- D. Automated creation of custom KPI dashboards
- E. Self-service approach to define an initial process monitoring framework

**Answer: A,C,E**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: The benefits of SAP Signavio's AI-assisted performance indicator recommender include providing a simple connection between business problems, processes, and metrics for targeted monitoring; enabling a self-service approach to establish process monitoring frameworks; and delivering instant recommendations based on best practices to accelerate process improvement.

Exact extracts supporting this:

Simple connection: "Leverage the simplified connection between the business problem, the affected process, and the relevant metric ... "community.sap.com Self-service approach: "The AI-assisted performance indicators recommender capability provides process owners and analysts with instant, curated recommendations on the process ... "learning.sap.com (Implying self-service through analyst access.) Instant recommendations: "Instant recommendations based on best practices."learning.sap.com "An AI-assisted performance indicators recommender delivers instant recommendations on the most relevant process performance indicators (PPIs) ... "news.sap.com Other options are incorrect because:

Option B: While recommendations aid monitoring, automated dashboard creation is not a specified benefit; focus is on indicator suggestions.

Option D: Standardization may occur indirectly, but the recommender emphasizes instant, tailored recommendations rather than cross-system uniformity.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: From SAP News "New Process AI Capabilities for SAP Signavio" and SAP Help Portal "AI-Assisted Performance Indicators Recommender." **Answer: B,C,D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: Generative AI tools for SAP Cloud ERP transformation include process automation capabilities in SAP Build Process Automation for generating and automating business processes, the process model generator in SAP Signavio for creating process models using AI, and the ABAP Business Object generator in Joule for developing ABAP-based business objects to extend ERP functionalities. These tools facilitate efficient migration, customization, and optimization during cloud ERP transformations by leveraging generative AI to streamline code, processes, and extensions.
