Latest L4M1 Test Online | Exam L4M1 Quick Prep

For candidates who are going to choose the L4M1 training materials online, the quality must be one of the most important standards. With skilled experts to compile and verify, L4M1 exam braindumps are high quality and accuracy, and you can use them at ease. In addition, L4M1 exam materials are pass guarantee and money back guarantee. You can try free demo for L4M1 Exam Materials, so that you can have a deeper understanding of what you are going to buy. We have online and offline chat service stuff, and if you have any questions for L4M1 exam materials, you can consult us.

CIPS Scope and Influence of Procurement and Supply Sample Questions (Q40-Q45):

NEW QUESTION # 40

Bob is a procurement manager at ABC Ltd. He has been asked to ensure all future purchases achieve 'value for money' for the organisation. What is meant by 'value for money'? (5 points). Describe 4 techniques that Bob could use to achieve this (20 points)

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

1) A definition of Value for Money: ensuring a purchase is cost effective. This may be that the purchase achieves the 5 Rights of Procurement or that the purchase achieves the 4Es: Economy, Efficiency, Effectiveness and Equity. - this is only worth 5 points, so don't spend too long on this

2) 4 techniques Bob can use to achieve VFM: this is the bulk of your essay. Each of the 4 will be worth 5 points, so remember to give a thorough explanation and example. Pick 4 from the list below: complete a value analysis to eliminate non-essential features, minimise variety/ consolidate demand, avoid over specification, pro-active sourcing, whole life costing methodologies, eliminate / reduce inventory, use electronic systems, international sourcing, sustainability / environmental policies, currency/ exchange rate considerations, negotiating good payment terms, packaging, warranties.

Example Essay:

"Value for money" (VFM) is a concept that refers to obtaining the best possible return on investment or benefits relative to the cost incurred. It involves assessing whether the goods, services, or activities provided offer an optimal balance between their cost and the quality, benefits, or outcomes they deliver.

Value for money is not solely about choosing the cheapest option; instead, it considers the overall efficiency, effectiveness, and long-term value derived from an expenditure. For Bob, the Procurement Manager at ABC Ltd there are four key ways that he can achieve this for all future purchases.

Value Engineering

This is looking at the components of a product and evaluating the value of each component individually.

You can then eliminate any components that do not add value to the end product. To do this Bob would choose a product to review and determine whether any parts of this can be omitted (thus saving the company money) or could be replaced by components that are of a higher quality at the same price (thus providing added value to the customer). For example, Bob could complete a Value Engineering exercise on the new mobile phone prototype ABC plan to release next year. His findings may discover a way to provide a higher quality camera at no additional cost or that some components don't add value and can be eliminated.

Consolidate demand

Bob can achieve value for money by consolidating demand at ABC Ltd. This would mean rather than each individual person/ department ordering what they want when they need it, Bob creates a centralised process for ordering items in bulk for the departments to share. For example, if each department requires stationary to be ordered, Bob can consolidate this demand and create one big order each quarter. This will likely result in cost savings for ABC as suppliers often offer discounts for large orders. Moreover, consolidating demand will allow for saving in time (one person does the task once, rather than lots of people doing the same task and duplicating work).

International sourcing

Bob may find there is value for money in changing suppliers and looking at international sourcing.

Often other countries outside of the UK can offer the same products at a lower cost. An example of this is manufactured goods from China. By looking at international supply chains, Bob may be able to make cost-savings for ABC. He should be sure that when using this technique there is no compromise on quality.

Whole Life Costing methodology

This is a technique Bob can use for procuring capital expenditure items for ABC. This involves looking at the costs of the item throughout its lifecycle and not just the initial purchase price. For example, if Bob needs to buy a new delivery truck he should consider not only the price of the truck, but also the costs of insurance for the truck, how expensive it is to buy replacement parts such as tyres and the cost of disposing of the truck once it reaches the end of its life. By considering these factors Bob will ensure that he buys the truck that represents the best value for money long term.

In conclusion Bob should ensure he uses these four techniques for all items he and his team procures in the future. This will ensure ABC Ltd are always achieving value for money, and thus remain competitive in the marketplace.

Tutor Notes

- This case study is really short, and the ones you'll receive in the exam are often longer and give you more guidance on what they're expecting you to write. With case study questions, you have to make your entire answer about Bob. So don't bring in examples from your own experience, rather, focus on giving examples for Bob.

- A good rule of thumb for case study questions is make sure you reference the case study once per paragraph.

- Value for Money is a really broad topic and you can pretty much argue anything that procurement does is helping to achieve value for money. There's a large table of stuff that's considered VFM on p.38 but that table isn't exhaustive. So feel free to come up with your own ideas for this type of essay.

