

Precise New 300-415 Exam Notes | Perfect Exam 300-415 Reviews and Complete Implementing Cisco SD-WAN Solutions Best Practice

2026 Latest Pass4sureCert 300-415 PDF Dumps and 300-415 Exam Engine Free Share: https://drive.google.com/open?id=1uGCoCoDmuKHzSd1DJ3dtk3ReF_gberrG

What is your reason for wanting to be certified with 300-415? I believe you must want to get more opportunities. As long as you use 300-415 learning materials and get a 300-415 certificate, you will certainly be appreciated by the leaders. As you can imagine that you can get a promotion sooner or later, not only on the salary but also on the position, so what are you waiting for? Just come and buy our 300-415 study braindumps.

One of the concentration exams for the CCNP Enterprise certification is the Cisco ENSDWI 300-415. It is designed for network engineers, both new and experienced, to validate their skills in using Cisco's SD-WAN solution in real-world scenarios. While there aren't any official prerequisites set forth, candidates are often those with three to five years of experience in networking as reported by Cisco. It is recommended that you have a good understanding of the topics covered in 300-415, before attempting the exam.

Exam 300-415 Reviews & 300-415 Best Practice

Pass4sureCert will give you confidence to pass Cisco 300-415 test. Our Exam Preparation Material provides you everything the candidates will need to get the 300-415 certification. Our Cisco 300-415 will provide you with exam questions with verified answers that reflect the actual exam. These questions and answers will help you to do preparation for taking a certification examination. High quality and Value for the 300-415 Exam: 100% guarantee to Pass Your Cisco 300-415 exam and get your certification.

Certification Path for Implementing Cisco SD-WAN Solutions (300-415 ENSDWI)

Implementing Cisco SD-WAN Solutions (300-415 ENSDWI) is a fundamental exam. Successful exam provides candidates with the

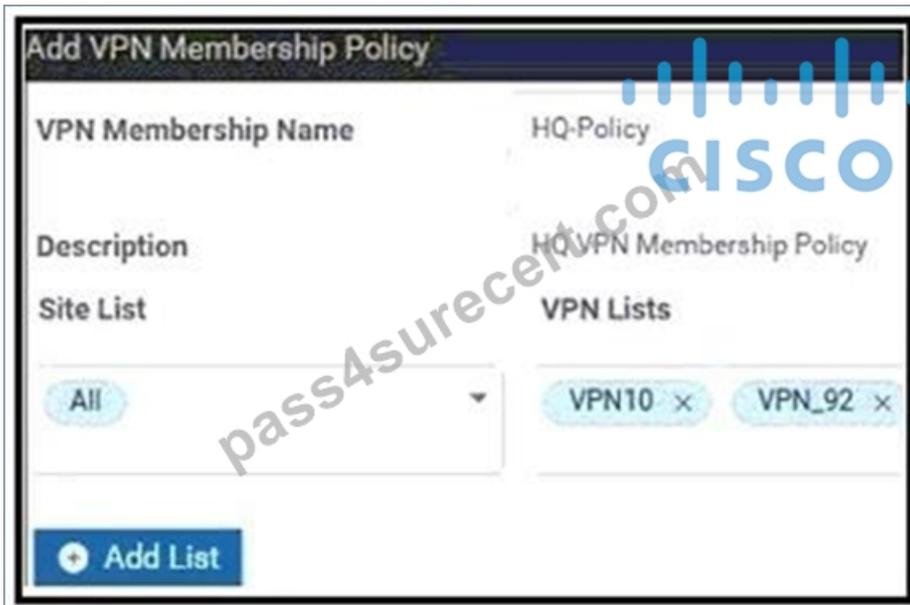

Cisco Implementing Cisco SD-WAN Solutions Sample Questions (Q186-Q191):

NEW QUESTION # 186

A customer is deploying the Cisco Catalyst SD-WAN solution for its 100 branches where branches reach the hub site using only the MPLS circuit. Which configuration should the networking team implement?

• A.

• B.

• C.

- D.

Answer: A

Explanation:

The first image shows a TLOC-based route policy that directs all VPN traffic to use the Hub_TLOC_MPLS, which is exactly what's needed when branches reach the hub only over MPLS. This policy ensures that traffic from branches is routed via the MPLS circuit toward the hub site.

NEW QUESTION # 187

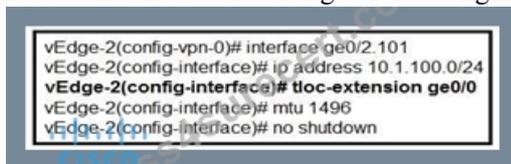

What does forward error correction addresses in Cisco SD-WAN?

- A. applications with occasional invalid data input and poor performance
- B. inefficient traffic forwarding caused by inbound shapers
- C. reduced application performance degradation related to service degradation
- D. traffic flows with increased delay over a particular transport

Answer: A

NEW QUESTION # 188

Refer to the exhibit. What binding is created using the tloc-extension command?

- A. between ge 0/2.101 of port-type service and ge 0/0 of port-type transport
- B. between ge 0/2.101 of port-type service and ge 0/0 of port-type service
- C. between ge 0/2.101 of port-type transport and ge 0/0 of port-type service
- D. between ge 0/2.101 of port-type transport and ge 0/0 of port-type transport

Answer: A

Explanation:

The tloc-extension command in Cisco SD-WAN (vEdge) configuration is used to extend the Transport Locator (TLOC) from one interface to another. This is typically done to bind interfaces that might be on different physical networks but should be treated as if they are on the same transport.

Looking at the configuration in the exhibit:

- The interface ge0/2.101 is being configured.
- The tloc-extension ge0/0 command binds the TLOC of ge0/0 to ge0/2.101.

For the TLOC extension, the binding is typically between a transport interface and another interface that is not a transport interface. This allows the interface ge0/2.101 to utilize the TLOC of ge0/0 to communicate across the SD-WAN fabric.

NEW QUESTION # 189

The application team is getting ready to deploy a new business-critical application to the network.

To protect the traffic, the network team must add another queue to the QoS map and then deploy the map to the fabric. Which configuration step must be completed prior to adding the queue to the QoS map and applying it?

- A. The relationship between the new QoS class and the hardware queue must be configured from the "lists" page of the Centralized Policy section of vManage. The QoS map is then applied to the WAN interface.
- **B. The relationship between the new QoS class and the hardware queue must be configured from the "lists" page of the Local Policy section of vManage. The QoS map is then applied to the WAN interface.**
- C. The relationship between the new QoS class and the hardware queue must be configured from the "lists" page of the Centralized Policy section of vManage. The QoS map is then applied to the service-side interface.
- D. The relationship between the new QoS class and the hardware queue must be configured from the "lists" page of the Local Policy section of vManage. The QoS map is then applied to the service-side interface.

Answer: B

Explanation:

QoS is created in Local policies and needs to be applied on the WAN interface.

NEW QUESTION # 190

A customer is receiving routes via OMP from vSmart controller for a specific VPN. The customer must provide access to the W2 loopback received via OMP to the OSPF neighbor on the service-side VPN, which configuration fulfils these requirements?

```
vpn 0
router
  ospf
    redistribute omp route-policy OSPF_Route_Policy
    area 0
    interface ge0/2
    exit
  lists
    prefix-list W2_Loopback
    ip-prefix 10.10.10.5/24
    !
    route-policy OSPF_Route_Policy
    sequence 1
    match
      address W2_Loopback
    !
    default action accept
    set
      metric 100
      metric-type type1

vpn 0
router
  ospf
    redistribute omp route-policy OSPF_Route_Policy
    area 0
    interface ge0/2
    exit
  lists
    prefix-list W2_Loopback
    ip-prefix 10.10.10.5/32
    !
    route-policy OSPF_Route_Policy
    sequence 1
    match
      address W2_Loopback
    !
    set
      metric 100
      metric-type type1
```

```

vpn 0
router
ospf
 redistribute ospf route-policy OSPF_Route_Policy
 area 0
 interface ge0/2
 exit
lists
 prefix-list W2_Loopback
 ip-prefix 10.10.10.5/32
!
 route-policy OSPF_Route_Policy
 sequence 1
 match
 address W2_Loopback
!
 action accept
 set
 metric 100
 metric-type type2

vpn 10
name **** Service VPN 10 ****
router
ospf
 redistribute ospf route-policy OSPF_Route_Policy
 area 0
 interface ge0/2
 exit
lists
 prefix-list W2_Loopback
 ip-prefix 10.10.10.5/32
!
 route-policy OSPF_Route_Policy
 sequence 1
 match
 address W2_Loopback
!
 action accept
 set
 metric 100
 metric-type type1

ospf
 redistribute ospf route-policy OSPF_Route_Policy
 area 0
 interface ge0/2
 exit
lists
 prefix-list W2_Loopback
 ip-prefix 10.10.10.5/32
!
 route-policy OSPF_Route_Policy
 sequence 1
 match
 address W2_Loopback
!
 action accept
 set
 metric 100
 metric-type type1

```

- A. Option C
- B. Option D
- C. Option E
- D. Option A
- E. Option B

Answer: B

Explanation:

Answer must start with VPN 10(service side) & should have metric-type 1 and not with VPN 0 (transport side)
