Quiz 2026 SC-300: Efficient Microsoft Identity and Access Administrator Latest Test Vce

All-in-One Exam Guide Practice To your SC-300 Exam. To meet this objective Pass4sures is offering valid, updated, and real SC-300 exam practice test questions in their formats.. Download SC-300 study guide pdf, pass Microsoft Identity and Access Administrator exam with full refund guarantee! Success Microsoft exam with SC-300 Exam Questions which has high pass rate. Use free SC-300 certification questions to gain a good test result.

Microsoft Identity and Access Administrator Sample Questions (Q248-Q253):

NEW QUESTION # 248
You have a Microsoft 365 tenant.
All users must use the Microsoft Authenticator app for multi-factor authentication (MFA) when accessing Microsoft 365 services.
Some users report that they received an MFA prompt on their Microsoft Authenticator app without initiating a sign-in request.
You need to block the users automatically when they report an MFA request that they did not Initiate.
Solution: From the Azure portal, you configure the Fraud alert settings for multi-factor authentication (MFA).
Does this meet the goal?

- A. No
- B. Yes

Answer: B

Explanation:
Azure AD MFA Fraud alert is explicitly documented in the SC-300 content as the control to combat push- bombing. The documentation explains: "Enable Fraud alert so users can report unexpected MFA prompts; when configured to block the user, Azure AD marks the user as blocked automatically upon the fraud report." It also notes: "The block remains in effect (default 90 days) until an administrator unblocks the user." This directly satisfies the requirement to automatically block users when they report that they did not initiate the sign-in. Other MFA configurations-such as account lockout thresholds-address repeated denial

scenarios and rate-limiting but do not trigger an immediate block as a result of a user's fraud report. Configuring Fraud alert therefore meets the goal exactly, aligning with SC-300's best-practice guidance for protecting users from unsolicited MFA prompts.

NEW QUESTION # 249

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it as a result these questions will not appear in the review screen.

You have a Microsoft 365 ES subscription.

You create a user named User1.

You need to ensure that User1 can update the status of identity Secure Score improvement actions.

Solution: You assign the Exchange Administrator role to User1.

- A. No
- B. Yes

Answer: A

NEW QUESTION # 250

You have an Azure AD tenant that contains a user named User1. User1 is assigned the User Administrator role.

You need to configure External collaboration settings for the tenant to meet the following requirements: |

*Guest users must be prevented from querying staff email addresses.

*Guest users must be able to access the tenant only if they are invited by User1.

Which three settings should you configure? To answer, select the appropriate settings in the answer area.

Answer:

Explanation:

Explanation:
According to the Microsoft SC-300 Study Guide, Exam Ref SC-300, and Microsoft Entra External Collaboration (B2B) documentation, the configuration of External collaboration settings in Azure AD determines how guest users can access directory data and who can invite them into the tenant.
Let's analyze each requirement in context:
"Guest users must be prevented from querying staff email addresses."
To achieve this, Azure AD provides the setting Guest user access restrictions, which defines what a guest can see in the directory. The most restrictive setting ensures that guest users can only see their own profile details and no other users or groups.
Therefore, select:
"Guest user access is restricted to properties and memberships of their own directory objects (most restrictive)." This prevents guests from discovering internal directory data such as email addresses of staff members or group memberships.
"Guest users must be able to access the tenant only if they are invited by User1." User1 has the User Administrator role. This role is included among the "specific admin roles" allowed to invite guest users when the setting is configured appropriately.
To meet the requirement that only User1 (or other admins) can invite guests, you must configure:
"Only users assigned to specific admin roles can invite guest users." This restricts invitation privileges to admin roles (such as Global Administrator, User Administrator, etc.) and prevents ordinary users or guests from inviting others.
"Guests should not be able to self-enroll."
Azure AD B2B allows self-service sign-up through user flows (Identity Experience Framework). Enabling this feature would let external users sign up themselves - which violates the condition that guests must be invited by User1 only.
Therefore, set Enable guest self-service sign-up via user flows = No.
Setting
Value
Guest user access restrictions
Guest user access is restricted to properties and memberships of their own directory objects (most restrictive) Guest invite restrictions Only users assigned to specific admin roles can invite guest users Enable guest self-service sign-up via user flows No
Microsoft Official Documentation Reference (SC-300 Content):
"To prevent guests from seeing other users in the directory, configure guest user access restrictions to 'most restrictive.' To control who can invite guests, use the setting that limits invitations to users with admin roles.
To disallow self-service guest access, disable user flows for external sign-up."

NEW QUESTION # 251
You have a Microsoft 36S tenant.
You create a named location named HighRiskCountries that contains a list of high-risk countries.
You need to limit the amount of time a user can stay authenticated when connecting from a high-risk country.
What should you configure in a conditional access policy? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 252
You have an Azure subscription that contains a user named User1. You need to meet the following requirements:
* Prevent User1 from being added as an owner of newly registered apps.
* Ensure that User1 can manage the application proxy settings.
* Ensure that User2 can register apps.

* Use the principle of least privilege.
Which role should you assign to User1?

- A. Application developer
- B. Service support administrator
- C. Cloud application administrator
- D. Application administrator

Answer: D

NEW QUESTION # 253

......

Our SC-300 learning materials promise you that we will never disclose your privacy or use it for commercial purposes.