Some additional tidbits of information on VFM:

- The 'academic' definition of Value for Money is 'the optimum combination of whole life cost and the quality necessary to meet the customer's requirement'

- Value for Money is an important strategic objective for most organisations but particularly in the public sector. This is because the public sector is financed by public money (taxes), so they must demonstrate that the organisation is using this money wisely. This might be an interesting fact to put into an essay on VFM.

- Value can often be hard to quantify, particularly in the service industry. E.g. in customer service it can be difficult to quantify the value of having knowledgeable and polite employees delivering the service.

NEW QUESTION # 41

Describe the main differences between the three economic sectors: public, private and third. Your answer may make reference to the following: funding, ownership, shares, objectives and administration (25 marks)

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

How to approach this question

- Sometimes CIPS give you a steer on how to answer the question. My advice is to follow it. The question says you MAY make reference to the following, but I'd use those hints as a guide for content- a paragraph on each and you're done!
- When you've got a 'may make reference to' hint - this means you can completely ignore it and do your own thing and bring in your own ideas. May means it's optional, so you wouldn't be penalised for this. However, you have to consider the examiner's mark scheme- it will detail options of stuff you can write for funding, ownership etc. Then there will be a line at the bottom saying something like 'accept other options such as x and y'. This leaves it up to the examiner to decide whether what you've said is relevant. I'd personally not leave it up to chance you get a lenient examiner. If you write what's definitely going to be on their mark scheme, you're more likely to get more points.

Example Essay

The modern economy is a complex tapestry of various sectors, each with its own distinct characteristics and functions. The three prominent sectors are the public sector, the private sector, and the third sector. These sectors differ significantly in terms of their funding mechanisms, ownership structures, objectives, the concept of shares, and their administration.

Firstly, the public sector is predominantly funded by the government through taxation, grants, and other forms of public revenue. Its very existence hinges on the provision of essential services and the fulfilment of societal needs. These organizations are owned by the government, be it at the federal, state, or local level. Unlike the private sector, the concept of shares doesn't apply in the public sector. Instead, the government allocates budgets to various departments and agencies for public services and projects. The primary objectives of the public sector revolve around the welfare of the citizens, including the provision of education, healthcare, defence, and infrastructure. It is characterized by bureaucratic administration, with decision-making processes subject to governmental regulations and oversight. A prime example is public schools and healthcare systems, which are funded and operated by the government with the primary objective of ensuring universal access to education and healthcare services.

In contrast, the private sector operates on a starkly different paradigm. It is primarily funded by private capital, investment, and profit-seeking activities. Private individuals and corporations own these entities, with ownership shares often represented by stocks. Shareholders invest capital in exchange for ownership stakes and the potential for dividends. The central objective in the private sector is profit maximization, driven by competition in the market. Companies in the private sector are administered by management teams and boards of directors, with decisions guided by market forces. Apple and ExxonMobil are examples of private sector entities, privately owned and publicly traded, with profit motives at their core. Shareholders invest in these companies with the expectation of financial returns.

Lastly, the third sector, often referred to as the nonprofit or voluntary sector, represents a unique economic sphere. It relies on a combination of funding sources, including donations, grants, and earned income, but not taxation. Third sector organizations are not owned by individuals or shareholders; instead, they are governed by boards of directors or trustees. Unlike the private sectors, shares are not applicable in the third sector. These organizations do not seek to distribute profits to owners. The primary objective of the third sector is to serve a social or community purpose, such as addressing societal issues, promoting social change, and providing services that benefit the public. Administration in this sector is overseen by non-profit boards, and it heavily relies on volunteers, philanthropy, and community engagement. For example, the Red Cross operates with the objective of providing humanitarian aid and disaster relief, relying on donations and volunteers to fulfil its mission. Any profits that are made are reinvested into the organisation to further its mission.

In conclusion, the public, private, and third sectors represent diverse economic domains, each with its own funding mechanisms, ownership structures, objectives, and administrative models. These sectors play essential and complementary roles in society, contributing to economic development, public welfare, and social progress. Together, they form the foundation of a balanced and dynamic economic landscape.

Tutor Notes

- I've structured this essay with a paragraph on each sector, but you could have done a paragraph on each theme, thus having 5 paragraphs instead of 3. Either approach works.
- You've got 5 things and 3 sectors, that equals 15 marks. If you give an example of each and a strong intro and conclusion, that's full marks.
- See LO 4.1 p. 203 - there's a cute table with this information on.

