

JN0-481 Questions - Highly Recommended By Professionals

BONUS!!! Download part of VCETorrent JN0-481 dumps for free: https://drive.google.com/open?id=18Hoz6g3driPKYhrDtB_Z3okQiahWvDEN

Among all learning websites providing IT certification JN0-481 dumps and training methods, whose JN0-481 exam dumps and training materials are the most reliable? Of course, JN0-481 exam dumps and certification training questions on VCETorrent site are the most reliable. Our VCETorrent have professional team, certification experts, technician and comprehensive language master, who always research the Latest JN0-481 Exam Dumps and update JN0-481 certification training material, so you can be fully sure that our JN0-481 test training materials can help you pass the JN0-481 exam.

The Juniper JN0-481 certification is important for those who desire to advance their careers in the tech industry. They are also aware that receiving this certificate requires passing the Juniper JN0-481 exam. Due to poor study material choices, many of these test takers are still unable to receive the Juniper JN0-481 credential.

Reliable Juniper JN0-481 Exam Tutorial, JN0-481 Practice Engine

Our team of professionals and experts has prepared JN0-481 vce dumps by keeping the vigilant eyes on the current exam information and exam requirements. In case you failed exam with our JN0-481 study guide we will get you 100% money back guarantee and you can contact our support if you have any questions about our JN0-481 Real Dumps. We will be your support when you need us anytime.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q50-Q55):

NEW QUESTION # 50

Which three statements describe intent-based analytics? (Choose three.)

- A. It indicates when device operating versions require updating.
- B. It alerts the network operator when network performance moves away from the baseline.

- C. It is used to establish network performance baselines.
- D. It is a real-time information processing pipeline.
- E. It collects information from vendor websites.

Answer: B,C,D

Explanation:

Intent-based analytics (IBA) is a feature of Juniper Apstra that allows you to combine intent from the network design with current and historic data from devices to reason about the network at- large.

IBA has the following characteristics:

It is a real-time information processing pipeline. This means that IBA can ingest, process, and analyze large amounts of data from devices in real time, using agents and probes.

Agents are software components that collect data from devices and send them to the Apstra server.

Probes are user-defined queries that aggregate data across devices and generate advanced data that can be more easily reasoned about.

It is used to establish network performance baselines. This means that IBA can use the advanced data to measure and monitor the network performance against the expected outcomes and service levels.

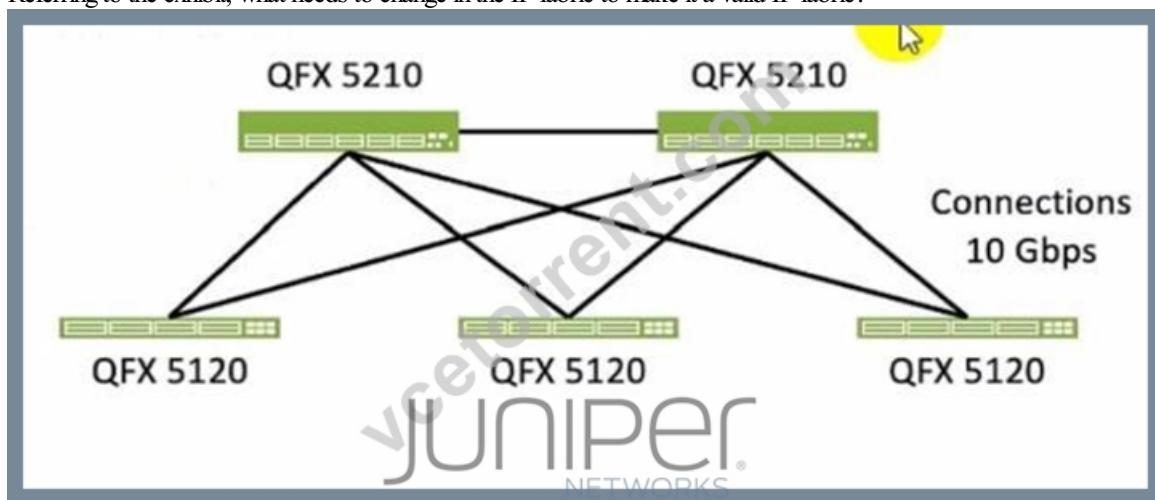

IBA can also use the historic data to create baselines that represent the normal behavior and state of the network.

It alerts the network operator when network performance moves away from the baseline. This means that IBA can detect and report any anomalies or deviations from the baseline or the intent in the network.

IBA can also provide insights and recommendations for troubleshooting and resolving the issues.

NEW QUESTION # 51

Referring to the exhibit, what needs to change in the IP fabric to make it a valid IP fabric?

- A. The IP fabric must consist of only one device model throughout the fabric.
- B. **The connection between the two spine nodes must be removed.**
- C. The IP fabric connections must be increased to a speed greater than 10 Gbps.
- D. The connection between the two spine nodes must be increased to 40 Gbps.

Answer: B

Explanation:

To make the IP fabric a valid IP fabric, the connection between the two spine nodes must be removed. This is because an IP fabric is a network topology that uses a spine-leaf architecture, where the spine devices are only connected to the leaf devices, and the leaf devices are only connected to the spine devices. This creates a non-blocking, high-performance, and scalable network that supports Layer 3 routing protocols such as BGP or OSPF. The connection between the two spine nodes in the exhibit violates the spine-leaf design principle and introduces unnecessary complexity and potential loops in the network.

