

# 2026 Updated Certification SAP-C02 Exam Dumps | 100% Free AWS Certified Solutions Architect - Professional (SAP-C02) Valid Study Notes

DOWNLOAD the newest Exam-Killer SAP-C02 PDF dumps from Cloud Storage for free: [https://drive.google.com/open?id=1udvTUqLlu\\_ZkWXSMWSnJXN\\_W7OHuVxP3](https://drive.google.com/open?id=1udvTUqLlu_ZkWXSMWSnJXN_W7OHuVxP3)

If you want to find the best SAP-C02 study materials, the first thing you need to do is to find a bank of questions that suits you. Our SAP-C02 learning material is prepared by experts in strict accordance with the exam outline of the SAP-C02 certification exam, whose main purpose is to help students to pass the exam with the least amount of time and effort. We can claim that if you study with our SAP-C02 Practice Engine for 20 to 30 hours, then you will be sure to pass the exam.

After clients pay successfully for our SAP-C02 guide torrent, they will receive our mails sent by our system in 5-10 minutes. Then they can click the mail and log in to use our software to learn immediately. For that time is extremely important for the learners, everybody hope that they can get the efficient learning. So clients can use our SAP-C02 Test Torrent immediately is the great merit of our SAP-C02 exam questions. When you begin to use, you can enjoy the various functions and benefits of our SAP-C02 practice guide such as it can simulate the exam and boosts the timing function.

## Amazon SAP-C02 Valid Study Notes & SAP-C02 Exam Exercise

Are you ready to accept this challenge and want to crack the AWS Certified Solutions Architect - Professional (SAP-C02) SAP-C02 certification exam? If your answer is yes then just get register for the SAP-C02 test and start preparation with Exam-Killer SAP-C02 PDF Questions and practice test software. All three SAP-C02 exam dumps formats are ready for download. Just download AWS Certified Solutions Architect - Professional (SAP-C02) SAP-C02 exam questions and start preparation right now.

## Amazon AWS Certified Solutions Architect - Professional (SAP-C02) Sample Questions (Q190-Q195):

NEW QUESTION # 190

A company owns a chain of travel agencies and is running an application in the AWS Cloud. Company employees use the application to search for information about travel destinations. Destination content is updated four times each year. Two fixed Amazon EC2 instances serve the application. The company uses an Amazon Route 53 public hosted zone with a multivalue record of travel.example.com that returns the Elastic IP addresses for the EC2 instances. The application uses Amazon DynamoDB as its primary data store. The company uses a self-hosted Redis instance as a caching solution. During content updates, the load on the EC2 instances and the caching solution increases drastically. This increased load has led to downtime on several occasions. A solutions architect must update the application so that the application is highly available and can handle the load that is generated by the content updates. Which solution will meet these requirements?

- A. Set up Amazon ElastiCache for Redis.  
Update the application to use ElastiCache.  
Create an Auto Scaling group for the EC2 instances.  
Create an Amazon CloudFront distribution, and set the Auto Scaling group as an origin for the distribution.  
Update the Route 53 record to use a simple routing policy that targets the CloudFront distribution's DNS alias.  
Manually scale up EC2 instances before the content updates.
- B. Set up Amazon ElastiCache for Memcached.  
Update the application to use ElastiCache.  
Create an Auto Scaling group for the EC2 instances.  
Create an Application Load Balancer (ALB).  
Set the Auto Scaling group as a target for the ALB.  
Update the Route 53 record to use a simple routing policy that targets the ALB's DNS alias.  
Configure scheduled scaling for the application before the content updates.
- C. Set up DynamoDB Accelerator (DAX) as in-memory cache.  
Update the application to use DAX.  
Create an Auto Scaling group for the EC2 instances.  
Create an Amazon CloudFront distribution, and set the Auto Scaling group as an origin for the distribution.  
Update the Route 53 record to use a simple routing policy that targets the CloudFront distribution's DNS alias.  
Manually scale up EC2 instances before the content updates.
- **D. Set up DynamoDB Accelerator (DAX) as in-memory cache.**  
**Update the application to use DAX.**  
**Create an Auto Scaling group for the EC2 instances.**  
**Create an Application Load Balancer (ALB).**  
**Set the Auto Scaling group as a target for the ALB.**  
**Update the Route 53 record to use a simple routing policy that targets the ALB's DNS alias.**  
**Configure scheduled scaling for the EC2 instances before the content updates.**

**Answer: D**

Explanation:

DynamoDB Accelerator (DAX) is a fully managed, custom cache for DynamoDB. ElastiCache supports both Redis and Memcached and typically used to cache results from relational databases.

<https://aws.amazon.com/dynamodb/dax/>

## NEW QUESTION # 191

A company is running several workloads in a single AWS account. A new company policy states that engineers can provision only approved resources and that engineers must use AWS CloudFormation to provision these resources. A solutions architect needs to create a solution to enforce the new restriction on the IAM role that the engineers use for access.

What should the solutions architect do to create the solution?

- **A. Update the IAM policy for the engineers' IAM role with permissions to only allow AWS CloudFormation actions. Create a new IAM policy with permission to provision approved resources, and assign the policy to a new IAM service role. Assign the IAM service role to AWS CloudFormation during stack creation.**
- B. Provision resources in AWS CloudFormation stacks. Update the IAM policy for the engineers' IAM role to only allow access to their own AWS CloudFormation stack.
- C. Update the IAM policy for the engineers' IAM role with permissions to only allow provisioning of approved resources and AWS CloudFormation. Use AWS CloudFormation templates to create stacks with approved resources.
- D. Upload AWS CloudFormation templates that contain approved resources to an Amazon S3 bucket.  
Update the IAM policy for the engineers' IAM role to only allow access to Amazon S3 and AWS CloudFormation. Use AWS CloudFormation templates to provision resources.