NEW QUESTION # 42

Sarah has recently been hired as the new Head of Procurement at Alpha Ltd, a manufacturer of small electronics such as hairdryers and alarm clocks. Alpha Ltd has a large factory based in Birmingham where many of the products are manufactured. One of the

large pieces of machinery in the factory has recently broken and Sarah has been charged with replacing it as quickly as possible. Sarah is considering using the Whole Life Costing approach to this procurement. What is meant by Whole Life Costing? (5 points).
Discuss
5 factors that Sarah should consider when buying new machinery (20 points).

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

How to approach this question

- I'd use clear headings with numbers for this one. It asks you for a definition and 5 factors. Number them.

Makes it easy for you to write and easy for the examiner to mark.

- Don't go over 5 - you won't get any extra points for this. So spend your time giving examples and explaining the 5 well, rather than naming more than 5.

Example Essay

As the new Head of Procurement at Alpha Ltd, Sarah faces the urgent task of replacing a critical piece of machinery in the company's Birmingham factory. Recognizing the complexity of the decision, Sarah contemplates utilizing the Whole Life Costing approach to ensure a comprehensive evaluation that goes beyond initial expenses. This essay explores the concept of Whole Life Costing and delves into five essential factors Sarah should consider when procuring new machinery.

Definition:

Whole Life Costing (WLC) is a procurement approach that considers the total cost associated with an asset throughout its entire lifecycle. Unlike traditional procurement methods that focus primarily on the initial purchase price, WLC evaluates all costs incurred from acquisition to disposal. This includes operational, maintenance, and disposal costs, providing a holistic perspective on the true financial impact of an asset over time.

Factors to Consider in Machinery Procurement

1) Initial Purchase Price:

While WLC looks beyond the initial cost, the purchase price remains a critical factor. Sarah should balance the upfront expense with the long-term costs to ensure the initial investment aligns with the overall financial strategy.

2) Operational Costs:

Sarah needs to analyze the ongoing operational costs associated with the new machinery. This includes energy consumption, routine maintenance, and potential repair expenses. Opting for energy-efficient and reliable equipment can contribute to substantial operational savings over the machine's lifespan, even though this may result in a higher up-front purchase price.

3) Training and Integration:

The cost of training employees to operate and maintain the new machinery is a significant consideration. Sarah should assess how easily the equipment integrates into existing workflows and whether additional training programs are required, impacting both immediate and long-term costs.

4) Downtime and Productivity:

Evaluating the potential downtime and its impact on productivity is crucial. Sarah should assess the reliability and historical performance of the machinery to gauge its potential contribution to sustained production levels and minimized disruptions, impacting the overall operational efficiency.

5) Technology Upgrades and Adaptability:

Sarah should consider the machinery's adaptability to technological advancements and potential upgrades.

Investing in equipment that allows for seamless integration with future technologies ensures that Alpha Ltd remains competitive and resilient in a rapidly evolving industry landscape.

In conclusion, adopting a Whole Life Costing approach empowers Sarah to make informed decisions that align with Alpha Ltd's strategic goals. By considering factors beyond the initial purchase price, such as operational costs, training, downtime, and technology adaptability, Sarah ensures that the replacement machinery not only meets immediate production needs but proves to be a cost-effective and efficient asset throughout its entire lifecycle. The WLC approach safeguards against unforeseen financial burdens, fostering sustainable and informed procurement practices in the dynamic manufacturing environment.

Tutor Notes

- Whole Life Costing is on p.28

- Total Life Cycle Costs, Total Cost of Ownership and Life Cycle Costs are all practically the same thing. The book says they're slightly different, but don't get yourself bogged down in trying to remember the differences.

Honestly, in the real world, people use this language interchangeably.

- Other factors you could have chosen to talk about include commissioning costs and disposal costs

- Don't worry if you feel CIPS breezed through this as a topic, they did. It's explained much better in L4M7.

You can read more about it here: Whole Life Costing - What is Whole Life Costing | CIPS and here Whole-Life Cost: What it Means, How it Works (investopedia.com)

NEW QUESTION # 43

What is a Code of Ethics? What should an Ethical Policy Contain? What measures can an organisation take if there is a breach of their Ethical Policy? (25 points)

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

- Firstly give a short definition of Code of Ethics: a document that sets out moral principles or values about what is right and wrong.
- What an Ethical Policy should contain: Condition of workers, Environment, H+S, Discrimination, Gift / Bribery Policy, Whistleblowing, Confidentiality, Fair Dealings, Declaration of Conflict of Interests. You won't have time to go into depth on all of these, so pick a few where you want to give an example.

