Response:

- A. the parent job is still active
- **B. Checkpoint restart is disabled**
- C. child jobs are still active
- D. Multiplexing is enabled

Answer: B

NEW QUESTION # 139

An administrator has a job that has failed. See the contents of the Job's Detailed Status tab from the NetBackup Activity Monitor provided below:

What may be the cause for the failure?

Response:

- **A. The media server is unable to resolve the hostname of the client to any IP address.**
- B. The version of NetBackup installed on the master server and media server is higher than the version installed on the client.
- C. The media server failed to perform a reverse name lookup of the IP address associated with the client.
- D. The required NetBackup processes need to be started on the client.

Answer: A

NEW QUESTION # 140

The administrator of a large bank needs to preserve financial information for an extended period of time. The bank's NetBackup 8.0 catalog is now over 800GB in size, causing the catalog backups to contend for resources with production system backups.

How can the administrator shorten the time needed to back up the catalog?

Response:

- A. use the NetBackup 8.0 client-side deduplication feature to shorten the time it takes to perform a catalog backup
- B. use the NetBackup 8.0 Agent for Symantec Enterprise Vault to perform an online archive of the catalog
- C. back up the catalog by scheduling an online Sybase database backup policy to allow the backup to run without contending for resources
- **D. create a catalog archive policy and execute it from the command line using the bpcatarc command**

Answer: D

NEW QUESTION # 141

An administrator is adding a new Media Server appliance to an existing NetBackup appliance Master Server. What is the correct sequence to configure the new appliance in the NetBackup domain?

Response:
