Valid EAEP2201 Test Forum - Latest EAEP2201 Exam Cost

To assimilate those useful knowledge better, many customers eager to have some kinds of practice materials worth practicing. All content is clear and easily understood in our EAEP2201 practice materials. They are accessible with reasonable prices and various versions for your option. All content are in compliance with regulations of the exam. As long as you are determined to succeed, our EAEP2201 Study Guide will be your best reliance

Esri Enterprise Administration Professional 2201 Sample Questions (Q35-Q40):

NEW QUESTION # 35

A client requires an ArcGIS Server site that provides the following capabilities

* Serve several cached image services Each service is published from a single raster and updated once a year with new imagery from which a new cache is generated offline before publishing

* Serve a dynamic feature class of 1,000 points coming from a PostgreSQL enterprise geodatabase Which licensing role does the client need for this ArcGIS Server site?

- A. Mission Server
- B. GIS Server
- **C. Image Server**

Answer: C

NEW QUESTION # 36

A GIS administrator must share an imagery service with another ArcGIS Enterprise. The administrator sets up a distributed collaboration with the other ArcGIS Enterprise and shares the service as a reference. The users in the other organization keep being prompted for credentials.

Which action should the administrator perform?

- A. Save viewer credentials in the collaboration
- B. Set the collaboration workspace to send and receive
- C. Configure the service with anonymous access
- **D. Share the image service as a copy**

Answer: D

NEW QUESTION # 37

An ArcGIS Enterprise deployment is completely internal and does not have access to the internet. How should the organization find patches and updates for the deployment components?

- A. Refer to the Patches and Service Pack page on the Esri Support website
- B. Open the Check For Updates option on the machine where ArcGIS Server is installed
- **C. Run the patch notification bat utility from the command line**

Answer: C

Explanation:

For environments without internet access, the organization can use the patchnotification.bat utility to check for available patches and updates. This utility can be run from the command line and provides information about the current patch status of the ArcGIS Enterprise components. Administrators can then manually download the necessary patches from another machine with internet access and transfer them to the internal environment for installation.

Reference Source: ArcGIS Enterprise documentation on checking for and installing software patches and updates

NEW QUESTION # 38

A GIS administrator must configure ArcGIS Server so that only specific groups and roles from the identity store can administer it. Which action should the administrator perform?

- A. Configure role-based access through the ArcGIS Server Manager
- B. Use a group-managed service account to administer the server
- **C. Disable the primary administrator account**
- D. Define the shared key used to generate an ArcGIS token

Answer: C

Explanation:

The primary site administrator account in ArcGIS Server is a built-in account that bypasses external identity store configurations. To ensure only users from a configured identity store (e.g., Active Directory) can administer the site, the primary site admin account must be disabled after alternative administrative access has been confirmed.

From ArcGIS Server documentation:

"After you configure your ArcGIS Server to use users and roles from an identity store (LDAP or Active Directory), you can disable the primary site administrator account to prevent bypassing the identity store."

* OptionB relates to token security, not access control.

* OptionC is about running the service securely, not defining user permissions.

Reference: ArcGIS Enterprise - Managing Access Using Identity Stores and Disabling the Primary Site Administrator Account

NEW QUESTION # 39

ArcGIS Server is installed with its Web Adaptor on the same server. The configuration is as follows:

* ArcGIS Server is federated with Portal for ArcGIS

* Portal is set up to use Integrated Windows Authentication

* The environment was set up using a domain certificate

* The attempted login account is a Windows account with admin privileges A GIS administrator tries to connect to ArcGIS Server Manager through ArcGIS Web Adaptor but the connection fails. Why did the connection fail?

- A. The certificate must come from a valid Certificate Authority and not a Domain Certificate Authority
- B. The connection must be made with an internal admin account and not a Windows account
- C. The Web Adaptor was not set to allow administrative access to the server

Answer: A

NEW QUESTION # 40

.....

You can also become part of a certified Esri professional community and achieve your career objectives in a short time period. To do this you just need to enroll in the EAEP2201 exam and put in all your efforts and prepare well to pass the EAEP2201 Certification Exam. For the instant and complete EAEP2201 exam preparation, you need to show firm commitment and dedication and get help from Real4Prep EAEP2201 practice test questions.
