

Salesforce Analytics-Admn-201 Questions Tips To Pass Exam [2026]

P.S. Free & New Analytics-Admn-201 dumps are available on Google Drive shared by FreeCram: <https://drive.google.com/open?id=1KExN5AGQj446y3boq7v1-cUbkdU4qCTJ>

To advance your career, take the Salesforce Certified Tableau Server Administrator exam. Your Salesforce demonstrates your commitment to lifelong learning. Passing the Salesforce Certified Tableau Server Administrator exam in one sitting is not a walk in the park. The Salesforce Analytics-Admn-201 exam preparation process takes a lot of time and effort. You have to put time and money into passing the Salesforce Certified Tableau Server Administrator exam. The best method to reap the rewards of your investment in becoming an expert is by using Salesforce Analytics-Admn-201 Exam Questions. Additionally, you can confidently study for the Analytics-Admn-201 exam. Passing an Salesforce Certified Tableau Server Administrator exam on the first attempt can be stressful, but Salesforce Analytics-Admn-201 exam questions can help manage stress and allow you to perform at your best.

In the era of information, everything around us is changing all the time, so do the Analytics-Admn-201 exam. But you don't need to worry it. We take our candidates' future into consideration and pay attention to the development of our Salesforce Certified Tableau Server Administrator study training dumps constantly. Free renewal is provided for you for one year after purchase, so the Analytics-Admn-201 Latest Questions won't be outdated. The latest Analytics-Admn-201 latest questions will be sent to you email, so please check then, and just feel free to contact with us if you have any problem. Our reliable Analytics-Admn-201 exam material will help pass the exam smoothly.

Exam Analytics-Admn-201 Exercise & Analytics-Admn-201 Valid Exam Sample

As long as you get to know our Analytics-Admn-201 exam questions, you will figure out that we have set an easier operation system for our candidates. Once you have a try, you can feel that the natural and seamless user interfaces of our Analytics-Admn-201 study materials have grown to be more fluent and we have revised and updated Analytics-Admn-201 Study Materials according to the latest development situation. In the guidance of teaching syllabus as well as theory and practice, our Analytics-Admn-201 training guide has achieved high-quality exam materials according to the tendency in the industry.

Salesforce Certified Tableau Server Administrator Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which Tableau Server process performs the role of a database for metadata?

- A. File Store
- B. Data Engine
- C. Backgrounder
- D. Repository

Answer: D

Explanation:

Tableau Server relies on several processes to function, each with a specific role. The Repository process (powered by PostgreSQL) serves as the database for metadata, storing critical information such as:

- * User and group details.
 - * Permissions and site configurations.
 - * Workbook and data source metadata (e.g., schedules, subscriptions).
 - * Option B (Repository): Correct. The Repository is the centralized database that holds all metadata, making it the backbone of Tableau Server's content management. There are typically two instances in an HA setup (one active, one passive), monitored by the Cluster Controller.
 - * Option A (Data Engine): Incorrect. The Data Engine manages in-memory data processing and extract storage (e.g., .hyper files), not metadata. It's separate from the Repository.
 - * Option C (Backgrounder): Incorrect. The Backgrounder handles background tasks like extract refreshes and subscriptions, but it doesn't store metadata-it interacts with the Repository to retrieve task details.
 - * Option D (File Store): Incorrect. The File Store manages physical extract files and workbook assets, not metadata, which is stored in the Repository.
- Reference: Tableau Server Documentation - "Tableau Server Processes" (<https://help.tableau.com/current/server/en-us/processes.htm>).

NEW QUESTION # 45

A user published a workbook ten days ago. The user can see the workbook on the Server, but she is unable to find the workbook by using Search. What should you do to resolve the problem?

- A. Instruct the user to log out, and then log back in
- B. Instruct the user to add tags to the workbook
- C. Instruct the user to re-publish the workbook with keywords
- **D. Run the tsm maintenance reindex-search command**

Answer: D

Explanation:

Tableau Server's search functionality relies on an indexed catalog of content (workbooks, data sources, etc.) stored in the Repository. If a user can see a workbook in the UI (e.g., under Content > Workbooks) but not find it via search, the search index may be outdated or corrupted. This can happen due to:

