New VMware 3V0-32.23 Real Exam | 3V0-32.23 Latest Exam Cost

Do you want to obtain the 3V0-32.23 exam bootcamp as soon as possible? If you do, you can choose us, since our 3V0-32.23 exam dumps are famous for instant access to download, and you can receive the download link and password within ten minutes, so that you can begin your practice as early as possible. In addition, with skilled professionals to compile and verify, 3V0-32.23 Exam Materials are high-quality, therefore they can help you pass the exam in your first attempt. In order to strengthen your confidence for the 3V0-32.23 exam braindumps, we are pass guarantee and money back guarantee, if you fail to pass the exam, we will give you full refund.

VMware 3V0-32.23 Exam is a vendor-neutral certification exam, which means that it is not tied to any specific vendor or technology. Cloud Management and Automation Advanced Design certification exam covers a wide range of topics, including cloud

architecture design, cloud security, automation, and management. Cloud Management and Automation Advanced Design certification is ideal for individuals who want to advance their careers in cloud management and automation and want to be recognized as experts in the field.

VMware Cloud Management and Automation Advanced Design Sample Questions (Q137-Q142):

NEW QUESTION # 137

What are two requirements for deploying a small deployment of vRealize Automation? (Choose two.)

- A. Upgrading the existing vRealize Suite Lifecycle Manager
- B. Certificate Authority (CA)-signed certificate for all the components of deployment
- C. Single, static IPv4 and network address
- D. Valid, fully-qualified domain name that can be resolved with both forward and reverse lookup
- E. Configured load balancers

Answer: C,D

NEW QUESTION # 138

An architect is tasked with designing a solution to satisfy the following requirements for vSphere Machine provisioning: All business groups share the same vCenter template. Based on the user selected application name, a corresponding vCenter customization specification should be selected. If no match is found, the business group's default customization specification should be used. Which two solutions could meet these requirements?

- A. 1. Define CloneSpec custom property in the Business Group
2. Overwrite CloneSpec custom property in the application's specific blueprint
- B. 1. Define_cloneSpec custom property in the Business Group specific Reservation
2. Overwrite_cloneSpec custom property using application specific property group
- C. 1. Define CloneSpec custom property in the Business Group specific Reservation
2. Overwrite CloneSpec custom property in the application specific blueprint
- D. 1. Define CloneSpec custom property in the Business Group
2. If available, dynamically set_cloneSpec custom property at an appropriate Event Broker state, based on user selected application name

Answer: B

NEW QUESTION # 139

A customer will use the vRealize Automation platform for production and development deployments to the same vSphere cluster. One of their vSphere templates will only be licensed for use in development and must not be used for production. The customer has defined a tag category called 'environment' with three possible values 'development', 'test' and 'production' to differentiate the environments.

Which two design decisions will ensure that the requirements are met? (Choose two.)

- A. Define a tag of "environment:development" in all development Cloud Templates
- B. Define a tag of "environment:development" on the Cloud Zone
- C. Define a tag of "environment:production" on the licensed image mapping
- D. Define a tag of "environment:production" on the Cloud Zone
- E. Define a tag of "environment:development" on the licensed image mapping

Answer: A,E

NEW QUESTION # 140

What role does VMware Aria Operations play within a Cloud Management logical design?

- A. Analyzing financial data
- B. Creating marketing campaigns
- C. Monitoring and maintaining IT infrastructure

- D. Managing human resources

Answer: C

NEW QUESTION # 141

A company is planning to deploy a new cloud management solution that will allow business users to deploy servers via a self-service portal.

After the initial discovery workshop with the new service owner, the architect has gained the following key information about the project:

- In an effort to increase user experience, the IT Manager has requested that all deployments do not rely on manual approvals.
- The current IT team is made up of five engineers but only one engineer has any experience writing scripts or automating server deployments.
- The current version of the CMDB solution has no API available to create or destroy configuration items (CI) and there is no budget for upgrades.
- Currently all CMDB activities are completed manually via service request with an SLA of 4 hours.
- The customer has one data center with a requirement of protection against data center failure.
- The expected availability SLA (measured monthly) will be 99.5%.
- The deployment of a server is expected to take no longer than 2 hours.

Given the information provided, which two risks should the architect document within the design?

(Choose two.)

- A. The lack of REST-API for IP address management solution.
- B. The customer only has a single data center location.
- C. Allowing self-service deployments of servers by business users.
- D. The end to end server deployment cannot be achieved in the time window.
- E. There is insufficient resources available to complete the project.

Answer: A,D
