Cisco Implementing Cisco Data Center Core Technologies (350-601 DCCOR) Sample Questions (Q336-Q341):

NEW QUESTION # 336

Which two configuration settings are available in the in the cisco UCS firmware Auto sync server policy?

- A. Delayed Action
- B. User Acknowledge
- C. No Action
- D. User Notification
- E. Immediate action

Answer: B,C

NEW QUESTION # 337

Drag and drop the storage technologies from the left onto the correct descriptions on the right.

Answer:

Explanation:

NEW QUESTION # 338

An engineer is configuring a vHBA template in UCS Manager. The engineer needs to specify the logical addresses used by the vHBA and the path through which the SAN traffic flows. Which two resources must be specified in the vHBA template? (Choose two.)

- A. VLAN ID
- B. WWNN
- C. Fabric ID
- D. MAC addresses
- E. WWPNPool

Answer: C,E

Explanation:

When configuring a vHBA template in UCS Manager, you need to specify the WWPN (World Wide Port Name) from a WWPN pool (B) to uniquely identify the port in the fabric, and the Fabric ID (E) to define the path through which the SAN traffic will flow. https://www.cisco.com/c/en/us/products/collateral/servers-unified-computing/ucs-manager/whitepaper_c11-6973

NEW QUESTION # 339

Refer to the exhibit. An engineer configures port security on a Cisco Nexus 9000 Series Switch.

The requirement is to prevent any newly learned MAC addresses from forwarding traffic on the interface. Also, the already learned MAC addresses must not be affected by the changes.

Which configuration meets these requirements?

- A. switchport port-security violation isolate
- B. switchport port-security violation shutdown
- C. switchport port-security violation restrict
- D. switchport port-security violation protect

Answer: C

NEW QUESTION # 340

After a Cisco Nexus 7000 Series Switch chassis replacement, the administrator discovers that all vPC-enabled LACP port channels are reinitialized. The administrator wants to prevent this issue the next time the chassis is replaced. Which two actions must be taken to meet this requirement before the isolated device is reloaded? (Choose two)

- A. Change the vPC system-priority of the replacement chassis to a lower value than the peer.
- B. Configure auto-recovery to the disable state on both peers
- C. Set the vPC MAC address to a tower value than the peer

- Answer: B,D**
