他のメーカーと同じくらいリーズナブルな価格であるだけでなく、次の点で明らかに優れています。

### Salesforce Certified Development Lifecycle and Deployment Architect 認定 Development-Lifecycle-and-Deployment-Architect 試験問題 (Q166-Q171):

#### 質問 # 166

Universal Containers (UC) has two subsidiaries which operate independently. UC has made the decision to operate two of separate Salesforce orgs, one for each subsidiary. However, certain functions and processes between the two orgs must be standardized. Which two approaches should UC take to develop customizations once, and make them available in both orgs? Choose 2 answers

- A. Develop the functionality in a sandbox and deploy it to both production orgs

- B. Create a package in a Developer Edition org and deploy it to both production orgs
- C. Set up Salesforce-to-Salesforce to deploy the functionality from one org to the other
- D. Create a managed package in a sandbox and deploy it to both production orgs

正解: B

#### 質問 # 167

Northern Trail Outfitters (NTO) recently acquired Eastern Trail Outfitters (ETO). NTO's sales leadership team had hands-on experience with the ETO's Sales Optimization app and have given the feedback that the app would benefit NTO's sales team. Which option should the architect recommend for having ETO's Sales Optimization app in NTO's Salesforce org in the shortest possible time?

- A. Create a core team and build the Sales Optimization app in NTO's org.
- B. Create a managed package of the app and deploy in NTO's org.
- C. Create users in ETO's org and provide access to NTO's sales team
- D. Create an unmanaged package of the app and deploy in NTO's org.

正解: C

#### 質問 # 168

Product owners at Universal Containers want to ensure that all the requirements have test cases associated with them so that no functionality is left untested during user acceptance testing.

What project artifact can help meet the needs of the business?

- A. Testing strategy
- B. Requirement traceability matrix
- C. Test execution plan
- D. User acceptance test scripts

正解: B

解説:

Explanation

A requirement traceability matrix is a project artifact that maps each requirement to its corresponding test cases, ensuring that all requirements are covered by testing. User acceptance test scripts are the actual steps to execute the test cases, not the artifact that links them to the requirements. Testing strategy and test execution plan are high-level documents that describe the overall approach and schedule for testing, not the specific mapping of requirements and test cases.

#### 質問 # 169

Universal Containers has three types of releases in its release management strategy: daily, minor (monthly), and major (quarterly). A user has requested a new report to support an urgent client request. What release strategy would an Architect recommend?

- A. Utilize the minor release process to create the report directly in production bypassing the full sandbox.
- B. Utilize the major release process to create the report directly in production bypassing the full sandbox.
- C. Utilize the major release process to create the report in a full sandbox and then deploy it to production.
- D. Utilize the daily release process to create the report directly in a full sandbox and then deploy it to production.

正解: D

解説:

Explanation

The best release strategy for creating a new report to support an urgent client request is to utilize the daily release process. The daily release process is designed for small and quick changes that do not require extensive testing or approval. The daily release process can create the report directly in a full sandbox and then deploy it to production. The major and minor release processes are more suitable for large and complex changes that require more testing and approval. The major and minor release processes should not create the report directly in production, as this may cause errors or conflicts.

### 質問 # 170

Universal Containers is having trouble deploying metadata from SIT to UAT. UAT is complaining that it does not recognize some new Salesforce metadata types to be deployed. The deployment from Dev to SIT worked perfectly. What could be the problem?

- A. There is no problem, this is expected behavior.
- B. Use the DX command line instead.
- C. SIT is on a preview release and UAT is not.
- **D. UAT is on a preview release and SIT is not.**

正解: D

解説:

Explanation

The problem is that UAT is on a preview release and SIT is not. A preview release is a version of Salesforce that contains the features and enhancements that will be available in the next major release. Preview releases are usually available a few weeks before the official release date, and they are assigned to a subset of instances. If UAT and SIT are on different instances, they may have different release versions, which can cause deployment issues. For example, if UAT has a preview release that contains some new metadata types that are not available in SIT, then deploying those metadata types from SIT to UAT will fail. To avoid this problem, the architect should check the Sandbox Preview Guide<sup>1</sup> and the Release Notes<sup>2</sup> to see if there are any changes that affect the deployment, and refresh and redeploy the sandboxes accordingly. There is a problem, and it is not expected behavior. Using the DX command line instead will not solve the problem, as it will still encounter the same version mismatch. SIT is not on a preview release and UAT is not, as that would not cause any deployment issues.

### 質問 # 171

.....

一部のお客様は時間を無駄にしないホワイトカラーの従業員であり、プロモーションを得るために早急に Salesforce 認定を必要としますが、他のお客様はスキルの向上を目指している場合があります。そのため、Development-Lifecycle-and-Deployment-Architect の質問と回答の異なるバージョンを設定することにより、異なる要件を満たすようにします。特別なものは、オンラインの Development-Lifecycle-and-Deployment-Architect エンジンバージョンです。オンラインツールとして、便利で簡単に学習でき、Windows、Mac、Android、iOS などを含むすべての Web ブラウザとシステムをサポートします。このバージョンの Development-Lifecycle-and-Deployment-Architect 試験問題をすべての電子デバイスに適用できます。