- * Indexing delays after publishing.
 - * Server maintenance or crashes affecting the index.
 - * Option D (Run the tsm maintenance reindex-search command): Correct. This command rebuilds the search index, ensuring all content (including the user's workbook) is properly cataloged and searchable. Steps:
 - * Stop Tableau Server (tsm stop).
 - * Run tsm maintenance reindex-search.
 - * Start Tableau Server (tsm start). This is a server administrator task and resolves systemic search issues.
 - * Option A (Re-publish the workbook with keywords): Incorrect. Re-publishing might update the index for that workbook, but it doesn't fix a broader indexing problem. Keywords enhance relevance, not indexing itself.
 - * Option B (Add tags to the workbook): Incorrect. Tags improve searchability but don't address an index failure. If the workbook isn't indexed, tags won't help.
 - * Option C (Log out, and then log back in): Incorrect. This refreshes the user session but doesn't affect the server-side search index.
- Why This Matters: A reliable search index is critical for content discovery in large deployments-reindex-search ensures consistency.
- Reference: Tableau Server Documentation - "Reindex Search" (https://help.tableau.com/current/server/en-us/cli_maintenance_tsm.htm#reindex-search).

NEW QUESTION # 46

You are the server administrator of a single-node Tableau Server installation. The server hosts five schedules that each execute once a day: Weekday 3:00 PM Extract Refresh, Weekday 5:00 PM Subscription, Weekday 2:00 AM Extract Refresh, Weekday 7:00 AM Extract Refresh, and Weekday 8:00 AM Subscription. The schedules are scheduled to execute during periods when Tableau Server is least active. The busiest period for your server is immediately after the workday begins at 9:00 AM. The office of the CEO reports that every morning at 9:00 AM, they access the views in a particular workbook. The data for these views is refreshed by a task associated with the 7:00 AM schedule. The CEO reports that the data in the views is only being refreshed about 70% of the time. What should you do to attempt to resolve the CEO's problem?

- A. Set the priority of this task to 100
- B. Set the priority for all other tasks to 50
- **C. Set the priority of this task to 1**

- D. Set the default priority of this schedule to 50

Answer: C

Explanation:

In Tableau Server, schedules manage tasks like extract refreshes and subscriptions. Each task within a schedule has a priority value (ranging from 1 to 100, where 1 is the highest priority and 100 is the lowest).

Tasks with higher priority (lower numbers) are executed before tasks with lower priority (higher numbers) when queued by the Background process. If the Background process is overloaded or delayed, lower-priority tasks may not complete on time, leading to inconsistent refreshes.

In this scenario:

The 7:00 AM Extract Refresh task is critical for the CEO's workbook, but the data is only refreshed 70% of the time by 9:00 AM. The server has a single node, meaning a single Background process handles all tasks. With five schedules (some overlapping in the early morning), contention or delays could prevent the 7:00 AM task from completing reliably before 9:00 AM.

Option C (Set the priority of this task to 1): Correct. Setting the task priority to 1 ensures it has the highest priority among all queued tasks. This increases the likelihood that the Background process executes it promptly at 7:

00 AM, completing the refresh before the CEO accesses the workbook at 9:00 AM. You can adjust task priority in the Tableau Server web interface under Schedules > Tasks > Edit Priority.

Option A (Set the default priority of this schedule to 50): Incorrect. The default priority for schedules is already 50, and this option refers to the schedule's default, not the specific task. It wouldn't address the contention issue.

Option B (Set the priority for all other tasks to 50): Incorrect. This keeps all tasks at the default priority (50), leaving the 7:00 AM task without a relative advantage. It doesn't prioritize the CEO's task.

Option D (Set the priority of this task to 100): Incorrect. Priority 100 is the lowest, which would deprioritize the task, making the refresh even less reliable.

Reference: Tableau Server Documentation - "Manage Schedules and Tasks" (https://help.tableau.com/current/server/en-us/schedule_manage.htm).

NEW QUESTION # 47

Which three types of authentications can you use to implement single-sign-on (SSO) authentication to Tableau Server? (Choose three.)

- A. OpenID Connect
- B. Kerberos with Active Directory
- C. Local Authentication
- D. Security Assertion Markup Language (SAML)

Answer: A,B,D

Explanation:

Single Sign-On (SSO) allows users to authenticate once (e.g., via a corporate identity provider) and access Tableau Server without re-entering credentials. Tableau Server supports several SSO methods:

* OpenID Connect (OIDC): An OAuth 2.0-based protocol for SSO, configured via Tableau's SAML settings with an OIDC-compatible IdP (e.g., Google, Okta).

