## The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q90-Q95):

### NEW QUESTION # 90

Which of the following is a difference between an organization map and an organization chart?

- A. An organization map can be impacted by a business model change.
- B. An organization map is limited to formal relationships between business units.
- C. An organization map reduces the time, cost, and risk of business operations.
- D. An organization map highlights where in the organization that stakeholder concerns are not being addressed by a business architecture.**

### Answer: D

Explanation:

While both organization maps and organization charts visualize organizational structures, they have key differences:

\* **Organization Chart:** Focuses on formal reporting structures and hierarchies within an organization. It typically shows departments, roles, and lines of authority.

\* **Organization Map:** Provides a broader view of the organization, including relationships, interactions, and dependencies both within and outside the organization. It can highlight:

\* **Informal relationships:** Collaborations, communication channels, and networks that are not captured in the formal hierarchy.

\* **External relationships:** Connections with customers, suppliers, partners, and other stakeholders.

\* **Alignment with business architecture:** How well the organizational structure supports the business architecture and stakeholder concerns.

By visualizing these broader relationships, an organization map can reveal areas where the business architecture may not be effectively addressing stakeholder needs. This could be due to:

\* **Misalignment between structure and strategy:** The organizational structure may not be optimized to support the business strategy and value streams.

\* **Communication gaps:** There may be inadequate communication or coordination between different parts of the organization.

\* **Lack of clarity in roles and responsibilities:** Overlapping or unclear roles can lead to confusion and inefficiencies.

## NEW QUESTION # 91

Exhibit.

Consider the diagram of an architecture development cycle.

Select the correct phase names corresponding to the labels 1, 2 and 3?

- A. 1 Architecture Governance - 2 Implementation Governance - 3 Preliminary
- B. 1 Continuous Improvement - 2 Migration Planning - 3 Architecture Vision
- C. 1 Requirements Management - 2 Change Management - 3 Strategy
- D. 1 Requirements Management - 2 Implementation Governance - 3 Preliminary

**Answer: D**

Explanation:

The diagram of an architecture development cycle shows three phases of the TOGAF ADM. The correct phase names corresponding to the labels 1, 2 and 3 are Requirements Management, Implementation Governance, and Preliminary respectively. These phases are described as follows:

\* Requirements Management (label 1): This phase provides a process for managing architecture requirements throughout the ADM cycle. It ensures that requirements are captured, stored, prioritized, and addressed by relevant ADM phases. It also ensures that requirements are validated and updated as necessary.

\* Implementation Governance (label 2): This phase provides a process for ensuring that the implementation projects conform to the defined architecture. It involves establishing an implementation governance model, defining architecture contracts and compliance reviews, and monitoring and supporting the implementation projects.

\* Preliminary (label 3): This phase provides a process for preparing and planning the architecture project. It involves defining the scope and vision of the project, customizing the ADM process and content framework, defining principles and governance structures, and evaluating the enterprise architecture maturity and readiness.

## NEW QUESTION # 92

Consider the following statements:

Groups of countries, governments, or governmental organizations (such as militaries) working together to create common or shareable deliverables or infrastructures Partnerships and alliances of businesses working together, such as a consortium or supply chain. What are those examples of according to the TOGAF Standard?

- A. Architectures Scopes
- B. Business Units
- C. Organizations
- D. Enterprises

**Answer: D**

Explanation:

TOGAF defines an "Enterprise" as any collection of organizations or alliances working toward shared goals, such as in consortiums or partnerships. This scope allows the architecture to address cross-organization processes and infrastructures for collaborative endeavors.

Reference:

TOGAF defines an Enterprise as any collection of organizations that has a common set of goals. This definition is intentionally broad and can encompass various types of entities, including:

Single organizations: A traditional company or corporation with a unified structure and goals.

Groups of organizations: This could include:

Public sector: Government agencies, military branches, or international collaborations like the United Nations.

Private sector: Consortiums, industry alliances, supply chains, or joint ventures where multiple businesses work together towards shared objectives.

The key characteristic of an enterprise is the shared set of goals that drives its activities and architecture.

## NEW QUESTION # 93

What process turns a set of business capabilities into a structure that communicates the right amount of detail to different stakeholder groups?

- A. Layering
- B. Categorization

- C. Stratification
- D. Mapping

#### Answer: D

Explanation:

Mapping is the process that turns a set of business capabilities into a structure that communicates the right amount of detail to different stakeholder groups. Here's a detailed explanation:

Definition of Mapping:

Mapping: In the context of business architecture, mapping refers to the process of visually representing the relationships between business capabilities and other elements such as processes, value streams, and organizational units. This helps in communicating the structure and interactions within the business.

Purpose:

Communication: Mapping provides a clear and structured way to communicate the details of business capabilities to different stakeholder groups. It ensures that each group receives the appropriate level of detail needed for their role and decision-making.

Alignment: Helps in aligning business capabilities with strategic goals, processes, and organizational structure, ensuring that the architecture supports the overall business strategy.

TOGAF Reference:

Phase B: Business Architecture: During this phase, mapping is used to represent business capabilities and their relationships with other business elements. This helps in creating a coherent and comprehensive business architecture.

Capability Mapping: TOGAF emphasizes the use of capability mapping to understand and analyze how different capabilities support business processes and value streams.

Benefits:

Clarity and Understanding: Mapping provides a visual representation that enhances clarity and understanding of the business architecture. It helps stakeholders see the big picture and understand how different parts of the business fit together.

Stakeholder Engagement: By providing the right amount of detail to different stakeholders, mapping ensures effective engagement and collaboration across the organization.

In summary, mapping is the process that turns a set of business capabilities into a structure that communicates the right amount of detail to different stakeholder groups, facilitating clarity, understanding, and alignment.

#### NEW QUESTION # 94

In what TOGAF ADM phase should the architect locate existing architecture descriptions to create an information map?

- A. Preliminary Phase
- B. Phase E
- C. Phase A
- D. Phase B

#### Answer: C

Explanation:

In the TOGAF ADM cycle, Phase A, the Architecture Vision phase, is where the architect would locate existing architecture descriptions to create an information map. This phase involves understanding the strategic context for the architecture work, defining the scope, identifying stakeholders, creating the Architecture Vision, and obtaining approvals to proceed with the work. Part of this involves reviewing existing documentation to understand the current state of the architecture and the information that is already available, which would be useful for creating an information map.
