If we waste a little bit of time, we will miss a lot of opportunities. If we miss the opportunity, we will accomplish nothing. Then, life becomes meaningless. Our 300-540 preparation exam have taken this into account, so in order to save our customer's precious time, the experts in our company did everything they could to prepare our 300-540 Study Materials for those who need to improve themselves quickly in a short time to pass the exam to get the 300-540 certification.

If you have interests with our 300-540 practice materials, we prefer to tell that we have contacted with many former buyers of our 300-540 exam questions and they all talked about the importance of effective 300-540 learning prep playing a crucial role in your preparation process. Our practice materials keep exam candidates motivated and efficient with useful content based wholly on the real 300-540 Guide materials.

Cisco 300-540 Test Sample Online - Valid 300-540 Test Sims

Everyone has different learning habits, 300-540 exam simulation provide you with different system versions. Based on your specific situation, you can choose the version that is most suitable for you, or use multiple versions at the same time. After all, each version of 300-540 Preparation questions have its own advantages. If you are very busy, you can only use some of the very fragmented time to use our 300-540 study materials.

Cisco 300-540 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cloud Interconnect: This section of the exam measures the skills of Service Provider Network Engineers and covers how large networks interconnect with cloud platforms and carrier-neutral facilities. Candidates are expected to understand various connectivity options to cloud providers, customer sites, and other neutral facilities, as well as evaluate WAN connectivity models such as direct connect, MPLS or segment routing, and IPsec VPN links. The domain also includes the ability to troubleshoot advanced data center interconnect solutions, including EVPN VXLAN, EVPN over SR• MPLS, ACI-based connectivity, and pseudowire architectures supporting cloud-to-cloud and cloud-to-edge communication.

Topic 2	<ul style="list-style-type: none"> Virtualized Architecture: This section of the exam measures the skills of Cloud Network Engineers and covers the foundational concepts of virtualized infrastructures used in modern service provider and cloud environments. Candidates are expected to understand constraints in IaaS designs, determine appropriate cloud service models, and demonstrate awareness of container orchestration compared to traditional virtual machines. The exam also evaluates the ability to implement key virtualization functions such as NFV, VNF, NSO, and virtualized Cisco platforms. Learners must be able to deploy NFV with automation tools, manage VNF onboarding, work with NSO-driven orchestration, and use protocols like NETCONF, RESTCONF, REST APIs, and gNMI within automated cloud ecosystems. A general understanding of supporting platforms such as OpenStack also forms part of the required knowledge in this domain.
Topic 3	<ul style="list-style-type: none"> Service Assurance and Optimization: This section of the exam measures the skills of Cloud Operations Engineers and covers assurance mechanisms used to maintain performance, stability, and visibility across NFVI environments. It includes network assurance concepts such as MANO frameworks, VNF workload monitoring, VIM control plane KPIs, and streaming telemetry with gRPC and gNMI. Candidates must understand cloud infrastructure performance monitoring tools, including SR-PM, NetFlow, IPFIX, syslog, SNMP traps, RMON, cloud agents, and automated fault management systems. The domain also touches on diagnosing NFVI-related errors and optimizing VNFs using techniques such as SR-IOV and software-accelerated virtual switching technologies like DPDK and VPP.
Topic 4	<ul style="list-style-type: none"> High Availability: This section of the exam measures the skills of Cloud Infrastructure Architects and covers the design and implementation of redundancy and resiliency mechanisms in virtualized network functions and distributed cloud platforms. It includes data plane redundancy for VNFs, high availability within a single VIM control plane, and resilient compute, vNIC, and top-of-rack switching. The exam requires an understanding of multi-homing, EVLAG configurations, virtual private cloud deployment, and ECMP strategies for NFVI integrations with physical routing protocols such as BGP, OSPF, and IS-IS. Candidates must also recommend suitable high-availability models involving DNS, routing, and load balancing.
Topic 5	<ul style="list-style-type: none"> Security: This section of the exam measures the skills of Network Security Engineers and covers the implementation of infrastructure-level protection in cloud and NFVI ecosystems. It includes topics such as ACLs, uRPF, RTBH, router hardening, BGP flowspec, TACACS, and MACSEC. Candidates should understand DoS mitigation methods and apply security practices within NFVI, focusing on API protection, securing the control and management plane, and segmentation strategies in service provider cloud environments. The domain also evaluates basic knowledge of TLS, mTLS, and general cloud security solutions related to DNS protection, zero-day defenses, and malware detection.

Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Sample Questions (Q18-Q23):

NEW QUESTION # 18

Pseudowires are typically used for:

- A. Directly connecting two locations without encryption
- B. Decreasing the overall security of a network
- C. Emulating a physical wire over a MPLS network
- D. Providing a dedicated, high-latency connection between data centers

Answer: C

NEW QUESTION # 19

IaaS, PaaS, SaaS, and FaaS are all types of cloud services.

Which one provides the most managed service?

- A. IaaS
- B. SaaS
- C. FaaS
- D. PaaS

Answer: B

NEW QUESTION # 20

Which format is used by Cisco Container Platform for configuration files?

- A. XHTML
- **B. YAML**
- C. HTML
- D. XML

Answer: B

Explanation:

Comprehensive and Detailed Explanation

Cisco Container Platform (CCP), built on Kubernetes orchestration, uses YAML files for:

- * Cluster configuration
- * Pod definitions
- * Network settings
- * Storage mappings

YAML is the industry-standard declarative syntax for Kubernetes and container orchestration platforms.

HTML, XHTML, and XML are not used for CCP configuration.

NEW QUESTION # 21

Which protocol is used for device authentication, authorization, and accounting?

- A. MACSEC
- **B. TACACS**
- C. uRPF
- D. ACL

Answer: B

NEW QUESTION # 22

Which of the following best describes the relationship between OpenStack and NFV?

- A. OpenStack and NFV cannot be used together.
- B. OpenStack provides the physical infrastructure for NFV.
- C. NFV is a component of OpenStack.
- **D. NFV can be deployed on top of OpenStack to virtualize network functions.**

Answer: D

NEW QUESTION # 23

.....

As the old saying goes, Rome was not built in a day. For many people, it's no panic passing the 300-540 exam in a short time.

Luckily enough, as a professional company in the field of 300-540 practice questions, our products will revolutionize the issue. The 300-540 Study Materials that our professionals are compiling which contain the most accurate questions and answers will effectively solve the problems you may encounter in preparing for the 300-540 exam.
