SAP C_SIGVT_2506 시험요강:

주제	소개
주제 1	Exploring the SAP Business Transformation Methodology: This section of the exam measures the skills of Transformation Consultants and introduces SAP structured methodology for guiding organizations through transformation programs. It covers the stages, principles, and frameworks used to support business evolution, ensuring candidates understand how SAP's methodology enables structured planning, execution, and adoption across transformation lifecycles.
주제 2	Using LeanIX for Enterprise Architecture Validation: This section of the exam measures the abilities of Enterprise Architects and focuses on using LeanIX to validate architecture landscapes. It includes understanding how LeanIX maps applications, data, and business capabilities to support modernization efforts. The domain emphasizes validating architecture readiness and ensuring that the existing IT landscape aligns with transformation goals.
주제 3	Validating Business Processes with SAP Signavio: This section of the exam measures the skills of Business Process Analysts and covers the use of SAP Signavio to evaluate, analyze, and validate business processes during transformation projects. It focuses on understanding how process insights support decision-making and how Signavio helps identify gaps between current operations and desired outcomes. The section ensures candidates can apply Signavio tools to support business process optimization.

주제 4	Exploring SAP Cloud Strategy: This section of the exam measures the skills of Cloud Strategy Analysts and focuses on SAP overall cloud vision, deployment models, and strategic direction. It includes understanding the value of cloud adoption, SAP portfolio of cloud solutions, and how organizations benefit from modern cloud architectures. The section validates foundational knowledge of SAP cloud ecosystem and its relevance to transformation.
주제 5	Monitoring Transformation Progress using SAP Cloud ALM: This section of the exam measures the capabilities of Cloud ALM Specialists and covers the use of SAP Cloud ALM to track project progress and operational performance. It explains how Cloud ALM supports implementation tasks, monitors system health, and provides visibility into key milestones. Candidates learn how to use the platform to support continuous governance and ensure transformation activities remain on track.

질문 # 12

What is the function of WalkMe in the toolchain?

- A. Providing user guidance and enablement
- B. Supporting interface testing
- C. Automating data backup
- D. Supporting test automation

정답: A

설명:

WalkMe is an end-user enablement tool integrated into SAP transformation programs to ensure smooth adoption and reduce user learning challenges. It provides interactive guidance, on-screen instructions, and automated walkthroughs directly within the SAP application interface. This allows users to follow step-by- step workflows while performing tasks in real time, significantly improving their ability to adapt to new processes and system changes introduced during transformation.

During deployments, WalkMe accelerates onboarding by reducing training time and minimizing errors. It also supports change management by ensuring that process updates or new functionalities are clearly communicated. Instead of relying on static documentation, users receive dynamic, context-aware guidance.

WalkMe does not perform test automation (A) or interface testing (B), which are functions handled by other tools such as Tricentis. It also does not manage data backups (C). Its purpose within the RISE with SAP and Activate methodologies is to providein-application guidance, digital adoption support, and user empowerment, ensuring that business users can navigate redesigned processes confidently and efficiently.

질문 # 13

Which of the following are dimensions of the clean core concept?

(3 correct answers)

- A. Integrations
- B. Configurations
- C. Applications
- D. Operations
- E. Processes

정답: A,B,E

설명:

The clean core concept is fundamental to SAP's cloud strategy and governs how organizations should structure their ERP systems to remain flexible, upgradeable, and stable. One key dimension is Configurations, which must follow SAP-recommended patterns and avoid unnecessary customizations that compromise upgradeability. Configurations define how the system behaves, and keeping them standardized ensures that the core can remain clean. A second dimension is Integrations. Clean core principles emphasize using SAP-approved integration patterns, APIs, and event-driven models rather than modifying the underlying system. By handling extensions and integrations through platforms like SAP Business Technology Platform, organizations avoid invasive changes that would otherwise jeopardize upgrades or system stability. A third dimension is Processes, referring to the ability to adopt SAP's standard end-to-end processes wherever possible. Aligning with SAP best practices minimizes the need for enhancements in the core system and ensures compatibility with future innovations. Applications and operations are not part of the formal clean core dimensions; rather, they are broader parts of the overall IT landscape. The clean core dimensions focus specifically on system configuration, integration behavior, and business process alignment—ensuring that SAP systems remain cloud-ready and agile.

질문 # 14

What is the RISE with SAP Methodology Dashboard used for?

- A. Displaying SAP S/4HANA Roadmaps
- B. Showing clean core status and extensibility KPIs
- C. Managing project methodologies
- D. Displaying ERP licensing data

정답: C

질문 # 15

SAP LeanIX Fact Sheets can represent which of the following?

- A. Audit logs
- B. Survey forms
- C. RACI matrices
- D. Applications, interfaces, and capabilities

정답: D

설명:

Fact Sheets are the central information objects used in SAP LeanIX. They document key architectural components such as applications, interfaces, and business capabilities. Each Fact Sheet provides lifecycle details, ownership, dependencies, and relationships to other IT and business elements. This structure enables organizations to maintain a clear and consistent representation of their enterprise architecture. Survey forms, audit logs, or RACI matrices are not core Fact Sheet types.

질문 # 16

What is the SAP Readiness Check used for?

- A. Measuring test coverage
- B. Forecasting project revenue
- C. Verifying SAP license usage
- D. Assessing the landscape's readiness for transformation

정답: D
