NEW QUESTION # 28
Refer to the exhibit.

Routes

EFFECTIVE ROUTES   ROUTE MANAGEMENT

Route management view allows you to create and delete static routes and policy based routes.

CREATE ROUTE   C REFRESH

Filter   Enter property name or value

	Name ↑	Description	IP version	Destination IP range	Priority	Scope limits	Next hop	Network
	internal-to-internet		IPv4	0.0.0.0/0	1000	—	Forwarding rule of internal passthrough Network Load Balancer backend-lb-forwarding-rule	privatevpc

Which three conclusions can you draw from the Google Cloud custom route? (Choose three.)

- A. A target pool-based passthrough network load balancer was created.
- B. At least one instance group was created.
- C. The next hop must be updates manually in the custom route if the current next hop goes down.
- D. A health check was created.
- E. A group-based passthrough network load balancer was created.

Answer: B,C,D

Explanation:

The route's next hop is a forwarding rule for a backend service, which indicates a group-based passthrough load balancer.

Group-based load balancers require health checks to monitor instance health.

Backend services attach to instance groups to distribute traffic, so at least one instance group exists.

NEW QUESTION # 29

Refer to the exhibit.

An administrator is troubleshooting an issue when a high-availability (HA) failover occurs.

Which conclusion can you draw from the debug output?

- A. The HA cluster is accessible using HTTPS on 34.68.13.24 and 34.66.4.139.
- B. Both cluster members are located in the same zone.
- C. The HA cluster is deployed using the software-defined network (SDN) connector.
- D. The health check has successfully updated the internal custom route to forward all internal traffic to 172.16.1.3.

Answer: D

Explanation:

The debug output shows the internal route being updated and moved to the new next hop (172.16.1.3), indicating the health check and failover process successfully redirected internal traffic to the active HA node.

NEW QUESTION # 30

Refer to the exhibit.
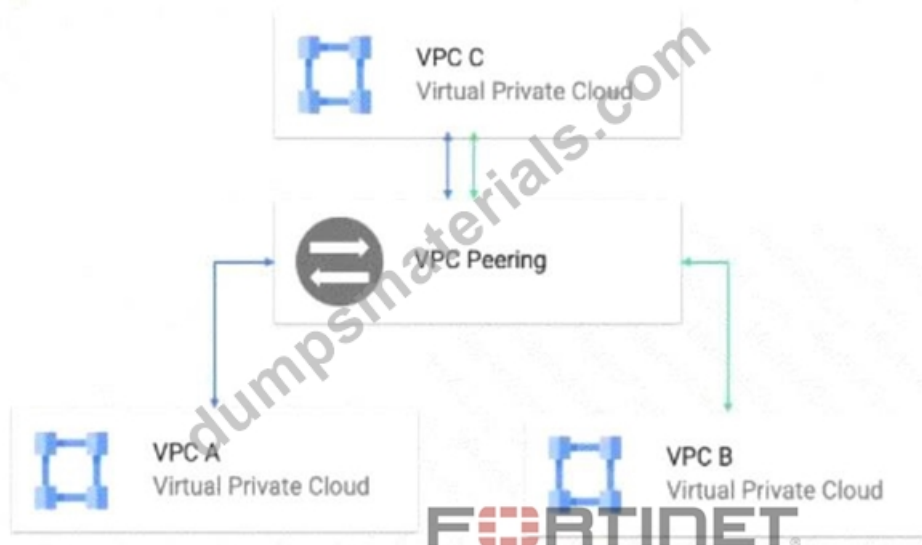

Which action must the administrator take to route traffic from VPC B to VPC A?

- A. The administrator must deploy a FortiGate VM with at least three network interfaces.
- B. The administrator must configure a custom route in VPC B and point the gateway to the VPC peering service.
- C. The administrator must create a new VPC peering connection between VPC A and VPC B.
- D. The administrative must configure a custom route in VPC B and point the gateway to VPC A.

Answer: A

Explanation:
Because VPC peering is non-transitive, traffic cannot route from VPC B to VPC A via VPC C. To enable routing between VPC A and VPC B through VPC C, a FortiGate VM with multiple network interfaces can act as a firewall/router to manage traffic between the three VPCs.
