Salesforce Certified Platform Development Lifecycle and Deployment Architect Sample Questions (Q197-Q202):

NEW QUESTION # 197

Universal Containers has a highly integrated environment with significant process orchestration between systems. When refreshing UAT, Objects that have external Ids from Production no longer point to valid External Ids in the UAT environment.

What should an Architect do to resolve this?

- A. Delete all the data and use an Automated testing tool to create new data across all the systems in UAT.
- B. Let UAT point to production integrations and rollback each transaction after it finishes.
- **C. In the post refresh plan, modify external ids to a known valid set of values for UAT.**
- D. Mask the External Id so nobody can see the production value.

Answer: C

NEW QUESTION # 198

Universal Containers (UC) has a huge volume of metadata that cannot be deployed at once. What is the recommended strategy for UC to be successful with the deployment?

- A. Use a combination of the Ant migration tool and change sets for deployment.
- **B. Identify metadata dependencies, create logical groupings, and deploy in the right order.**
- C. Sort and group the metadata alphabetically and deploy them in the same order.
- D. Use a continuous integration tool such as Jenkins to deploy in the right order.

Answer: B

NEW QUESTION # 199

Universal Containers (UC) is a high-tech company using SFDX tools and methodologies for its Salesforce development. T UC has moved some of its code and configuration to Unlocked Packages.

Which two best practices should an architect recommend to support UC's new package development strategy?

Choose 2 answers

- A. Move everything in the existing codebase to a single monolithic package.
- **B. Version control does not need to be used, as packages manage all the code and configuration.**
- C. Consult the metadata coverage report to identify features supported by packages.
- **D. Test developed packages in test environments before installing to production.**

Answer: B,D

NEW QUESTION # 200

Universal Containers has just initiated a project to implement a custom container tracking application with a large development team. The project manager is concerned that the large number of developers in a single developer pro sandbox could lead to challenges with code being overwritten. Which two methods should be used to mitigate this risk? Choose 2 answers

- A. Replace the developer pro sandbox with a Partial copy sandbox
- **B. Use a single sandbox and strictly coordinate development across shared components, and implement a code repository to allow developers to merge code into a common repository**
- C. Provide each developer their own sandbox developer org, and implement managed packages to deploy to the merge
- **D. Provide each developer their own sandbox developer org and implement a code repository and continuous integration to merge code into the developer pro sandbox**

Answer: B,D

NEW QUESTION # 201

There are many types of quality assurance techniques that can help minimize defects in software projects.

Which two techniques should an architect recommend, for Universal Containers to incorporate into its overall CI/CD pipeline?

Choose 2 answers

- A. Stress testing
- B. Business verification testing
- **C. Automated browser testing**
- **D. Static code quality analysis**

Answer: C,D

NEW QUESTION # 202

.....
