

Latest Workday Workday-Pro-Integrations Practice test Material in Three Different Formats

BONUS!!! Download part of Prep4away Workday-Pro-Integrations dumps for free: <https://drive.google.com/open?id=1jxXZeAllx1RsDBjAACReR0CTJZJwKd4q>

If you plan to apply for the Workday Pro Integrations Certification Exam (Workday-Pro-Integrations) certification exam, you need the best Workday-Pro-Integrations practice test material that can help you maximize your chances of success. You cannot rely on invalid Workday-Pro-Integrations Materials and then expect the results to be great. So, you must prepare from the updated Workday Workday-Pro-Integrations Exam Dumps to crack the Workday-Pro-Integrations exam.

You can take Workday Pro Integrations Certification Exam (Workday-Pro-Integrations) practice exams (desktop and web-based) of Prep4away multiple times to improve your critical thinking and understand the Workday Workday-Pro-Integrations test inside out. Prep4away has been creating the most reliable Workday Dumps for many years. And we have helped thousands of Workday aspirants in earning the Workday Pro Integrations Certification Exam (Workday-Pro-Integrations) certification.

>> Hot Workday-Pro-Integrations Spot Questions <<

Quiz 2026 Unparalleled Workday Hot Workday-Pro-Integrations Spot Questions

The authority of Workday Workday-Pro-Integrations exam questions rests on its being high-quality and prepared according to the latest pattern. Prep4away is proud to announce that our Workday Workday-Pro-Integrations Exam Dumps help the desiring candidates of Workday Workday-Pro-Integrations certification to climb the ladder of success by grabbing the Workday Exam Questions.

Workday Workday-Pro-Integrations Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Reporting: This section of the exam measures the skills of Reporting Analysts and focuses on building, modifying, and managing Workday reports that support integrations. It includes working with report writer tools, custom report types, calculated fields within reports, and optimizing report performance to support automated data exchange.
Topic 2	<ul style="list-style-type: none"> • Calculated Fields: This section of the exam measures the skills of Workday Integration Analysts and covers the creation, configuration, and management of calculated fields used to transform, manipulate, and format data in Workday integrations. It evaluates understanding of field types, dependencies, and logical operations that enable dynamic data customization within integration workflows.
Topic 3	<ul style="list-style-type: none"> • Integrations: This section of the exam measures the skills of Integration Specialists and covers the full spectrum of integration techniques in Workday. It includes an understanding of core integration architecture, APIs, Workday Studio, and integration system user setup. The focus is on building scalable, maintainable, and secure integrations that ensure seamless system interoperability.

Workday Pro Integrations Certification Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

You have been asked to refine a report which outputs one row per worker and is being used in an integration that sends worker data to one of your third-party systems. The integration should only send workers who have been hired in the last 30 days. Where in the custom report definition can you specify a condition that would include only workers who have been hired in the last 30 days?

- A. Subfilter
- **B. Filter**
- C. Output
- D. Columns

Answer: B

Explanation:

In Workday, when refining a custom report to include specific conditions such as limiting the output to workers hired in the last 30 days, the appropriate place to specify this condition is within the Filter tab of the custom report definition. The Filter tab allows you to define criteria that determine which instances of the primary business object (in this case, "Worker") are included in the report output. This is critical for integrations, as the filtered data ensures that only relevant records are sent to the third-party system. The requirement here is to restrict the report to workers hired within the last 30 days. In Workday reporting, this can be achieved by adding a filter condition on the "Hire Date" field of the Worker business object. Specifically, you would configure the filter to compare the "Hire Date" against a dynamic date range, such as "Current Date minus 30 days" to "Current Date." This ensures the report dynamically adjusts to include only workers hired in the last 30 days each time it runs, which aligns with the needs of an integration sending real-time data to a third-party system.

Here's why the other options are incorrect:

A . Subfilter: Subfilters in Workday are used to further refine data within a related business object or a subset of data already filtered by the primary filter. They are not the primary mechanism for applying a condition to the main dataset (e.g., all workers). For this scenario, a subfilter would be unnecessary since the condition applies directly to the Worker business object, not a related object.

B . Output: The Output section of a custom report definition controls how the report is displayed or delivered (e.g., file format, scheduling), not the data selection criteria. It does not allow for specifying conditions like hire date ranges.

C . Columns: The Columns tab defines which fields are displayed in the report output (e.g., Worker ID, Name, Hire Date). While you can add the "Hire Date" field here for visibility, it does not control which workers are included in the report—that is the role of the Filter tab.

To implement this in practice:

In the custom report definition, go to the Filter tab.

Add a new filter condition.

Select the "Hire Date" field from the Worker business object.

Set the operator to "in the range" and define the range as "Current Date - 30 days" to "Current Date" (using dynamic date functions available in Workday).

Save and test the report to ensure it returns only workers hired within the last 30 days.

This filtered report can then be enabled as a web service (via the Advanced tab) or used in an Enterprise Interface Builder (EIB) or Workday Studio integration to send the data to the third-party system, meeting the integration requirement.

Reference from Workday Pro Integrations Study Guide:

Workday Report Writer Fundamentals: Section on "Creating and Managing Filters" explains how filters are used to limit report data based on specific conditions, such as date ranges.

Integration System Fundamentals: Discusses how custom reports serve as data sources for integrations and the importance of filters in defining the dataset.

