What's more, part of that TestKingFree CIPT dumps now are free: <https://drive.google.com/open?id=1csgmu1xUPSXnXPkej0Ou3c10aeOsuzL0>

You won't need anything else if you prepare for the exam with our IAPP CIPT Exam Questions. Our experts have prepared IAPP CIPT dumps questions that will eliminate your chances of failing the exam. We are conscious of the fact that most of the candidates have a tight schedule which makes it tough to prepare for the IAPP CIPT Exam Preparation.

The CIPT certification exam covers a broad range of topics such as privacy laws and regulations, data protection frameworks, security technologies, data breaches, and risk management. Candidates who pass the exam demonstrate a thorough understanding of how to implement and manage privacy and data protection programs in their organizations. CIPT exam is ideal for IT professionals, data analysts, software developers, security professionals, and other professionals who work with personal data on a daily basis. It is also suitable for individuals who are looking to enhance their knowledge and skills in data privacy and protection to advance their careers.

The CIPT Certification Exam covers various aspects of privacy management, including data protection regulations, privacy program management, and information security. It is an essential certification for professionals who work with personal data, such as data protection officers, privacy officers, privacy consultants, and IT professionals. Certified Information Privacy Technologist (CIPT) certification validates the knowledge and skills of professionals in managing and protecting personal data in their organizations.

NEW QUESTION # 26

SCENARIO

Wesley Energy has finally made its move, acquiring the venerable oil and gas exploration firm Lancelot from its long-time owner David Wilson. As a member of the transition team, you have come to realize that Wilson's quirky nature affected even Lancelot's data practices, which are maddeningly inconsistent. "The old man hired and fired IT people like he was changing his necktie," one of Wilson's seasoned lieutenants tells you, as you identify the traces of initiatives left half complete.

For instance, while some proprietary data and personal information on clients and employees is encrypted, other sensitive information, including health information from surveillance testing of employees for toxic exposures, remains unencrypted, particularly when included within longer records with less-sensitive data. You also find that data is scattered across applications, servers and facilities in a manner that at first glance seems almost random.

Among your preliminary findings of the condition of data at Lancelot are the following:

Cloud technology is supplied by vendors around the world, including firms that you have not heard of. You are told by a former Lancelot employee that these vendors operate with divergent security requirements and protocols.

The company's proprietary recovery process for shale oil is stored on servers among a variety of less-sensitive information that can be accessed not only by scientists, but by personnel of all types at most company locations.

DES is the strongest encryption algorithm currently used for any file.

Several company facilities lack physical security controls, beyond visitor check-in, which familiar vendors often bypass.

Fixing all of this will take work, but first you need to grasp the scope of the mess and formulate a plan of action to address it.

Which is true regarding the type of encryption Lancelot uses?

- A. It is a data masking methodology.
- B. It employs the data scrambling technique known as obfuscation.
- C. It uses a single key for encryption and decryption.
- D. Its decryption key is derived from its encryption key.

Answer: B

NEW QUESTION # 27

SCENARIO

Please use the following to answer the next questions:

Your company is launching a new track and trace health app during the outbreak of a virus pandemic in the US. The developers claim the app is based on privacy by design because personal data collected was considered to ensure only necessary data is captured, users are presented with a privacy notice, and they are asked to give consent before data is shared. Users can update their consent after logging into an account, through a dedicated privacy and consent hub. This is accessible through the 'Settings' icon from any app page, then clicking 'My Preferences', and selecting 'Information Sharing and Consent' where the following choices are displayed:

* "I consent to receive notifications and infection alerts";

* "I consent to receive information on additional features or services, and new products";

* "I consent to sharing only my risk result and location information, for exposure and contact tracing purposes";

* "I consent to share my data for medical research purposes"; and

* "I consent to share my data with healthcare providers affiliated to the company".

For each choice, an ON* or OFF tab is available The default setting is ON for all Users purchase a virus screening service for USS29 99 for themselves or others using the app The virus screening service works as follows:

* Step 1 A photo of the user's face is taken.

* Step 2 The user measures their temperature and adds the reading in the app

* Step 3 The user is asked to read sentences so that a voice analysis can detect symptoms

* Step 4 The user is asked to answer questions on known symptoms

* Step 5 The user can input information on family members (name date of birth, citizenship, home address, phone number, email and relationship). The results are displayed as one of the following risk status "Low. "Medium" or "High" if the user is deemed at "Medium " or "High" risk an alert may be sent to other users and the user is Invited to seek a medical consultation and diagnostic from a healthcare provider.

A user's risk status also feeds a world map for contact tracing purposes, where users are able to check if they have been or are in dose proximity of an infected person If a user has come in contact with another individual classified as 'medium' or 'high' risk an instant notification also alerts the user of this. The app collects location trails of every user to monitor locations visited by an infected individual Location is collected using the phone's GPS functionary, whether the app is in use or not however, the exact location of the user is 'blurred' for privacy reasons Users can only see on the map circles What is likely to be the biggest privacy concern with the current 'Information Sharing and Consent' page?

- A. The option to consent to receive potential marketing information.
- **B. The ON or OFF default setting for each item.**
- C. The information sharing with healthcare providers affiliated with the company.
- D. The navigation needed in the app to get to the consent page.

Answer: B

Explanation:

The biggest privacy concern with the current 'Information Sharing and Consent' page is that all consent options are set to ON by default. According to privacy by design principles and data protection regulations, such as the General Data Protection Regulation (GDPR), consent should be freely given, specific, informed, and unambiguous. Pre-ticked boxes do not constitute valid consent because they do not provide a clear affirmative action from the user. The default ON setting could lead to unintentional data sharing and potential privacy breaches, making this a significant concern.
