

信頼的な1Z0-1072-25対応問題集一回合格-高品質な1Z0-1072-25的中合格問題集

P.S. JpshikenがGoogle Driveで共有している無料かつ新しい1Z0-1072-25ダンプ： <https://drive.google.com/open?id=1rY01NUAdpymCWUqBQH8k6ZMSMj4n2xSw>

Jpshiken製品を購入する前に1Z0-1072-25学習ツールの無料ダウンロードと試用を提供し、製品のデモを提供して、クライアントに製品を完全に知らせます。Webサイトの1Z0-1072-25テストトレントのページにアクセスすると、1Z0-1072-25ガイドトレントの特性とメリットを知ることができます。Webサイトの製品のページでは、詳細と保証、連絡方法、1Z0-1072-25テストトレントでのクライアントの評価、および1Z0-1072-25試験問題に関するその他の情報を見つけることができます。とても便利です。

Oracle 1Z0-1072-25 認定試験の出題範囲：

トピック	出題範囲
トピック 1	- Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block - File - Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.
トピック 2	Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.

トピック 3	Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources
トピック 4	- Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN - FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.

素晴らしい1Z0-1072-25 | 有効的な1Z0-1072-25対応問題集試験 | 試験の準備方法Oracle Cloud Infrastructure 2025 Architect Associate的中合格問題集

高質のOracle試験資料を持って、短い時間で気軽に試験に合格したいですか？ そうしたら、我が社Jpshikenの1Z0-1072-25問題集をご覧ください。我々1Z0-1072-25資料はIT認定試験の改革に準じて更新していますから、お客様は改革での問題変更に心配するは全然ありません。お客様が購入する前、我が社Jpshikenの1Z0-1072-25問題集の見本を無料でダウンロードできます。

Oracle Cloud Infrastructure 2025 Architect Associate 認定 1Z0-1072-25 試験問題 (Q31-Q36):

質問 # 31

Which IAM Identity Domain type should you create for a full-featured Identity-as-a-Service (IDaaS) solution?

- A. External User
- **B. Premium**
- C. Oracle Apps Premium
- D. Free

正解: B

解説:

In Oracle Cloud Infrastructure (OCI), when you need a full-featured Identity-as-a-Service (IDaaS) solution, the appropriate Identity Domain type to create is Premium.

Premium Identity Domain: This option provides a comprehensive set of identity and access management (IAM) capabilities, including advanced security features, identity governance, and support for enterprise-grade integrations. It supports managing user identities, multifactor authentication, and various other identity services required for a robust IDaaS solution.

Other Options:

External User: This is a limited domain type typically used for managing users who only need access to specific external services.

Free: This domain type offers limited features and is not intended for full-featured enterprise IAM requirements.

Oracle Apps Premium: This is tailored for integrating with Oracle applications but does not offer the broad capabilities of the Premium option.

Relevant OCI Documentation:

Oracle Identity Domains Overview

This documentation explains the various identity domain types and their use cases within OCI.

質問 # 32

What is the primary function of the Network Path Analyzer (NPA) tool provided by Oracle Cloud Infrastructure (OCI)?

- **A. Collecting and analyzing network configuration to identify virtual network configuration issues impacting connectivity**
- B. Sending actual traffic between source and destination to diagnose connectivity issues

- C. Providing real-time monitoring of network traffic to detect security threats and unauthorized access attempts
- D. Optimizing network performance by dynamically adjusting routing paths based on traffic patterns

正解: A

解説:

The primary function of the Network Path Analyzer (NPA) tool in Oracle Cloud Infrastructure (OCI) is to help users troubleshoot and diagnose network connectivity issues by analyzing the network path between a source and a destination within OCI. The tool collects and analyzes the configuration of the virtual network, identifying any misconfigurations or issues that might impact connectivity.

NPA Usage: The Network Path Analyzer allows administrators to trace the network path and check for issues such as incorrect security list rules, route table misconfigurations, or any other factors that could prevent network traffic from reaching its destination.

質問 # 33

Which statement is true about pre-authenticated requests?

- A. Deleting a pre-authenticated request does not revoke access.
- B. Pre-authenticated requests can be used to delete buckets.
- C. You cannot edit a pre-authenticated request.
- D. You need to provide your OCI credentials to the partner company.

正解: C

解説:

In Oracle Cloud Infrastructure (OCI), pre-authenticated requests (PARs) allow users to grant access to specific objects in Object Storage without requiring the recipient to have an OCI account or credentials. This feature is useful for sharing objects securely without exposing broader access.

Cannot Edit a PAR: Once a pre-authenticated request is created, you cannot edit it. If you need to change the settings, such as the expiration date or the object being shared, you must delete the existing PAR and create a new one.

Other Statements:

Deleting a PAR does indeed revoke access immediately, contradicting option B.

Providing OCI credentials (C) is not required for using PARs. The purpose of PARs is to avoid sharing credentials.

Deleting Buckets (D): PARs are designed for accessing objects, not for administrative actions like deleting buckets.

Relevant OCI Documentation:

Managing Pre-Authenticated Requests

This reference outlines the features and limitations of pre-authenticated requests, including the inability to edit them once created.

質問 # 34

Which Oracle Cloud Infrastructure (OCI) Identity and Access Management (IAM) policy is invalid?

- A. Allow dynamic-group 'Default'/FrontEnd' to manage instance-family in compartment Project-A
- B. Allow group 'Default'/A-Developers' to create volumes in compartment Project-A
- C. Allow any-user to inspect users in tenancy
- D. Allow group 'Default'/A-Admins' to manage all-resources in compartment Project-A

正解: C

解説:

In Oracle Cloud Infrastructure (OCI), Identity and Access Management (IAM) policies are used to control access to resources. The policy in option C is invalid because "any-user" is not a valid principal in OCI IAM policies. OCI policies can only grant permissions to groups or dynamic groups, but not to arbitrary users.

Here's an explanation for each option:

A . Allow dynamic-group 'Default'/FrontEnd' to manage instance-family in compartment Project-A: This is valid. It grants the dynamic group 'FrontEnd' the ability to manage instances within the Project-A compartment.

B . Allow group 'Default'/A-Admins' to manage all-resources in compartment Project-A: This is valid. It provides full administrative access to all resources in the Project-A compartment for the 'A-Admins' group.

C . Allow any-user to inspect users in tenancy: This is invalid because OCI does not allow the use of "any-user" in policies. You

OCI Policy Reference

正解： C
