## HPE Network Switching Associate Exam Sample Questions (Q45-Q50):

### NEW QUESTION # 45

- A. You can mesh multiple members together for redundancy.
- B. You can connect 10 VSF members in a ring topology.
- C. You can daisy-chain up to 10 VSF members.
- D. If you use a CX 6300 Series as the conductor, you can connect 3810 Series switches as members.
- E. The configuration of VSF may cause members to reboot.

**Answer: C,E**

#### NEW QUESTION # 46

What is the primary purpose of VSF configuration?

- A. To optimize network routing protocols
- B. To manage network devices remotely
- C. To combine multiple physical switches into a single virtual chassis
- D. To distribute network traffic across multiple physical switches

**Answer: C**

#### NEW QUESTION # 47

Which customer use case would be ideal for an HPE Aruba Networking Central On-Premises deployment?

- A. Customers who need a management platform maintained as SaaS
- B. Customers who have server resources hosted by hyperscalers
- C. Customers who need geographical redundancy for the management platform
- D. Customers that do not allow cloud connectivity

**Answer: D**

Explanation:

The correct answer is C. Customers that do not allow cloud connectivity. HPE Aruba Networking Central On-Premises is intended for organizations that need Aruba Central-style management capabilities but cannot or do not want to place management data in the public cloud. Official HPE Aruba Networking Central On-Premises documentation describes it as a variant of HPE Aruba Networking Central that is deployed in the customer's own environment, while the Validated Solution Guide states that Central On-Premises is appropriate when security requirements disallow Internet connectivity. This makes it suitable for organizations with strict regulatory, security, data sovereignty, or internal policy requirements that prevent cloud-managed network infrastructure. Option A is incorrect because using hyperscaler-hosted server resources does not, by itself, require Central On-Premises. Option B is incorrect because a SaaS-maintained management platform describes the cloud version of HPE Aruba Networking Central, not the on-premises deployment. Option D is not the best answer because geographical redundancy is not the primary use case described for choosing Central On-Premises.

#### NEW QUESTION # 48

A Network Technician is configuring an access layer switch (ALS) to connect to a core switch.

The connection uses two physical links that need to be bundled into a Link Aggregation Group (LAG) for increased bandwidth and redundancy. The LAG will function as a VLAN trunk to carry both Staff (VLAN 100) and Guest (VLAN 200) traffic. The technician must also enable RSTP for loop prevention.

Initial State:

- \* The switch is in its factory default state, connected via the console.
- \* The physical links are on ports 1/1/47 and 1/1/48.

Required Configuration:

- \* Create VLAN 100 and VLAN 200.
- \* Enable Rapid Spanning Tree Protocol (RSTP).
- \* Create LAG interface `lag 1`.
- \* Configure `lag 1` to use LACP (active mode).
- \* Add ports 1/1/47 and 1/1/48 to `lag 1`.
- \* Configure `lag 1` as a VLAN trunk, allowing VLANs 100 and 200.
- \* Enable the physical ports and the LAG interface.

Which configuration set correctly implements all the specified Layer 2 requirements?

#### NEW QUESTION # 49

A Solutions Architect is investigating a complex, intermittent issue in a multi-tier campus network.

Users are reporting that access to a critical internal application server (10.100.1.50) is periodically slow or times out. The network consists of multiple AOS-CX switches. The architect suspects a routing problem or a silent packet drop at one of the intermediate Layer 3 hops. The goal is to non-disruptively trace the path and identify the point of failure.

Which general troubleshooting tool should the architect use from the user's gateway switch to identify every Layer 3 hop on the path to the application server and measure the latency to each hop?

- A. `traceroute 10.100.1.50`