- Measures to take if there is a breach: depending on what the breach is and who breached it this could include: education/ training, sanctions, blacklisting, reporting to authorities, publicise the issue, use a performance improvement plan, issue warnings, dismissal.

Example Essay:

A code of ethics is a formal document or set of principles that outlines the values, ethical standards, and expected conduct for individuals within an organization. It serves as a guide for employees and stakeholders, shaping their behaviour and decision-making to align with the organization's ethical framework. It may take the form of a Mission Statement, Core Values, Specific Guidelines or established reporting mechanisms. The purpose of the Code is to establish standards, promote integrity, mitigate risks and build trust- with both internal and external stakeholders.

A Code of Ethics may contain the following:

- Condition of workers - stating what the company will provide to the employees to make sure the environment is safe. This could include the physical environment but also hours worked, opportunities for breaks etc. Depending on the sector it could detail shift patterns, expectations regarding overtime and compensation.

- Environment - this section would discuss compliance with legislation regarding pollution, disposal of waste materials etc. Depending on the company's goals- they may have higher commitments to the environment than those imposed by the government. Additional commitments may include NetZero targets or the use of renewable sources of energy.

- H+S- Health and Safety. Ensuring that the working environment is free of hazards and that workers have the training and equipment they need to complete the work safely. E.g. PPE

- Discrimination- a promise not to discriminate based on any characteristic. Aligns with the Equalities Act.

Policy should include how the company would handle situations, for example if an employee reports an issue of discrimination or harassment. This may involve the use of a whistleblowing hotline or details on how to contact HR.

- Gift / Bribery Policy - this area of the code of conduct would explain whether the company allows staff members to receive gifts (e.g. from suppliers) and the processes to complete if they do (e.g. return the item, complete an internal document, donate the gift to charity). Different companies and industries will have different rules surrounding this, the Public Sector is much more likely to reject gifts from suppliers for example.

- Declaration of conflict of interests- this explains what staff should do if there is a conflict. For example if they are running a tender and their father owns one of the suppliers who is bidding for the work. The conflict of interest policy will explain what the person should do, how to report it and have mechanisms in place to ensure that nothing untoward could come of the situation. This may be having another member of staff mark the tender to ensure unbiasedness.

Measures to take in case of a breach

A response to a breach will depend on who breached the policy - whether this is an employee or a supplier. It will also depend on the severity of the breach.

Remedies for a supplier breach could include: education / training if the breach is minor. Supplier development if the relationship with the supplier is very important (for example if there are no other suppliers the buyer could turn to) and the breach is minor. If the breach is major such as fraud or misappropriation of funds, a buyer could look to issue sanctions, claim damages and dismiss the supplier. There could be options to claim liquidated damages if this is included in the contract. For very serious offenses the buyer may blacklist the supplier- never use them ever again and could also report the issue to the police if the breach is also criminal (e.g. modern slavery or fraud).

Remedies for an employee breach could include: for minor breaches training may be required, particularly if it was a junior member of the team and it was an innocent mistake like forgetting to fill out a form when they received a Gift. The employee could be carefully monitored and put on an Improvement Plan. If internal issues are found, such as several staff are breaching the Code of Ethics, senior management could look to review policies to make sure issues are being flagged and responded to in the best way. Employees who fail to follow the Ethical Policy, either through routinely failing to adhere to it or through a major breach could be dismissed from the organisation. There would need to be strong evidence of this.

In conclusion it is important for all organisations regardless of size of industry to have an Ethics Policy.

Sharing the code of ethics with staff is a fundamental step in embedding ethical principles into the organizational culture. Regular communication and training reinforce these principles, fostering a shared commitment to ethical behaviour across all levels of the organization.

Tutor Notes

- In an essay like this it's always a good example to use examples. They can be hypothetical - you don't have to know any company's Ethics policy off by heart. E.g. If a supplier breached a buyer's Ethical Policy by employing Child Labour in their factories, an appropriate measure for the buyer to take would be to cancel the contract and find another supplier. This is because not only is Child Labour illegal, the buyer will not want to be associated with this supplier as it will have negative repercussions on their image. The best response would therefore be to distance themselves from the supplier.
- Code of Ethics and an Ethics Policy are the same thing. Just different language. The terms can be used interchangeably
- Study guide p. 128

NEW QUESTION # 44

Explain what is meant by Corporate Governance and why having Corporate Governance structures is important. Discuss 2 obstacles which may impede an organisation achieving high levels of Corporate Governance. (25 points)

