

# Trustable Juniper JN0-481 Latest Braindumps | Try Free Demo before Purchase

P.S. Free 2026 Juniper JN0-481 dumps are available on Google Drive shared by TroytecDumps: <https://drive.google.com/open?id=14ZuV-qgLMrKr5HIzXYM9piNIYdjIUD6G>

To keep the JN0-481 practice questions in Juniper PDF format up to date, we regularly update them to according to changes in the real JN0-481 exam content. This dedication to keep Data Center, Specialist (JNCIS-DC) (JN0-481) exam questions relevant to the JN0-481 actual test domain ensures that customers always get the most up-to-date Juniper JN0-481 questions from TroytecDumps.

We can guarantee that you are able not only to enjoy the pleasure of study but also obtain your Juniper JN0-481 certification successfully, which can be seen as killing two birds with one stone. And you will be surprised to find our superiorities of our Juniper JN0-481 Exam questions than the other vendors.

## Valid JN0-481 Exam Camp & Practice JN0-481 Mock

Get benefits from TroytecDumps exam questions update offer and prepare well with the assistance of Juniper JN0-481 updated exam questions. The Juniper JN0-481 exam dumps are being offered at affordable charges. We guarantee you that the JN0-481 Exam Dumps prices are entirely affordable for every JN0-481 exam candidate.

## Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q51-Q56):

### NEW QUESTION # 51

You want to make a widget appear on the main dashboard in Juniper Apstr

- A. Set the Default toggle switch to On for the desired widget.
- B. In this scenario, which statement is correct?
- C. When creating the widget, select the Add to Blueprint Dashboard option.
- D. On the blueprint dashboard, click on the Add Widget option.
- E. Widgets automatically appear on the blueprint dashboard.

Answer: E

Explanation:

In Juniper Apstra, a widget is a graphical element that displays data from an intent-based analytics (IBA) probe. A widget can be used to monitor different aspects of the network and raise alerts to any anomalies. A widget can be viewed by itself or added to an analytics dashboard. A dashboard is a collection of widgets that can be customized and organized according to the user's preference. The main dashboard in Juniper Apstra is the blueprint dashboard, which is the default view that shows the network information and configuration for the active blueprint. A blueprint is a logical representation of the network design and intent. The blueprint dashboard can display the system-generated dashboards, the user-generated dashboards, and the individual widgets that are relevant to the network.

To make a widget appear on the main dashboard in Juniper Apstra, the user needs to set the Default toggle switch to On for the desired widget. This will add the widget to the blueprint dashboard, where it can be viewed along with other network information. The user can also remove the widget from the blueprint dashboard by setting the Default toggle switch to Off for the widget.

#### NEW QUESTION # 52

The analytics probe shown in the exhibit is enabled.

The ge-0/0/5 interface on the my-esl-001-leaf1 node receives an average of greater than 1 Mbps of traffic. Which two statements are correct in this scenario? (Choose two.)

- A. The indicator for the Analytics tab in the blueprint will turn red.
- B. A service anomaly will be raised.
- C. The indicator for the Active tab in the blueprint will turn red.
- D. A probe anomaly will be raised.

Answer: A,D

Explanation:

In Apstra 5.1, an IBA probe is a defined analytics pipeline that applies to a scoped set of graph objects (here, interfaces) and evaluates telemetry against logic defined in its processors. The exhibit shows a probe that consumes Interface Counters Average and then applies a Range processor. In the processor configuration, the Anomalous Range is set to "greater than 1,000,000" (bytes per second-equivalent for ~1 Mbps depending on the probe's metric definition), and Raise Anomaly is set to True. Therefore, when ge-0/0/5 receives an average traffic level above the configured threshold, the probe's condition evaluates as anomalous and Apstra raises a probe anomaly for that interface. That makes statement A correct.

When probe anomalies are raised, Apstra surfaces them in the blueprint's Analytics area because they are analytics-derived findings (as opposed to configuration drift or deployment workflow issues). As a result, the blueprint's Analytics tab indicator changes state (commonly to red with a badge count) to signal active analytics anomalies requiring attention. That makes statement B correct. This event is not classified as a service anomaly (which is associated with higher-level service intent/assurance objects) unless separately mapped by policy/logic, and it does not primarily drive the Active tab indicator, which is focused on operational state views rather than being the primary alert surface for IBA probe anomalies.

