[Download AAISM Certification Exam Dumps for Best Preparation](#)

**Exam** : **AAISM**

**Title** : ISACA Advanced in AI  
Security Management Exam

<https://www.passcert.com/AAISM.html>

1/6

P.S. Free 2026 ISACA AAISM dumps are available on Google Drive shared by Exam4Free: [https://drive.google.com/open?id=1Nfro\\_4Aqs7jykQ1vjXP-Egkzrj7gmB](https://drive.google.com/open?id=1Nfro_4Aqs7jykQ1vjXP-Egkzrj7gmB)

The competition in today's society is the competition of talents. Can you survive and be invincible in a highly competitive society? Can you gain a foothold in such a complex society? If your answer is "no", that is because your ability is not strong enough. Our AAISM test braindumps are in the leading position in the editorial market, and our advanced operating system for AAISM Latest Exam torrent has won wide recognition. As long as you choose our AAISM exam questions and pay successfully, you do not have to worry about receiving our learning materials for a long time. We assure you that you only need to wait 5-10 minutes and you will receive our AAISM exam questions which are sent by our system.

## ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.</li> </ul>

## AAISM Reliable Test Syllabus - AAISM Reliable Test Online

The ISACA AAISM certification provides is beneficial to accelerate your career in the tech sector. Today, the ISACA AAISM certification is a fantastic choice to get high-paying jobs and promotions, and to achieve it, you must crack the challenging AAISM Exam. It is critical to prepare with actual ISACA Advanced in AI Security Management (AAISM) Exam (AAISM) exam questions if you have less time and want to clear the test in a short time. You will fail and waste time and money if you do not prepare with real and updated AAISM Questions.

### ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q36-Q41):

#### NEW QUESTION # 36

A financial institution plans to deploy an AI system to provide credit risk assessments for loan applications.

Which of the following should be given the HIGHEST priority in the system's design to ensure ethical decision-making and prevent bias?

- A. Train the system to provide advisory outputs with final decisions made by human experts.
- B. Integrate a mechanism for customers to appeal decisions directly within the system.
- C. Restrict the model's decision-making criteria to objective financial metrics only.
- D. Regularly update the model with new customer data to improve prediction accuracy.

**Answer: A**

Explanation:

In AI governance frameworks, credit scoring is treated as a high-risk application. For such systems, the highest-priority safeguard is human oversight to ensure fairness, accountability, and prevention of bias in automated decisions.

The AI Security Management (AAISM) domain of AI Governance and Program Management emphasizes that high-impact AI systems require explicit governance structures and human accountability. Human-in-the-loop design ensures that final decisions remain the responsibility of human experts rather than being fully automated. This is particularly critical in financial contexts, where biased outputs can affect individuals' access to credit and create compliance risks.

Official ISACA AI governance guidance specifies:

High-risk AI systems must comply with strict requirements, including human oversight, transparency, and fairness.

The purpose of human oversight is to reduce risks to fundamental rights by ensuring humans can intervene or override an automated decision.

Bias controls are strengthened by requiring human review processes that can analyze outputs and prevent unfair discrimination.

Why other options are not the highest priority:

A). Regular updates improve accuracy but do not guarantee fairness or ethical decision-making. Model drift can introduce new bias if not governed properly.

B). Appeals mechanisms are important for accountability, but they operate after harm has occurred.

Governance frameworks emphasize prevention through human oversight in the decision loop.

D). Restricting criteria to "objective metrics" is insufficient, as even objective data can contain hidden proxies for protected attributes.

Bias mitigation requires monitoring, testing, and human oversight, not only feature restriction.

AAISM Domain Alignment:

Domain 1 - AI Governance and Program Management: Ensures accountability, ethical oversight, and governance structures.

Domain 2 - AI Risk Management: Identifies and mitigates risks such as bias, discrimination, and lack of transparency.

Domain 3 - AI Technologies and Controls: Provides the technical enablers for implementing oversight mechanisms and bias detection tools.

References from AAISM and ISACA materials:

AAISM Exam Content Outline - Domain 1: AI Governance and Program Management (roles, responsibilities, oversight).

ISACA AI Governance Guidance (human oversight as mandatory in high-risk AI applications).

Bias and Fairness Controls in AI (human review and intervention as a primary safeguard).

### NEW QUESTION # 37

An organization uses an AI tool to scan social media for product reviews. Fraudulent social media accounts begin posting negative reviews attacking the organization's product. Which type of AI attack is MOST likely to have occurred?

- A. Deepfake
- B. Data poisoning
- C. Model inversion
- D. Availability attack

**Answer: D**

Explanation:

The AAISM materials classify availability attacks as attempts to disrupt or degrade the functioning of an AI system so that its outputs become unreliable or unusable. In this scenario, the fraudulent social media accounts are deliberately overwhelming the AI tool with misleading negative reviews, undermining its ability to deliver accurate sentiment analysis. This aligns directly with the concept of an availability attack. Model inversion relates to reconstructing training data from outputs, deepfakes involve synthetic content generation, and data poisoning corrupts the training set rather than manipulating inputs at runtime. Therefore, the fraudulent review campaign is most accurately identified as an availability attack.

### NEW QUESTION # 38

Which of the following controls BEST mitigates the inherent limitations of generative AI models?

- A. Classifying and labeling AI systems
- B. Reverse engineering the models
- C. Ensuring human oversight
- D. Adopting AI-specific regulations

**Answer: C**

Explanation:

The AAISM governance framework emphasizes that the inherent limitations of generative AI—including hallucinations, bias, and unpredictability—are best mitigated by human oversight. Human-in-the-loop review ensures that outputs are validated before being used in sensitive or high-risk contexts. Regulatory adoption, system classification, and reverse engineering all play supporting roles but do not directly safeguard against the model's inherent unpredictability. Governance best practices highlight human oversight as the critical safeguard.

### NEW QUESTION # 39

A CISO has been tasked with providing key performance indicators (KPIs) on the organization's newly launched AI chatbot. Which of the following are the BEST metrics for the CISO to recommend?

- A. Explainability and F1 score
- B. Customer effort score and user retention rate
- C. Response time and throughput
- D. Error rate and bias detection

**Answer: D**

Explanation:

For executive security and governance reporting, AAISM prioritizes risk- and harm-oriented KPIs that reflect safety, reliability, and responsible behavior of AI systems. Error rate (safety/quality signal) and bias detection (fairness/compliance signal) provide leading indicators of model risk, potential user harm, and regulatory exposure-key interests for a CISO. Explainability and F1 (A) are model performance

/interpretability metrics; customer effort/retention (B) are business CX metrics; response time/throughput (C) are operational SRE metrics. While valuable, they are secondary to risk-centric KPIs for CISO oversight.

#### NEW QUESTION # 40

A security assessment revealed that attackers could access sensitive company data through chat interface injection. What is the BEST mitigation?

- A. Manually reviewing AI model outputs
- B. Ensuring continuous monitoring and tagging
- **C. Implementing input validation and templates**
- D. Conducting regular security audits

**Answer: C**

Explanation:

AAISM explains that prompt injection attacks are best mitigated by:

\* strict input validation

\* templated prompts

\* controlled context windows

\* guardrail enforcement

These prevent malicious instructions from overriding system prompts.

Audits (A) are periodic, not preventive. Manual review (B) is not scalable. Monitoring (D) detects issues but does not block injection.
