

# Exam CCDAK Question | CCDAK Exam Preview

DOWNLOAD the newest FreeCram CCDAK PDF dumps from Cloud Storage for free: [https://drive.google.com/open?id=1XBj\\_xhCjAgWKJnM7v0c0Q8dB\\_Db8hBKy](https://drive.google.com/open?id=1XBj_xhCjAgWKJnM7v0c0Q8dB_Db8hBKy)

In order to meet different needs for candidates, we offer you three versions for CCDAK exam cram, and you can choose the one you like. CCDAK PDF version is printable, and you can print them into hard one if you like, you can learn them anywhere and anytime. CCDAK Soft test engine can simulate the real exam environment, so that you can know the process of the exam, and your confidence will be strengthened. CCDAK Online Test engine support Android and iOS etc. You can have a general review since this version has testing history and performance review. All three versions have free update for one year, and the update version will be sent to you automatically.

The CCDAK Certification Exam is a valuable credential for developers who work with Kafka. It not only validates their knowledge and skills but also enhances their career opportunities. The CCDAK certification is recognized by the industry and can help developers stand out in the job market. By investing time and effort in preparing for the CCDAK certification exam, developers can take their Kafka expertise to the next level.

The CCDAK certification exam is a globally recognized certification for Kafka developers, offered by Confluent. CCDAK exam is designed to test developers' knowledge and skills in building and managing Kafka clusters and writing efficient Kafka applications. Confluent Certified Developer for Apache Kafka Certification Examination certification is ideal for developers who want to demonstrate their expertise in Apache Kafka and advance their careers in this field. Confluent Certified Developer for Apache Kafka Certification Examination certification is also beneficial for organizations that use Kafka in their infrastructure, as it ensures that their developers have the necessary skills to build and manage Kafka applications.

## Confluent CCDAK Dumps PDF To Gain Brilliant Result (2026)

As is known to us, a suitable learning plan is very important for all people. For the sake of more competitive, it is very necessary for you to make a learning plan. We believe that our CCDAK actual exam will help you make a good learning plan. You can have a model test in limited time by our CCDAK Study Materials, if you finish the model test, our system will generate a report according to your performance. You can know what knowledge points you do not master. By the report from our CCDAK study questions. Then it will be very easy for you to pass the CCDAK exam.

The CCDAK Certification Exam is a comprehensive test that covers a wide range of topics related to Kafka, including its architecture, fundamental concepts, and practical implementation techniques. CCDAK exam is designed to assess the candidate's ability to create robust and scalable Kafka applications that can handle large volumes of data in real-time. It also evaluates the candidate's knowledge of Kafka Connect, Kafka Streams, Schema Registry, and other related technologies.

## Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q22-Q27):

### NEW QUESTION # 22

Your producer is producing at a very high rate and the batches are completely full each time. How can you improve the producer

throughput? (select two)

- A. Decrease linger.ms
- B. Disable compression
- C. Decrease batch.size
- **D. Increase batch.size**
- **E. Enable compression**

**Answer: D,E**

Explanation:

Increase linger.ms

Explanation:

batch.size controls how many bytes of data to collect before sending messages to the Kafka broker. Set this as high as possible, without exceeding available memory. Enabling compression can also help make more compact batches and increase the throughput of your producer. Linger.ms will have no effect as the batches are already full

### NEW QUESTION # 23

You create a topic named stream-logs with:

\* A replication factor of 3

\* Four partitions

\* Messages that are plain logs without a key How will messages be distributed across partitions?

- A. The first message will always be written to partition 0.
- **B. Messages will be distributed round-robin among all the topic partitions.**
- C. All messages will be written to the same log segment.
- D. Messages will be distributed among all the topic partitions with strict ordering.

**Answer: B**

Explanation:

If a message key is not provided, Kafka's default partitioner uses round-robin distribution across available partitions.

From Kafka Producer Design:

"If no key is provided, the default partitioner distributes messages round-robin to available partitions."

\* A is incorrect - not all go to partition 0.

\* C is invalid - Kafka doesn't group messages into one segment without a key.

\* D is false - ordering is not preserved across partitions without a key.

Reference: Kafka Producer Partitioner Behavior

### NEW QUESTION # 24

The producer code below features a Callback class with a method called onCompletion().

In the onCompletion() method, when the request is completed successfully, what does the value metadata.offset() represent?

- A. Its position in the producer's batch of messages
- B. The ID of the partition to which the message was committed
- C. The number of bytes that overflowed beyond a producer batch of messages
- **D. The sequential ID of the message committed into a partition**

**Answer: D**

Explanation:

The offset in the RecordMetadata object returned by the producer represents the position of the record in the partition- i.e., the sequential ID assigned by Kafka once the message is committed.

From Kafka Producer API Documentation:

"The offset is the position of the record in the partition. This is a unique, sequential number assigned by the broker."

\* D refers to metadata.partition(), not offset().

\* B and C are unrelated to how Kafka handles committed offsets.

Reference: Kafka Producer Java API > RecordMetadata

### NEW QUESTION # 25

You need to set alerts on key broker metrics to trigger notifications when the cluster is unhealthy. Which are three minimum broker metrics to monitor? (Select three.)

- A. kafka.controller:type=KafkaController,name=OfflinePartitionsCount
- B. kafka.controller:type=KafkaController,name=TopicsToDeleteCount
- C. kafka.controller:type=KafkaController,name=ActiveControllerCount
- D. kafka.controller:type=ControllerStats,name=UncleanLeaderElectionsPerSec
- E. kafka.controller:type=KafkaController,name=LastCommittedRecordOffset

**Answer: A,C,D**

Explanation:

These three metrics are critical for cluster health:

- \* OfflinePartitionsCount: Indicates partitions without active leaders - a sign of broker failure.
- \* ActiveControllerCount: There should be exactly one active controller. A count # 1 signals controller failure.
- \* UncleanLeaderElectionsPerSec: Tracks leader elections where out-of-sync replicas were selected - risky for data loss.

From Kafka Monitoring Documentation:

"Offline partitions and unclean leader elections should trigger alerts. Also, ensure a single active controller is running."

- \* A is about topics pending deletion - not critical.
- \* E is a per-topic record metric, not broker-level.

Reference: Kafka Monitoring > Key JMX Metrics

### NEW QUESTION # 26

In Avro, removing a field that does not have a default is a \_\_ schema evolution

- A. breaking
- B. full
- C. forward
- D. backward

**Answer: D**

Explanation:

Clients with new schema will be able to read records saved with old schema.

### NEW QUESTION # 27