#### NEW QUESTION # 53

Referring to the exhibit, when you create the virtual network, which other component is automatically created by Juniper Apstra?

- A. connectivity template
- B. routing zone
- C. IP pool
- D. VLAN pool

Answer: A

Explanation:

As shown in the exhibit, the "Create Connectivity Templates for" option is checked (for Untagged), which means Juniper Apstra will automatically generate a connectivity template along with the creation of the virtual network. This template allows the new virtual network to be easily applied to interfaces across the fabric.

#### NEW QUESTION # 54

Which Root Cause Identifier is currently supported in Juniper Apstra software?

- A. Connectivity

- B. ESI imbalance
- C. BGP
- D. Virtual network

**Answer: A**

Explanation:

In Juniper Apstra 5.1, Root Cause Identification (RCI) is implemented with a currently supported model focused on connectivity. Practically, this means RCI is designed to take telemetry and state learned from the fabric (for example, interface operational status, LLDP neighbor information, and routing session status) and correlate those signals to determine the most likely underlying cause of a connectivity-impacting event. Within an EVPN-VXLAN IP fabric, many operational symptoms can appear similar at the service layer (endpoints cannot reach each other, routes disappear, overlays degrade), but RCI narrows the problem by correlating evidence across the underlay and control plane.

The "connectivity" RCI model targets common failure scenarios that directly break device-to-device reachability, such as a broken link, a miscabled link (wrong LLDP neighbors), or an operator-disabled interface. These conditions often cascade into higher-level symptoms, including BGP sessions dropping over affected links. With Junos v24.4-based leaf-spine fabrics, maintaining stable underlay connectivity is foundational for EVPN signaling and VXLAN forwarding; therefore, Apstra's connectivity-focused RCI helps operators rapidly isolate whether the primary fault lies in physical adjacency, cabling/neighbor correctness, or administrative shutdown-reducing mean time to repair by pointing to the most probable root cause rather than only listing alarms.

#### NEW QUESTION # 55

In Juniper Apstra's role-based access control, what do tenant permissions determine?

- A. A device profile a user can administer.
- **B. A specific virtual network that a user can administer.**
- C. A user can edit a routing zone.
- D. A blueprint security policy a user can administer.

**Answer: B**

Explanation:

In Juniper Apstra's Role-Based Access Control (RBAC), tenant permissions determine which virtual networks a user can administer. This provides fine-grained control over what elements within a multi-tenant environment a user can view or modify. Each tenant is associated with specific virtual networks, and users with tenant permissions can only manage those assigned segments.

#### NEW QUESTION # 56

.....

However, when asked whether the JN0-481 latest dumps are reliable, costumers may be confused. For us, we strongly recommend the JN0-481 exam questions compiled by our company, here goes the reason. On one hand, our JN0-481 test material owns the best quality. When it comes to the study materials selling in the market, qualities are patchy. But our Juniper test material has been recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our JN0-481 Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.

**Valid JN0-481 Exam Camp:** <https://www.troytecdumps.com/JN0-481-troytec-exam-dumps.html>

Juniper JN0-481 Latest Braindumps Real Questions and Answers Practice Mode, If you decide to purchase our JN0-481 quiz guide, you can download the app of our products with no worry, The candidates can practice our Valid JN0-481 Exam Camp - Data Center, Specialist (JNCIS-DC) useful learning pdf in computer, mobile and learning platform, Our JN0-481 exam software will test the skills of the customers in a virtual exam like situation and will also highlight the mistakes of the candidates.

The shift to electric cars, Our system will automatically deliver the newest version of our JN0-481 exam questions to your via email after you pay for them, Real Questions and Answers Practice Mode.

### **100% Pass Quiz Juniper - High Hit-Rate JN0-481 - Data Center, Specialist (JNCIS-DC) Latest Braindumps**

If you decide to purchase our JN0-481 Quiz guide, you can download the app of our products with no worry, The candidates can

practice our Data Center, Specialist (JNCIS-DC) useful learning pdf in computer, mobile and learning platform.

Our JN0-481 exam software will test the skills of the customers in a virtual exam like situation and will also highlight the mistakes of the candidates, With the Data Center, Specialist (JNCIS-DC) JN0-481 exam questions, you will get the opportunity to download the updated and real Data Center, Specialist (JNCIS-DC) JN0-481 exam practice questions.