Core Connectors & Document Transformation: Highlights the use of filtered custom reports in outbound integrations to third-party systems.

NEW QUESTION # 16

What is the task used to upload a new XSLT file for a pre-existing document transformation integration system?

- A. Edit Integration Attachment Service
- **B. Edit XSLT Attachment Transformation**
- C. Edit Integration Attachment
- D. Edit Integration Service Attachment

Answer: B

Explanation:

In Workday, when you need to upload a new XSLT (Extensible Stylesheet Language Transformations) file to modify or replace an existing transformation within a pre-existing document transformation integration system, the specific task required is "Edit XSLT Attachment Transformation." This task allows users to update the XSLT file that governs how XML data is transformed within the integration system without creating an entirely new transformation object.

Here's why this is the correct answer:

Workday's integration systems often rely on XSLT to transform XML data into the desired format for downstream systems or processes. When an XSLT file has already been associated with an integration system (e.g., as part of an Enterprise Interface Builder (EIB) or a Document Transformation Connector), updating it requires accessing the existing transformation configuration. The "Edit XSLT Attachment Transformation" task enables users to upload a revised version of the XSLT file. This action replaces the previous file while maintaining the integration system's configuration, ensuring continuity without necessitating additional changes to the system itself.

This task is distinct from other options because it specifically targets the transformation logic (XSLT) rather than broader integration components or services.

Let's examine why the other options are incorrect:

A . Edit Integration Attachment: This task is used to manage generic attachments associated with an integration, such as input files or supplementary documents, but it does not specifically address XSLT transformations. It lacks the precision required for updating transformation logic.

B . Edit Integration Attachment Service: This is not a recognized task in Workday's integration framework. It appears to be a conflation of terms and does not align with the documented processes for managing XSLT files.

D . Edit Integration Service Attachment: While this might suggest modifying an attachment related to an integration service, it is not the correct task for handling XSLT files in a document transformation context. Workday documentation consistently points to "Edit XSLT Attachment Transformation" for this purpose.

The process typically involves:

Navigating to the integration system in Workday (e.g., via the "Search" bar by entering the integration system name).

Using the related actions menu to select "Integration System" > "Edit XSLT Attachment Transformation." Uploading the new XSLT file, which must comply with Workday's size limitations (e.g., 30 MB for attachments) and be properly formatted.

Saving the changes, which updates the transformation logic without altering other integration configurations.

This approach ensures that transformations remain aligned with business requirements, such as reformatting data for compatibility with external systems, while leveraging Workday's secure and efficient integration tools.

:

Workday Pro Integrations Study Guide: "Configure Integration System - TRANSFORMATION" section, which details the use of XSLT files in document transformations and the associated tasks.

Workday Documentation: "Enterprise Interface Builder (EIB)" and "Document Transformation Connector" sections, where the "Edit XSLT Attachment Transformation" task is outlined for updating XSLT files.

Workday Community: Guidance on managing XSLT attachments, confirming this task as the standard method for updating pre-existing transformations.

NEW QUESTION # 17

What XSL component is required to execute valid transformation instructions in the XSLT code?

- A. **xsl:template**
- B. xsl:call-template
- C. xsl:apply-template
- D. xsl:output

Answer: A

Explanation:

The <xsl:template> is the core component in XSLT. It defines the transformation rules that will be applied to nodes in the XML document.

"Without at least one <xsl:template> element, an XSLT file cannot perform any transformation. This is the execution block where processing logic begins." Why the others are incorrect:

- B . <xsl:apply-templates> applies templates but is not valid without the actual template definitions.
- C . <xsl:call-template> calls named templates - which must first exist.
- D . <xsl:output> defines format but does not perform transformation logic.

NEW QUESTION # 18

What is the purpose of the <xsl:template> element?

- A. Grant access to the XSLT language.
- B. Generate an output file name.
- C. Determine the output file type.
- D. **Provide rules to apply to a specified node.**

Answer: D

NEW QUESTION # 19

What are the two valid data source options for an Outbound EIB?

- A. XpressO Report or Custom Report
- B. Custom Report or Business Process
- C. **Custom Report or Workday Web Service**
- D. Web Service or Business Process

Answer: C

Explanation:

An Outbound EIB (Enterprise Interface Builder) requires a data source to extract information from Workday.

The two valid data source types are:

- * Custom Report (Advanced or Simple)
- * Workday Web Service (WWS)

From Workday documentation:

"Outbound EIBs support either a Custom Report marked as Web Service Enabled, or a Workday Public Web Service (WWS) operation, as the data source."

- * Custom Reports allow user-defined data with filtering.
- * Web Services allow access to standard operations like Get_Workers.

Why the other options are incorrect:

- * A. Business Process is not a data source type.
- * B. XpressO Reports are not supported for integrations.
- * C. Business Processes cannot feed EIBs directly as data sources.

NEW QUESTION # 20

.....

As is known to us, our company is professional brand established for compiling the Workday-Pro-Integrations study materials for all candidates. The Workday-Pro-Integrations study materials from our company are designed by a lot of experts and professors of our

company in the field. We can promise that the Workday-Pro-Integrations study materials of our company have the absolute authority in the study materials market. We believe that the study materials designed by our company will be the most suitable choice for you. You can totally depend on the Workday-Pro-Integrations Study Materials of our company when you are preparing for the exam.
