If you buy CCAAK exam material, things will become completely different. Confluent Certified Administrator for Apache Kafka study questions will provide you with very flexible learning time. Unlike other learning materials on the market, CCAAK exam guide has an APP version. You can download our app on your mobile phone. And then, you can learn anytime, anywhere. Whatever where you are, whatever what time it is, just an electronic device, you can practice. With Confluent Certified Administrator for Apache Kafka study questions, you no longer have to put down the important tasks at hand in order to get to class; with CCAAK Exam Guide, you don't have to give up an appointment for study. Our study materials can help you to solve all the problems encountered in the learning process, so that you can easily pass the exam.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.
Topic 2	<ul style="list-style-type: none">Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.
Topic 3	<ul style="list-style-type: none">Apache Kafka® Fundamentals: This section of the exam measures skills of a Kafka Administrator and covers core concepts such as Kafka architecture, components, and data flow. It assesses the candidate's understanding of topics like topics and partitions, brokers, producers, consumers, and message retention.
Topic 4	<ul style="list-style-type: none">Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.

CCAAK exam collection: Confluent Certified Administrator for Apache Kafka & CCAAK torrent VCE

The Confluent CCAAK exam is one of the most valuable certification exams. The CCAAK exam opens a door for beginners or experienced Confluent professionals to enhance in-demand skills and gain knowledge. CCAAK credential is proof of candidates' expertise and knowledge. To get all these benefits Confluent you must have to pass the CCAAK Exam which is not an easy task. Solutions provide updated, valid, and actual Confluent Certified Administrator for Apache Kafka (CCAAK) Dumps that will assist

you in CCAAK preparation and you can easily get success in this challenging Confluent CCAAK exam with flying colors.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q49-Q54):

NEW QUESTION # 49

Which valid security protocols are included for broker listeners? (Choose three.)

- A. SSL
- B. PLAINTEXT
- C. SASL_SSL
- D. SASL
- E. GSSAPI

Answer: A,B,C

NEW QUESTION # 50

Which out-of-the-box Kafka Authorizer implementation uses ZooKeeper?

- A. Ranger
- B. ACLs
- C. LDAP
- D. RBAC

Answer: B

Explanation:

Kafka's built-in ACL (Access Control List) authorizer stores and manages permissions using ZooKeeper by default. This implementation controls access at the resource level (topics, consumer groups, etc.).

NEW QUESTION # 51

A company has an existing Kafka cluster running without SSL/TLS enabled. The customer wants to enable SSL on brokers to secure data in transit, but they would like to give applications connecting to this cluster some time to migrate to using SSL connection instead of putting a hard stop.

Which solution will meet the customer's requirements?

- A. Enable SSL on the current listener, and do not implement SSL on application side.
- B. Enable SSL on the current Listener, and do not enable mTLS.
- C. Create a new listener with SSL enabled.
- D. Modify the advertised listeners setting on brokers to use SSL.

Answer: C

Explanation:

Kafka supports multiple listeners, allowing you to run PLAINTEXT and SSL simultaneously. By creating a new SSL-enabled listener (e.g., on a different port), existing applications can continue using PLAINTEXT while gradually migrating to the SSL listener. This approach avoids downtime and gives clients time to adapt without enforcing a hard cutover.

NEW QUESTION # 52

A customer has a use case for a ksqlDB persistent query. You need to make sure that duplicate messages are not processed and messages are not skipped.

Which property should you use?

- A. `processing.guarantee=exactly_once`
- B. `ksql.fail.on.production.error=false`
- C. `ksql.streams auto.offset.reset=latest`
- D. `ksql.streams auto offset.reset=earliest`

Answer: A

Explanation:

processing.guarantee=exactly_once ensures that messages are processed exactly once by ksqldb, preventing both duplicates and message loss.

NEW QUESTION # 53

A topic 'recurring payments' is created on a Kafka cluster with three brokers (broker id '0', '1', '2') and nine partitions. The 'min.insync replicas' is set to three, and producer is set with 'acks' as 'all'. Kafka Broker with id '0' is down.

Which statement is correct?

- A. Producers can write messages to all the partitions, because new leaders for the partitions will be elected.
- **B. Producers and consumers will have no impact on six of the nine partitions.**
- C. Producers will only be able to write messages to the topic where the Leader for the partition is on Broker id T.
- D. Consumers can read committed messages from partitions on broker id T, '2'

Answer: B

Explanation:

With 9 partitions spread across 3 brokers, each broker typically hosts 3 leaders (assuming even distribution). When Broker 0 fails, the partitions for which it was leader will elect new leaders on brokers 1 or 2 if enough in-sync replicas (ISRs) remain. But since min.insync.replicas=3 and only 2 brokers are up, no partition can meet the minimum in-sync replica requirement, so producers with acks=all will fail to write. However, for partitions where Broker 0 is not the leader, consumers can still read committed messages. Given that only 3 partitions likely had Broker 0 as leader, six partitions remain accessible for reads, but not writes.

NEW QUESTION # 54

.....

Practicing with the Confluent CCAAK practice test, you can evaluate your Confluent CCAAK exam preparation. It helps you to pass the CCAAK test with excellent results. CCAAK imitates the actual Confluent Certified Administrator for Apache Kafka exam environment. You can take the Confluent CCAAK Practice Exam many times to evaluate and enhance your Confluent CCAAK exam preparation level.
