The top of the lists Certified Application Developer-ServiceNow (CAD) exam practice questions features are free demo download facility, 1 year free updated ServiceNow exam questions download facility, availability of Certified Application Developer-ServiceNow (CAD) exam questions in three different formats, affordable price, discounted prices and ServiceNow CAD exam passing money back guarantee.

ServiceNow CAD certification is highly valued in the industry, and certified professionals are in high demand. Certified Application Developer-ServiceNow certification is recognized globally and is an excellent way to enhance your career as a ServiceNow developer. By earning the ServiceNow CAD certification, you can demonstrate your expertise in ServiceNow development and stand out from the competition in the job market.

ServiceNow CAD (Certified Application Developer-ServiceNow) Exam is a certification exam for professionals who want to become certified developers on the ServiceNow platform. CAD exam is designed to test a candidate's knowledge and skills in developing and customizing applications on ServiceNow. CAD exam covers a wide range of topics including application development, scripting, UI customization, and integration with other systems. Passing CAD Exam signifies that a candidate has demonstrated proficiency in developing and customizing applications on the ServiceNow platform.

ServiceNow CAD Certification Exam is not an easy certification to attain as it requires a deep understanding of ServiceNow's development principles, functionalities, and best practices. However, it is worth the effort to earn the certification as it is a valuable credential in the ServiceNow ecosystem. The CAD certification can open doors for the candidate to work with different organizations and lead to promotions and salary raises. Additionally, ServiceNow has a robust certification program that offers a clear path for individuals looking to excel in ServiceNow development, with the CAD Certification being a cornerstone of that path.

Free demo of CAD exam dumps are provided by us, you can have a try before you buy them, so that you can know the mode of the CAD learning materials.

## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q22-Q27):

### NEW QUESTION # 22

Which one of the following is true for a table with the "Allow configuration" Application Access option selected?

- A. Any user with the application's user role can modify the application's scripts
- B. Only the in scope application's scripts can create Business Rules for the table

- C. Out of scope applications can create Business Rules for the table
- D. Out of scope applications can add new tables to the scoped application

**Answer: C**

Explanation:

The Allow configuration Application Access option determines whether users can configure the application tables, such as adding or modifying fields, views, or indexes. The following is true for a table with the Allow configuration option selected:

\* Out of scope applications can create Business Rules for the table. This is true because the Allow configuration option grants access to the table configuration to any user who has the admin or personalize\_dictionary role, regardless of the application scope. This means that users can create Business Rules, which are server-side scripts that run when a record is displayed, inserted, updated, or deleted, for the table from any application.

The following are not true for a table with the Allow configuration option selected:

\* Only the in scope application's scripts can create Business Rules for the table. This is false because the Allow configuration option does not restrict the creation of Business Rules to the in scope application, as explained above.

\* Any user with the application's user role can modify the application's scripts. This is false because the Allow configuration option does not grant access to the application scripts, such as client scripts or script includes, to any user who has the application's user role. To modify the application scripts, users need to have the admin role or the application's admin role.

\* Out of scope applications can add new tables to the scoped application. This is false because the Allow configuration option does not allow out of scope applications to add new tables to the scoped application. To add new tables to a scoped application, users need to have the admin role or the application's admin role and be in the application scope. ### NEW QUESTION # 23

If you create a SOAP Message, what syntax indicates a variable to pass when the function is called?

- A. current.variable\_name
- B. < variable\_name >.do?WSDL
- C. S{variable\_name}
- D. < variable\_name >

**Answer: C**

Explanation:

In the SOAP Message feature set, we indicate variables using the following syntax: S{variable\_name}. This allows us to pass a variable with the specified name from the SOAP message record to the web service function.

### NEW QUESTION # 24

Is it possible to change an application's scope?

- A. Yes, but only from global scope to private scope
- B. Yes it's possible.
- C. No, it's not possible.
- D. Yes. but only from private scope to global scope

**Answer: B**

Explanation:

It is possible to change an application's scope in ServiceNow, either from global to private or from private to global. However, changing the scope of an application may affect its functionality and compatibility with other applications. Therefore, it is recommended to test the application thoroughly before and after changing its scope.

### NEW QUESTION # 25

When a custom table is created, which access control rules are automatically created?

Choose 4 answers

- A. create
- B. write
- C. read
- D. delete
- E. update
- F. execute

**Answer: A,B,C,D**

### NEW QUESTION # 26

The source control operation used to store local changes on an instance for later application is called a(n)

<blank>.

- A. Tag
- B. Stash
- C. Branch
- D. Update set

**Answer: B**

Explanation:

The source control operation used to store local changes on an instance for later application is called a stash.

A stash is a temporary storage area for uncommitted changes that are not ready to be pushed to a remote repository. Developers can use stashes to save their work in progress without committing it to the local repository or discarding it. Stashes can be applied later to restore the changes to the working directory, or dropped if they are no longer needed.