NEW QUESTION # 52

Which two statements are correct about the graph query output shown in the exhibit? (Choose two.)

```

{
  "count": 1,
  "items": [
    {
      "interface": {
        "id": "007eae-d691-44ff-aec7-da4fb2836555",
        "type": "interface",
        "label": null,
        "NETWORKS": null,
        "description": "to.cf-l2-esi-access",
        "evpn_esi_mac": null,
        "if_name": "ae2",
        "if_type": "port_channel",
        "ipv4_addr": null,
        "ipv4_addr_type": null,
        "ipv4_enabled": null,
        "ipv6_addr": null,
        "ipv6_addr_type": null,
        "ipv6_enabled": null,
        "lag_mode": "lacp_active",
        "loopback_id": null,
        "mlag_id": null,
        "mode": null,
        "po_control_protocol": null,
        "port_channel_id": 2,
        "property_set": null,
        "protocols": null,
        "ref_count": null,
        "subintf_id": null,
        "tags": null,
        "vlan_id": null
      }
    }
  ]
}

```

- A. The output shows a LAG connection.
- B. The interface has tags assigned to it.
- C. The switch in the output is a Juniper device.
- D. The interface has an IP address assigned to it.

Answer: A,C

Explanation:

The graph query output shown in the exhibit is a JSON representation of an interface node and its properties in the Apstra graph database. Based on the output, we can infer the following statements:

The output shows a LAG connection. This is true because the interface node has a property called `lag_mode` which is set to `lacp_active`, indicating that the interface is part of a link aggregation group (LAG) that uses the Link Aggregation Control Protocol (LACP) to negotiate the link state and parameters.

The switch in the output is a Juniper device. This is true because the interface node has a property called `if_name` which is set to `ae`, indicating that the interface name follows the Juniper naming convention for aggregated Ethernet interfaces.

The interface has an IP address assigned to it. This is false because the interface node has properties called `ipv4_addr` and `ipv6_addr` which are both set to `null`, indicating that the interface does not have any IPv4 or IPv6 address configured.

The interface has tags assigned to it. This is false because the interface node has a property called `tags` which is set to `null`, indicating that the interface does not have any tags associated with it.

NEW QUESTION # 53

Referring to the exhibit, how do you display the IPv6 subnets for all of the listed VXLANs?

Query: All 1-17 of 17 Columns (9/11) Page Size: 25

Filter selected by all selected only unselected only

Selected	Name	Routing Zone	Type	VNIID	Assigned to	DHCP Service	IPv4 Connectivity	IPv4 Subnet	Actions
	vlan_30_leaf3_v4	default	VLAN	30	1 nodes	Enabled	Enabled	10.1.3.0/24	
	red_vxlan_41_v4_0ne_sp	red	VXLAN	30011	2 nodes	Enabled	Enabled	10.1.15.0/24	
	red_vxlan_41_v4_0ne_sp	red	VXLAN	30010		Enabled	Enabled	10.1.14.0/24	

- A. Select all VXLANs, and the IPv6 Subnets column will appear
- B. IPv6 subnets are shown when each VXLAN is selected individually.
- C. Select Columns, then select IPv6 Subnet.**
- D. An IPv6 Subnets column is not shown, indicating that no VXLAN has an assigned IPv6 subnet

Answer: C

Explanation:

Referring to the exhibit, the image shows a user interface of the Juniper Apstra software application, which is used for network management and configuration. The image shows the Virtual Networks table under the Resources menu, which displays the details of the VLANs and VXLANs in the network. The table has 11 columns, but only 9 are visible in the image. The other two columns are IPv6 Connectivity and IPv6 Subnet, which are hidden by default. To display the IPv6 subnets for all of the listed VXLANs, the user needs to select Columns, then select IPv6 Subnet. This will show the IPv6 Subnet column in the table, which will display the IPv6 addresses assigned to the VXLANs from the IPv6 pools. For more information, see Virtual Networks (Resources).

NEW QUESTION # 54

Using Juniper Apstra. which component is defined in a template?

- A. the speed of the links between the spine devices and the leaf devices
- B. the leaf-to-spine interconnection**
- C. the number of spine devices in a topology
- D. the definition of IP pools

Answer: B

Explanation:

A template is a configuration template that defines a network's policy intent and structure. A template can be either rack-based or pod-based, depending on the type and number of racks and pods in the network design. A template includes the following details: Policies: These are the parameters that apply to the entire network, such as the overlay control protocol, the ASN allocation scheme, and the underlay type.

Structure: This is the physical layout of the network, such as the type and number of racks, pods, spines, and leaves. The structure also defines the leaf-to-spine interconnection, which is the number and type of links between the leaf and spine devices. The leaf-to-spine interconnection can be either single or dual, depending on the redundancy and bandwidth requirements.

Therefore, the correct answer is A. the leaf-to-spine interconnection. This is a component that is defined in a template, as it determines the physical connectivity of the network. The speed of the links, the number of spine devices, and the definition of IP pools are not components that are defined in a template, as they are either derived from the device profiles, the resource pools, or the blueprint settings.

NEW QUESTION # 55

.....

VCETorrent Juniper JN0-481 exam training materials praised by the majority of candidates is not a recent thing. This shows VCETorrent Juniper JN0-481 exam training materials can indeed help the candidates to pass the exam. Compared to other

questions providers, VCETorrent Juniper JN0-481 exam training materials have been far ahead. Questions broad consumer recognition and reputation, it has gained a public praise. If you want to participate in the Juniper JN0-481 Exam, quickly into VCETorrent website, I believe you will get what you want. If you miss you will regret, if you want to become a professional IT expert, then quickly add it to cart.
