While Snowflake Certified SnowPro Associate - Platform Certification (SOL-C01) exam preparing for the Snowflake Certified SnowPro Associate - Platform Certification (SOL-C01) exam, candidates have to pay extra money when Snowflake introduces new changes. With BraindumpsPass you can save money in this scenario as up to 365 days of free updates are available. You can also download a free demo to understand everything about BraindumpsPass SOL-C01 Exam Material before buying. While there are many SOL-C01 exam question preparation guides available online, it's crucial to be vigilant while making purchases due to the prevalence of online scams. BraindumpsPass offers Snowflake SOL-C01 exam questions for the best exam preparation experience.

In the era of rapid development in the IT industry, we have to look at those IT people with new eyes. They use their high-end technology to create many convenient place for us. And save a lot of manpower and material resources for the state and enterprises. And even reached unimaginable effect. Of course, their income must be very high. Do you want to be the kind of person? Do you envy them? Or you are also IT person, but you do not get this kind of success. Do not worry, BraindumpsPass's Snowflake SOL-C01 Exam Material can help you to get what you want. To select BraindumpsPass is equivalent to choose a success.

SOL-C01 Online Exam | Reliable Exam SOL-C01 Pass4sure

If you prefer to study by your mobile phone, our SOL-C01 study materials also can meet your demand, because our learning system can support all electronic equipment. You just need to download the online version of our SOL-C01 preparation questions, and you can use our products by any electronic equipment. We can promise that the online version will not let you down. We believe that you will benefit a lot from it if you buy our SOL-C01 Study Materials.

Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which SQL command is used to create a new SCHEMA in Snowflake? (Choose any 3 options)

- A. USE SCHEMA Schema_name;
- B. USE SCH Schema_name;

- C. CREATE SCHEMA Schema_name;
- D. CREATE SCH Schema_name;

Answer: C

Explanation:

The only valid Snowflake SQL command among the options for creating a schema is:

CREATE SCHEMA schema_name;

This command creates a schema within the currently active database. Optional modifiers like IF NOT EXISTS or OR REPLACE can be used to control behavior.

Other options:

- * USE SCHEMA switches to an existing schema; it does not create one.
- * USE SCH is invalid because SCH is not a Snowflake keyword.
- * CREATE SCH is invalid; SCH is not a valid abbreviation.

Thus, the only valid schema creation command is CREATE SCHEMA.

NEW QUESTION # 26

You are a data provider on the Snowflake Marketplace. You want to restrict access to specific rows in a shared table based on the consumer's account ID. Which of the following features in Snowflake can you use to accomplish this?

- A. External Tables with Custom Views
- B. Secure Data Sharing with Reader Accounts
- C. Dynamic Data Masking
- D. Data Masking policies
- E. Row-level security policies

Answer: E

Explanation:

Row-level security policies allow you to define policies that filter rows based on user or role attributes. In this scenario, you can create a policy that checks the account ID of the consumer and filters the rows accordingly. Data masking policies obscure data, but do not filter rows.

Reader accounts don't apply row level filtering. Dynamic data masking is for obscuring, and External tables are for external data sources not native sharing filtering.

NEW QUESTION # 27

You are loading data into a Snowflake table using the 'COPY INTO' command. The data is in JSON format, and one of the fields in the JSON data, 'timestamp_field', represents a Unix epoch timestamp in seconds. You need to convert this timestamp to a Snowflake timestamp data type during the loading process. Which of the following 'COPY INTO' statements would correctly perform this conversion?

- A.
- B.
- C.
- D.
- E.

Answer: A

Explanation:

The correct solution uses 'TO_TIMESTAMP' with the result of, 'timestamp_field' cast to NUMBER (since epoch time is a number). 'GET_PATH' returns a VARIANT, which needs to be explicitly cast to the correct data type before being passed to TO_TIMESTAMP. The cast converts the VARIANT to a numeric value. The other options either don't correctly cast the VARIANT or use an incorrect TO_TIMESTAMP function variation.

NEW QUESTION # 28

A Snowflake Notebook is configured to run a series of data processing steps on a schedule using the Snowflake Task feature. One of the steps involves calling an external API to enrich the data.

Due to network instability, the API calls occasionally fail, causing the entire task to fail. You want to implement error handling within the notebook to retry failed API calls up to a certain number of times before giving up. Assuming you are using Python within the Snowflake Notebook and Snowpark, how would you best implement this retry mechanism while ensuring minimal disruption to the notebook's workflow and preserving error information?

- A. Utilize the Snowflake Task's built-in error handling capabilities to automatically retry the task upon failure. Configure the task to retry a specific number of times with a specified delay between retries.
- **B. Use a dedicated Python library like 'tenacity' within the Snowflake Notebook. Configure 'tenacity' to retry the API call with exponential backoff and custom exception handling. Log all retry attempts and final error messages.**
- C. Implement a custom decorator function that handles retries. The decorator should catch exceptions from the API call, log the error, introduce a delay, and retry the API call until the maximum number of attempts is reached. Apply this decorator to the function containing the API call.
- D. Use the `snowflake.snowpark.functions.call_udf` function with the `'retry_count'` parameter set to the desired number of retries. This will automatically handle retries for IJDF calls within the notebook.
- E. Wrap the API call within a `'try...except'` block. Inside the `'except'` block, use `'time.sleep()'` to introduce a delay, and then recursively call the function containing the API call until the maximum number of retries is reached. If all retries fail, log the error and re-raise the exception.

Answer: B

Explanation:

Using a dedicated library like `'tenacity'` (E) provides the most robust and flexible retry mechanism.

It offers features like exponential backoff, customizable retry strategies, and detailed logging.

While `'try...except'` blocks (A) can work, they are less elegant and harder to maintain for complex retry logic. Snowflake does not have direct error handling mechanisms for external API calls (C, D) within notebooks. A decorator function (B) can work, but `'tenacity'` provides more features with less code.

NEW QUESTION # 29

What file extension is commonly used for Snowflake notebooks?

- A. .txt
- B. .ipnb
- C. .sql
- **D. .ipynb**

Answer: D

Explanation:

Snowflake notebooks use the `.ipynb` file extension, the standard format for Jupyter notebooks. This format stores executable code, markdown, metadata, and cell outputs in a structured JSON layout. Snowflake adopts this format to ensure compatibility with the broader Python ecosystem, thereby enabling seamless migration between Snowflake and external notebook environments.

The `.ipynb` structure allows mixed SQL and Python cells, visualizations, Streamlit components, documentation, and stepwise development within Snowsight. It supports reproducibility, collaboration, and integration with Snowpark and Cortex.

Incorrect formats:

* `.ipnb` is a misspelling and invalid.

* `.sql` is used for SQL scripts only.

* `.txt` cannot represent notebook metadata or cell structure.

Thus, `.ipynb` is the correct and only supported notebook format.

NEW QUESTION # 30

.....

You have an option to try the SOL-C01 exam dumps demo version and understand the full features before purchasing. You can download the full features of SOL-C01 PDF Questions and practice test software right after the payment. BraindumpsPass has created the three best formats of SOL-C01 practice questions. These Formats will help you to prepare for and pass the Snowflake SOL-C01 Exam. SOL-C01 pdf dumps format is the best way to quickly prepare for the SOL-C01 exam. You can open and use the Snowflake Certified SnowPro Associate - Platform Certification pdf questions file at any place. You don't need to install any software.