**Answer: A**

Explanation:

Explanation

<https://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/security-best-practices.html#use-iam-to-co>

<https://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/using-iam-servicerole.html>

### NEW QUESTION # 192

A company is running a web application in a VPC. The web application runs on a group of Amazon EC2 instances behind an Application Load Balancer (ALB). The ALB is using AWS WAF.

An external customer needs to connect to the web application. The company must provide IP addresses to all external customers. Which solution will meet these requirements with the LEAST operational overhead?

- **A. Create an AWS Global Accelerator standard accelerator. Specify the ALB as the accelerator's endpoint. Provide the accelerator's IP addresses to the customer.**
- B. Configure an Amazon CloudFront distribution. Set the ALB as the origin. Ping the distribution's DNS name to determine the distribution's public IP address. Provide the IP address to the customer.
- C. Allocate an Elastic IP address. Assign the Elastic IP address to the ALB. Provide the Elastic IP address to the customer.
- D. Replace the ALB with a Network Load Balancer (NLB). Assign an Elastic IP address to the NLB.

**Answer: A**

Explanation:

<https://docs.aws.amazon.com/global-accelerator/latest/dg/about-accelerators.alb-accelerator.html> Option A is wrong. AWS WAF does not support associating with NLB. <https://docs.aws.amazon.com/waf/latest/developerguide/waf-chapter.html> Option B is wrong. An ALB does not support an Elastic IP address. <https://aws.amazon.com/elasticloadbalancing/features/>

### NEW QUESTION # 193

A company has a few AWS accounts for development and wants to move its production application to AWS.

The company needs to enforce Amazon Elastic Block Store (Amazon EBS) encryption at rest current production accounts and future production accounts only. The company needs a solution that includes built-in blueprints and guardrails.

Which combination of steps will meet these requirements? (Choose three.)

- **A. Invite existing accounts to join the organization in AWS Organizations. Create SCPs to ensure compliance.**
- **B. Create a new AWS Control Tower landing zone in the company's management account. Add production and development accounts to production and development OUs, respectively.**
- **C. Create a guardrail for the production OU to detect EBS encryption.**
- D. Create a new AWS Control Tower landing zone in an existing developer account. Create OUs for accounts. Add production and development accounts to production and development OUs, respectively.
- E. Use AWS CloudFormation StackSets to deploy AWS Config rules on production accounts.
- F. Create a guardrail from the management account to detect EBS encryption.

**Answer: A,B,C**

Explanation:

<https://docs.aws.amazon.com/controltower/latest/userguide/controls.html> <https://docs.aws.amazon.com/controltower/latest/userguide/strongly-recommended-controls.html#ebs-enable-encryption>

AWS is now transitioning the previous term 'guardrail' new term 'control'.

### NEW QUESTION # 194

A company plans to deploy a new private intranet service on Amazon EC2 instances inside a VPC. An AWS Site-to-Site VPN connects the VPC to the company's on-premises network. The new service must communicate with existing on-premises services. The on-premises services are accessible through the use of hostnames that reside in the company.example DNS zone. This DNS zone is wholly hosted on premises and is available only on the company's private network.

A solutions architect must ensure that the new service can resolve hostnames on the company example domain to integrate with existing services.

Which solution meets these requirements?

- A. Use AWS Systems Manager to configure a run document that will install a hosts file that contains any required hostnames. Use an Amazon EventBridge (Amazon CloudWatch Events) rule to run the document when an instance is entering the running state.
- B. Turn on DNS hostnames for the VPC.  
Configure a new inbound resolver endpoint with Amazon Route 53 Resolver.  
Configure the on-premises DNS server to forward requests for company.example to the new resolver.
- C. Create an empty private zone in Amazon Route 53 for company.example.  
Add an additional NS record to the company's on-premises company.example zone that points to the authoritative name servers for the new private zone in Route 53.
- D. Turn on DNS hostnames for the VPC.  
Configure a new outbound endpoint with Amazon Route 53 Resolver.  
Create a Resolver rule to forward requests for company.example to the on-premises name servers.

**Answer: D**

Explanation:

Outbound endpoint: Resolver conditionally forwards queries to resolvers on your network via this endpoint.  
<https://docs.aws.amazon.com/Route53/latest/DeveloperGuide/resolver.html>

## NEW QUESTION # 195

.....

In order to provide the most effective SAP-C02 exam materials which cover all of the current events for our customers, a group of experts in our company always keep an close eye on the changes of the SAP-C02 exam, and then will compile all of the new key points as well as the latest types of exam questions into the new version of our SAP-C02 training engine. Do not lose the wonderful chance to advance with times. Just come and have a try on our SAP-C02 study questions!

**SAP-C02 Valid Study Notes:** <https://www.exam-killer.com/SAP-C02-valid-questions.html>

With the high-effective SAP-C02 exam questions, we can claim that you can attend the exam and pass it after you focus on them for 20 to 30 hours, Exam-Killer SAP-C02 PDF is designed with the help of updated exam content, Amazon Certification SAP-C02 Exam Dumps Simulate & Interactive test (in Test Engine format), Amazon Certification SAP-C02 Exam Dumps As long as you are familiar with the review materials, passing exam won't be a problem.

I've never heard it put so succinctly and clearly, Unless explicitly silenced, With the high-effective SAP-C02 Exam Questions, we can claim that you can attend the exam and pass it after you focus on them for 20 to 30 hours.

## Amazon SAP-C02 the latest exam questions and answers free download

Exam-Killer SAP-C02 PDF is designed with the help of updated exam content, Simulate & Interactive test (in Test Engine format), As long as you are familiar with the review materials, passing exam won't be a problem.

So you need to be brave enough to have a try.