* Kerberos with Active Directory: A ticket-based SSO protocol, widely used in Windows environments with AD integration.

* SAML: A flexible SSO standard using XML assertions, supporting various IdPs (e.g., ADFS, PingFederate).

Let's evaluate:

* Option A (OpenID Connect): Correct. OIDC is an SSO method, implemented as a SAML variant in Tableau Server, enabling seamless login.

* Option C (Kerberos with Active Directory): Correct. Kerberos provides SSO in AD environments, delegating authentication to the domain controller.

* Option D (Security Assertion Markup Language - SAML): Correct. SAML is a core SSO method in Tableau, widely adopted for enterprise integrations.

* Option B (Local Authentication): Incorrect. Local Authentication uses Tableau's internal user database, requiring manual credential entry-no SSO support.

Why This Matters: SSO enhances user experience and security by leveraging existing identity systems, reducing password fatigue.

Reference: Tableau Server Documentation - "Authentication" (https://help.tableau.com/current/server/en-us/auth_overview.htm).

NEW QUESTION # 48

Which two options can be configured by a server administrator per site? (Choose two.)

- A. Limitation on storage space
- B. Language and locale
- C. Ability to embed credentials
- D. Limitation on number of users

Answer: A,B

Explanation:

Tableau Server supports multi-tenancy via sites, each with customizable settings managed by server or site administrators. Let's analyze what's configurable per site:

* Site Settings: Found in the web UI under Site > Settings > General. Server admins can override site admin settings.

* Option B (Limitation on storage space): Correct.

* Details: Server admins can set a storage quota per site (e.g., 100 GB) to cap disk usage for extracts and workbooks.

* How: In TSM or site settings (if enabled)-e.g., tsm configuration set -k site.storage.quota -v 100000.

* Impact: Prevents one site from monopolizing resources in multi-site deployments.

* Option D (Language and locale): Correct.

* Details: Each site can set its language (e.g., English, French) and locale (e.g., date/number formats).

* How: Site settings UI-e.g., "Language: French, Locale: France."

* Impact: Tailors the user experience per site's audience.

* Option A (Ability to embed credentials): Incorrect.

* Details: Embedding credentials (e.g., in data sources) is a server-wide setting (tsm data-access), not per-site. Site admins can't override it.

* Option C (Limitation on number of users): Incorrect.

* Details: User limits are tied to licenses (server-wide), not configurable per site. Site admins manage user assignments, not quotas.

Why This Matters: Site-specific settings enable tailored governance and resource allocation in multi-tenant environments.

Reference: Tableau Server Documentation - "Site Settings" (https://help.tableau.com/current/server/en-us/site_settings.htm).

NEW QUESTION # 49

.....

Even some one can job-hop to this international company. Opportunities are reserved for those who are prepared. Only if you pass the exam can you get a better promotion. And if you want to pass it more efficiently, we must be the best partner for you. Because we are professional Analytics-Admn-201 question torrent provider, we are worth trusting; because we make great efforts, we do better. Here are many reasons to choose us.

Exam Analytics-Admn-201 Exercise: <https://www.freecram.com/Salesforce-certification/Analytics-Admn-201-exam-dumps.html>

What's more, we always check the updating of Analytics-Admn-201 exam dumps to ensure the accuracy of questions, Salesforce Analytics-Admn-201 Practice Braindumps Our online resources and events enable you to focus on learning just what you want on your timeframe, It is well known that Analytics-Admn-201 exam test is the hot exam of Salesforce certification, Our Analytics-Admn-201 latest exam torrents are your best choice.

Custom setters provide this update in their implementation, Windows CE-based handheld devices, What's more, we always check the updating of Analytics-Admn-201 Exam Dumps to ensure the accuracy of questions.

Hot Analytics-Admn-201 Practice Braindumps 100% Pass | High Pass-Rate Analytics-Admn-201: Salesforce Certified Tableau Server Administrator 100% Pass

Our online resources and events enable you to focus on learning just what you want on your timeframe, It is well known that Analytics-Admn-201 exam test is the hot exam of Salesforce certification.

Our Analytics-Admn-201 latest exam torrents are your best choice, Candidates who don't study from real dumps questions fail to clear the Salesforce Certified Tableau Server Administrator examination in a short time.
