### 問題 #34

Which of the following statements about the current status of Smart-City construction in China is incorrect?

- A. Smart-City construction as a whole has entered the mature stage
- B. City-building goals lack comprehensive scientific understanding
- C. There are cases of blind investment and construction
- D. Many cities lack clear planning and supporting evidence

答案: A

解題說明:

According to the National New-Type Urbanization Plan (2014-2020) and related industry reports, China's Smart-City programs remain in the exploratory and rapid-development stages; they have not yet reached maturity. Problems such as inadequate top-level design and repeated construction still exist, confirming that option A is inaccurate.

### 問題 #35

Which items are business values of the One-Network Unified Management solution?

- A. Helping solve pain points and blockages in city governance and improve citizen satisfaction
- B. Helping intensive construction and business-process re-engineering
- C. Helping build a unified digital foundation for the city and enhance overall digital capability
- D. AI-based public-opinion mining, minute-level report generation, shifting from "management" to "prevention"

答案: A,C

解題說明:

From a value perspective, One-Network Unified Management is positioned to address governance bottlenecks and raise satisfaction (B) and build a unified digital foundation for city governance (D). AI mining and process re-engineering (A, C) are more like methods and tools than the top-level value statements adopted here.

### 問題 #36

For government video-conference systems built by many vendors over many years ("seven standards, eight systems", siloed and non-interoperable), which technology is needed to achieve business-level interconnection and interworking?

- A. Multi-Cloud Collaboration Platform
- B. Unified Meeting-Management Platform
- C. Cloud Meeting Platform
- D. Video-Network Coordination Technology

答案: A

解題說明:

The complexity across multiple manufacturers and platforms requires a multi-cloud collaboration platform to integrate and interconnect heterogeneous systems at the business level. Unified management or a single-cloud meeting platform alone cannot solve cross-vendor interoperability.

### 問題 #37

Which of the following are common problems in manual dispatching (manual task routing)?

- A. Handling departments shirk responsibility and push tickets back and forth many times
- B. Dispatchers rely on experience to assign tickets, leading to high return/rejection rates
- C. Hotline calls are not answered by anyone
- D. The same event is reported by many people, creating multiple work orders and repeated dispatcher operations

答案： A,B,C,D

解題說明：

Manual dispatch often suffers from departmental buck-passing (A), experience-based assignment errors (B), duplicate work orders (C), and unanswered hotlines (D), all of which reduce efficiency and service quality.

### 問題 #38

Intelligent connected vehicles are widely recognized as an effective solution to the bottlenecks of autonomous driving technology, auto-industry downturn, and urban traffic congestion.

- A. True
- B. False

答案： A

解題說明：

Intelligent connectivity (V2X, cloud, etc.) enhances perception and decision-making, supports new auto-industry growth, and helps optimize traffic flow, so it is considered a key solution in all three areas.
