A Implementing and Operating Cisco Security Core Technologies (350-701) practice questions is a helpful, proven strategy to crack the Implementing and Operating Cisco Security Core Technologies (350-701) exam successfully. It helps candidates to know their weaknesses and overall performance. ExamsTorrent software has hundreds of Implementing and Operating Cisco Security Core Technologies (350-701) exam dumps that are useful to practice in real-time. The Implementing and Operating Cisco Security Core Technologies (350-701) practice questions have a close resemblance with the actual 350-701 exam.

Cisco 350-701 exam is an essential requirement for individuals who want to earn the CCNP Security certification. 350-701 exam tests the knowledge and skills of professionals in implementing and operating Cisco Security Core Technologies. 350-701 Exam is computer-based, and candidates have 120 minutes to complete it. 350-701 exam fee is \$400, and candidates can retake the exam after 5 days if they fail.

Boost Your Confidence with Online Cisco 350-701 Practice Test Engine

Our product boosts three versions which include PDF version, PC version and APP online version. The Implementing and Operating Cisco Security Core Technologies test guide is highly efficient and the forms of the answers and questions are the same. Different version boosts their own feature and using method, and the client can choose the most convenient method. For example, PDF format of 350-701 guide torrent is printable and boosts instant access to download. You can learn at any time, and you can update the 350-701 Exam Questions freely in any day of one year. It provides free PDF demo. You can learn the APP online version of 350-701 guide torrent in your computer, cellphone, laptop or other set. Every version has their advantages so you can choose the most suitable method of Implementing and Operating Cisco Security Core Technologies test guide to prepare the exam.

Cisco 350-701 certification exam is designed for security professionals who wish to validate their knowledge and expertise in implementing and operating Cisco security core technologies. 350-701 exam tests an individual's ability to implement and manage security solutions effectively, detect and mitigate security threats, and secure networks and devices.

Cisco 350-701 Exam is a 120-minute test that consists of 90-110 questions. 350-701 exam is computer-based and can be taken at any Pearson VUE testing center globally. 350-701 exam questions are in multiple-choice format, and the passing score is usually around 70%. 350-701 exam's cost varies depending on the country and currency, but it is generally around \$400-\$500.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q515-Q520):

NEW QUESTION # 515

A network engineer has entered the `snmp-server user andy myv3 auth sha cisco priv aes 256 cisc0380739941` command and needs to send SNMP information to a host at 10.255.254.1. Which command achieves this goal?

- A. `snmp-server host inside 10.255.254.1 snmpv3 andy`
- B. `snmp-server host inside 10.255.254.1 version 3 myv3`
- C. `snmp-server host inside 10.255.254.1 version 3 andy`
- D. `snmp-server host inside 10.255.254.1 snmpv3 myv3`

Answer: C

Explanation:

The command `"snmp-server user user-name group-name [remote ip-address [udp-port port]] {v1 | v2c | v3 [encrypted] [auth {md5 | sha} auth-password]} [access access-list]"` adds a new user (in this case "andy") to an SNMPv3 group (in this case group name "myv3") and configures a password for the user. In the `"snmp-server host"` command, we need to:
+ Specify the SNMP version with key word "version {1 | 2 | 3}"
+ Specify the username ("andy"), not group name ("myv3").
Note: In `"snmp-server host inside ..."` command, "inside" is the interface name of the ASA interface through which the NMS (located at 10.255.254.1) can be reached.

NEW QUESTION # 516

Which RADIUS attribute can you use to filter MAB requests in an 802.1 x deployment?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

Because MAB uses the MAC address as a username and password, you should make sure that the RADIUS server can differentiate MAB requests from other types of requests for network access. This precaution will prevent other clients from attempting to use a MAC address as a valid credential. Cisco switches uniquely identify MAB requests by setting Attribute 6 (Service-Type) to 10 (Call-Check) in a MAB Access-Request message. Therefore, you can use Attribute 6 to filter MAB requests at the RADIUS server.

NEW QUESTION # 517

Drag and drop the features of Cisco ASA with Firepower from the left onto the benefits on the right.

Full Context Awareness	detection, blocking and remediation to protect the enterprise against targeted malware attacks
NGIPS	policy enforcement based on complete visibility of users and communication between virtual machines
AMP	real-time threat intelligence and security protection
Collective Security Intelligence	threat prevention and mitigation for known and unknown threats

Answer:

Explanation:

Full Context Awareness	NGIPS
NGIPS	Full Context Awareness
AMP	Collective Security Intelligence
Collective Security Intelligence	AMP

NEW QUESTION # 518

Which algorithm is an NGE hash function?

- A. SISHA-2
- B. SHA-1
- C. HMAC
- D. MD5

Answer: A

NEW QUESTION # 519

An organization recently installed a Cisco WSA and would like to take advantage of the AVC engine to allow the organization to create a policy to control application specific activity. After enabling the AVC engine, what must be done to implement this?

- A. Use security services to configure the traffic monitor, .
- B. Use an access policy group to configure application control settings.
- C. Use URL categorization to prevent the application traffic.
- D. Use web security reporting to validate engine functionality

Answer: B

Explanation:

The Application Visibility and Control (AVC) engine lets you create policies to control application activity on the network without having to fully understand the underlying technology of each application. You can configure application control settings in Access Policy groups. You can block or allow applications individually or according to application type. You can also apply controls to particular application types.

NEW QUESTION # 520