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

- Firstly start with a definition of Corporate Governance - this means the rules, policies, processes and organisational structures that ensure an organisation adheres to accepted ethical standards, good practices, the law and regulations. It's the systems put in place which directs and controls organisations to do 'the right thing'.
- Then move on to discuss why having this is important - I'd maybe think of 3-4 examples here such as:
protects the interest of shareholders, reduces risk, moral obligations, legal obligations
- The last part of your essay should talk about the 2 obstacles - describe two from the following list: lack of executive support, poor stakeholder co-operation, lack of clarity and / or resources, having poor IT systems, lack of co-ordination of procurement responsibilities. Because you're only talking about 2 here, you'll need to go into detail about them. So pick 2 you know well. Don't be tempted to talk about more than 2. You won't get extra marks.

Example Essay:

Corporate governance refers to the system of rules, practices, processes, and structures by which a company is directed and controlled. It encompasses the relationships among a company's management, its board of directors, shareholders, and other stakeholders. The primary objective of corporate governance is to ensure that the company operates in an ethical, transparent, and accountable manner, safeguarding the interests of shareholders and promoting long-term value creation. Corporate governance can be defined internally (by shareholders/ managers) or externally (by governments and international standard-setting bodies such as ISO) and is important for all organisations. Corporate governance is needed because you can't assume everyone will act ethically- rules and procedures need to be written down and the organisation needs to have recourse for dealing with behaviour that falls outside of what is accepted. Procurement's role in Corporate Governance includes control over finance and expenditure, ensuring the supply chain is 'clean' (i.e. not involved in unethical business practices such as child labour) and risk management.

Why having a corporate governance structure is important:

- 1) The procurement department has a 'stewardship' role - it controls large sums of organisation's funds. There are many opportunities to commit fraud, make unethical or biased decisions so it's important that there are corporate governance structures in place to prevent this. It protects the organisation from individuals with bad intent, scandal, and legal repercussions.
- 2) Strong Corporate Governance is required to successfully manage a supply chain. It's important to ensure good relationships- suppliers need to see you as a 'good customer'. If your organisation is seen to be unethical or underhand, suppliers may not want to work with you.
- 3) Financial impact - where corporate governance isn't implemented, there may be financial costs for the organisation. For example, in the Public Sector if a supplier successfully challenges a tender award, the buyer may have to award the value of the tender - so there's financial impact on a company if corporate governance isn't followed.

Obstacle 1 - lack of senior management support

Unless there is buy-in from the senior leadership team it will not be possible for departments such as Procurement to implement sound Corporate Governance procedures. Corporate Governance needs to be directed from the top of an organisation to ensure all departments and staff give importance to this. If Senior Leadership are seen not to care about implementing or following Corporate Governance, other staff won't care either. They need to lead by example to ensure the whole organisation 'buys into' the processes.

Obstacle 2 - Poor IT infrastructure.

For Corporate Governance to be effective, an effective IT system must be implemented. For example, to avoid fraud it's not just necessary to have a written anti-fraud policy, there must be ways of checking that fraud isn't being committed. The way to do this is to have an effective IT system which can flag anomaly payments and procurement activities outside of what is considered 'normal'. Therefore, having a poor IT infrastructure is a barrier to effective Corporate Governance.

In conclusion, corporate governance is essential for building trust among stakeholders and contributing to the overall success and sustainability of a company. Effective governance structures and practices instil confidence in investors, enhance the company's reputation, and foster a culture of responsibility and accountability throughout the organization. Good corporate governance is a cornerstone of sound business management and contributes to the long-term prosperity of the company.

Tutor Notes

- Corporate Governance became a big thing in the 70s and 80s following high profile scandals and the collapse of several companies. Investors were concerned about what companies were doing which led to increased control on the powers of directors and greater transparency of corporate actions.
- Examples of Corporate Governance. Enron is a good real life example you could use: Impact of Bad Corporate Governance - Corporate Fraud and Corruption: A Holistic Approach to Preventing Financial Crises (ebruary.net)
- This is a really good real-life example of Public Sector procurement gone wrong: Flawed nuclear tender sees £100m payout to firms - BBC News
- Adding in some real life examples will take your essay from a Merit result (50-70%) to a Distinction (70%+)
- Another way this topic can come up as a question is describing the elements of corporate governance, or asking what a procurement manager should do when corporate governance is broken/ not followed.
- LO 3.1 p.117

NEW QUESTION # 45

.....

Our website is considered to be the most professional platform offering L4M1 practice materials, and gives you the best knowledge of the L4M1 practice materials. Passing the exam has never been so efficient or easy when getting help from our Scope and Influence of Procurement and Supply practice materials.
