### 질문 # 105

Your organization continuously receives order revisions from customers, especially for additional products or services to support items they have already ordered on existing sales orders such as warranties or extended service agreements. Order Management supports order extensions that allow you to create a new line for a standard item or service that is not already related to an existing line of such a sales order.

Which four types of line actions can be executed by this extension feature?

- A. Copy
- B. Cancel
- C. Return
- D. Update
- E. Read
- F. Create

정답: A,C,D,F

설명:

Order extensions are custom actions that you can define to manipulate data on sales orders, such as adding, updating, copying, or returning lines<sup>1</sup>. You can use order extensions to handle order revisions from customers, such as adding additional products or services to support items they have already ordered<sup>2</sup>. The four types of line actions that can be executed by this extension feature are:

\* Copy: This action creates a new line by copying an existing line on the same order. You can specify the attributes to copy and the attributes to change on the new line<sup>1</sup>.

\* Update: This action updates one or more attributes of an existing line on the order. You can specify the attributes to update and the new values for them<sup>1</sup>.

\* Create: This action creates a new line on the order. You can specify the attributes and values for the new line<sup>1</sup>.

\* Return: This action creates a return order line for an existing line on the order. You can specify the attributes and values for the return line<sup>1</sup>.

Overview of Order Management

### 질문 # 106

The customer service representative in your company has received a request from a customer for appending additional quantity to an original sales order that has already been released to the warehouse. The sales order quantity revision has resulted in a new shipment line with the status "Ready to Release." What action would you take to ship the new line by merging it with the original shipment?

- A. Perform Pick Release by selecting the Append Shipment check box.
- B. Run the process Create Shipments with the parameter Create Shipment set to Yes.
- C. Run the process Create Shipments with the parameter Append Shipment set to Yes.

- D. Manually append the new line to the shipment.

정답: D

#### 질문 # 107

Which two attributes can you use to group shipment lines into a single shipment? (Choose two.)

- A. Carrier
- B. Item
- C. Ship-to location
- D. FOB
- E. Sales Order

정답: C,D

#### 설명:

A shipment comprises a set of shipment lines, grouped by certain common shipping attributes, that are scheduled to be shipped to a customer's ship-to location on a specific date and time. You can include items from different sales orders in a shipment. You can either manually or automatically group shipment lines to create a shipment. The shipment lines are grouped by the mandatory default criteria: ship-from location and ship-to location. However, you may also include additional grouping criteria, such as customer, freight terms, FOB (Free on board), and shipping method.

#### 질문 # 108

Your organization utilizes Configurator Cloud to support the majority of their customer sales orders, One of your primary jobs is to create and maintain the various Configurator tasks that support the sales order flows.

A lot of your work is concentrated on Configurator models.

Which two elements are subtabs on the Edit Configurator Model page > Structure tab?

- A. User Interfaces
- B. Rules
- C. Applicability
- D. Supplemental Structures
- E. Item attributes

정답: D,E

#### 설명:

The Edit Configurator Model page is where you can modify the structure, rules, user interfaces, and connectors of a configurator model in Configurator Cloud. The Structure tab is where you can view and edit the features and options that make up the model structure. The Structure tab has two subtabs: Item attributes and Supplemental Structures<sup>1</sup>.

\* Item attributes are the characteristics or properties of the features and options that participate in the model structure. You can use item attributes to define the behavior and appearance of the features and options, such as the default value, the display name, the data type, and the validation rules<sup>2</sup>.

\* Supplemental Structures are the additional structures that you can create and associate with the model structure. You can use supplemental structures to add more features and options to the model, such as accessories, services, or documentation. You can also use supplemental structures to create different views of the model, such as a technical view or a marketing view<sup>3</sup>.
