Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q78-Q83):

NEW QUESTION # 78

Universal Containers (UC) creates a dataset, "Book11", containing a budget per region per month for the first 6 months of the year, as shown in the graphic below. Now, UC wants to create a lens showing the total budget for each region for each month. Every combination of region and month must be shown in the lens, even if there is no data.

How should a CRM Analytics consultant help UC build this lens?

- A. Use a "fill" statement in SAQL query with a "partition" parameter.
- **B. Use a "Compare Table" and add a column leveraging the "Running Total" function.**
- C. Use a "Compare Table" and use the "Show Totals" option.

Answer: B

NEW QUESTION # 79

Universal Containers has a dashboard for sales managers. They need to visualize the percentage of their opportunities in the pipeline in a Gauge chart. They want to customize the chart to keep track if they are below or beyond the target.

Which widget parameters should a consultant use?

- A. Reference Line, Angle, Range Values
- **B. Reference Line, Markers, Conditional Formatting**
- C. Range Values, Angle, Conditional Formatting

Answer: B

Explanation:

In the scenario described, the sales managers at Universal Containers require a Gauge chart that not only shows the current percentage of opportunities in their pipeline but also indicates whether they are below or beyond their set targets. The appropriate widget parameters to achieve this visualization in Salesforce CRM Analytics (formerly known as Einstein Analytics) are:

* Reference Line: This parameter is crucial for defining a specific target value on the gauge chart. It visually marks a point that represents the target goal, providing an immediate visual cue as to whether the current percentage is below or above this point.

* Markers: Markers are used to represent and highlight specific values on the gauge chart. They can be utilized to emphasize the current percentage level of the pipeline, making it instantly visible how close or far the current value is from the reference line or target.

* Conditional Formatting: This feature allows the chart to change color or style based on whether the current values meet, exceed, or fall below the target. It is a critical visual tool for quickly communicating performance against targets. Conditional formatting can be set to alter the appearance of the gauge's fill color based on whether the values are above, equal to, or below the reference line, thereby providing an intuitive visual representation of performance relative to targets.

The combination of these three parameters enables a highly effective visualization for sales managers to monitor their performance against key metrics and targets directly on their dashboards. This setup is aligned with Salesforce's best practices for creating meaningful and actionable insights within CRM dashboards, ensuring that users can easily interpret and react to the data presented. For more details on configuring these parameters, you can refer to Salesforce documentation and specific Trailhead modules that cover dashboard creation and customization:

* Wave Analytics Explorer

* Building Lenses, Dashboards, and Apps in CRM Analytics

These resources provide in-depth training and examples to help users effectively use Salesforce CRM Analytics for a wide range of data visualization needs.

NEW QUESTION # 80

Universal Containers' CRM Analytics team is building a dashboard with two widgets, and the queries use different datasets.

1. List widget associated to the query "Type_2" and grouped by the dimension "Type" (multi-selection)
2. Donut chart widget associated to the query "Query_pie_3" and grouped by the dimension "Type" The team wants any selection in the List widget to filter the Donut chart and vice versa. Users should be able to choose more than one Type (multi-selection).
What is the recommended way to accomplish the required filtering?

- A. Create a selection based Interaction and apply It to the query of "Query ple 3".
- B. Use "Connect Data Sources" to create a mapping of the two fields from the two datasets.
- **C. Set up a result and selection based interaction for each query.**

Answer: C

NEW QUESTION # 81

A CRM Analytics consultant is asked to make changes to the current sales dashboard at Cloud Kicks. The dashboard is crucial to track the daily sales performance of the company and needs to be available for other users while the consultant works on the changes.

How should the consultant proceed to update the dashboard?

- A. Clone the dashboard to a new one, apply the changes, share the new dashboard with the users, and delete the old one.
- **B. Self assign as a dashboard publisher and make the changes to the dashboard in draft mode while maintaining a previous version live.**
- C. Wait for a period of least usability or the dashboard to edit it.

Answer: B

NEW QUESTION # 82

A CRM Analytics consultant is building a dashboard for Cloud Kicks that is embedded in a separate Lightning page called "Management Dashboard" using a CRM Analytics Dashboard Component. The system administrator and the contract manager should both have access. The system administrator is able to see the dashboard and the data, but the contract manager sees a blank Lightning page.

What is causing the issue?

- **A. The consultant has set up component visibility for the dashboard for system administrators only.**
- B. The consultant has set up/enabled a 'Hide on Error' feature for the dashboard while embedding it.
- C. The consultant has set up a dashboard filter condition for data to be visible to system administrators only.

Answer: A

NEW QUESTION # 83
