Snowflake ARA-C01

SnowPro Advanced Architect Certification

3

질문 # 190

A user who has SELECT privilege on a view does not also need SELECT privilege on the tables that the view uses

A. TRUE

B. FALSE

정답A

질문 # 191

.....

IT인증시험이 다가오는데 어느 부분부터 공부해야 할지 망설이고 있다구요? 가장 간편하고 시간을 절약하며 한방에 자격증을 취득할 수 있는 최고의 방법을 추천해드립니다. 바로 우리KoreaDumps IT인증덤프게공사입니다. KoreaDumps는 고품질 고적중율을 취지로 하여 여러분들인 한방에 시험에서 패스하도록 최선을 다하고 있습니다. Snowflake인증ARA-C01시험준비중이신 분들은KoreaDumps 에서 출시한Snowflake인증ARA-C01 덤프를 선택하세요.

ARA-C01시험합격덤프: https://www.koreadumps.com/ARA-C01_exam-braindumps.html

Snowflake ARA-C01인증자료 구매전 구매사이트에서 무료샘플을 다운받아 PDF버전 덤프내용을 우선 체험해보실 수 있습니다. ARA-C01시험은 저희 사이트에서 출시한 SnowPro Advanced Architect Certification덤프로 도전하시면 됩니다. 저희 회사에서 출시한ARA-C01 문제집을 이용하시면 시험에서 성공할 수 있습니다. SnowPro Advanced Architect Certification덤프 무료 업데이트 서비스를 제공해드림으로 고객님께서 구매하신 ARA-C01덤프 유효기간을 최대한 연장해드립니다. 최근 유행하는Snowflake인증 ARA-C01 IT인증시험에 도전해볼 생각을 없으신지요. Snowflake ARA-C01시험합격덤프 ARA-C01시험합격덤프 시험덤프자료는 가격이 착한데 비해 너무나 훌륭한 품질과 높은 적중율을 지니고 있습니다.

짧은 정적, 넓은 호응치는 걸작한 목소리에 모델이라는 지도 모르게 읊조려들었다. Snowflake ARA-C01인증자료 구매전 구매사이트에서 무료샘플을 다운받아 PDF버전 덤프내용을 우선 체험해보실 수 있습니다. ARA-C01시험은 저희 사이트에서 출시한 SnowPro Advanced Architect Certification덤프로 도전하시면 됩니다.

최신버전 ARA-C01 Vce 완벽한 덤프 최신버전

To prepare for ARA-C01 exam, you do not need read a pile of reference books or take more time to join in related training courses, what you need to do is to make use of our TrainingDumps exam software, and you can pass the exam with ease. Our exam dumps can not only help you reduce your pressure from ARA-C01 Exam Preparation, but also eliminate your worry about money waste. We guarantee to give you a full refund of the cost you purchased our dump if you fail ARA-C01 exam for the first time after you purchased and used our exam dumps. So please be rest assured the purchase of our dumps.

Snowflake ARA-C01 Exam Syllabus Topics:

Section	Objectives
---------	------------

	- Data ingestion and transformation • 1. Batch and streaming ingestion • 2. Snowpipe and continuous data loading
Data Pipelines and Data Engineering	- Data orchestration • 1. Tasks and Streams usage • 2. Pipeline design patterns - Secure data sharing
Data Sharing and Collaboration	• 1. Cross-account data sharing • 2. Data marketplace concepts - Data modeling and schema design • 1. Semi-structured data modeling • 2. Star and snowflake schema concepts
Data Architecture and Design	- Design scalable Snowflake architectures • 1. Multi-cluster virtual warehouse design • 2. Account and environment strategy - Cost optimization • 1. Storage and compute efficiency • 2. Resource monitoring and cost control
Performance and Optimization	- Query performance tuning • 1. Query profiling and optimization techniques • 2. Warehouse sizing and scaling - Data governance • 1. Data classification and masking policies • 2. Audit and compliance features
Security, Governance, and Compliance	- Access control and security model • 1. Role-based access control (RBAC) • 2. Network security and authentication

Best ARA-C01 Vce - 100% Pass 2026 ARA-C01: SnowPro Advanced Architect Certification First-grade Detail Explanation

What we attach importance to in the transaction of latest ARA-C01 quiz prep is for your consideration about high quality and efficient products and time-saving service. We treasure time as all customers do. Therefore, fast delivery is another highlight of our latest ARA-C01 quiz prep. We are making efforts to save your time and help you obtain our product as quickly as possible. We will send our ARA-C01 Exam Guide within 10 minutes after your payment. You can check your mailbox ten minutes after payment to see if our ARA-C01 exam guide are in.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which of the below privileges are required for search optimization?

- A. OWNERSHIP privilege on the table
- B. ADD SEARCH OPTIMIZATION privilege on the schema that contains the table
- C. ADD SEARCH OPTIMIZATION privilege on the table.

Answer: A,B

NEW QUESTION # 39

A company is designing high availability and disaster recovery plans and needs to maximize redundancy and minimize recovery time objectives for their critical application processes. Cost is not a concern as long as the solution is the best available. The plan so far consists of the following steps:

1. Deployment of Snowflake accounts on two different cloud providers.
2. Selection of cloud provider regions that are geographically far apart.
3. The Snowflake deployment will replicate the databases and account data between both cloud provider accounts.
4. Implementation of Snowflake client redirect.

What is the MOST cost-effective way to provide the HIGHEST uptime and LEAST application disruption if there is a service event?

- A. Connect the applications using the <organization_name>-<connection_name> URL. Use the Virtual Private Snowflake (VPS) edition.
- B. Connect the applications using the <organization_name>-<connection_name> URL. Use the Business Critical Snowflake edition.
- C. Connect the applications using the <organization_name>-<accountLocator> URL. Use the Enterprise Snowflake edition.
- D. Connect the applications using the <organization_name>-<accountLocator> URL. Use the Business Critical Snowflake edition.

Answer: D

Explanation:

To provide the highest uptime and least application disruption in case of a service event, the best option is to use the Business Critical Snowflake edition and connect the applications using the

<organization_name>-<accountLocator> URL. The Business Critical Snowflake edition offers the highest level of security, performance, and availability for Snowflake accounts. It includes features such as customer-managed encryption keys, HIPAA compliance, and 4-hour RPO and RTO SLAs. It also supports account replication and failover across regions and cloud platforms, which enables business continuity and disaster recovery. By using the <organization_name>-<accountLocator> URL, the applications can leverage the Snowflake Client Redirect feature, which automatically redirects the client connections to the secondary account in case of a failover. This way, the applications can seamlessly switch to the backup account without any manual intervention or configuration changes. The other options are less cost-effective or less reliable because they either use a lower edition of Snowflake, which does not support account replication and failover, or they use the <organization_name>-<connection_name> URL, which does not support client redirect and requires manual updates to the connection string in case of a failover. NEW QUESTION # 40

Why might a Snowflake Architect use a star schema model rather than a 3NF model when designing a data architecture to run in Snowflake? (Select TWO).

- A. The Architect is designing a landing zone to receive raw data into Snowflake.
- B. Snowflake cannot handle the joins implied in a 3NF data model.
- C. The BI tool needs a data model that allows users to summarize facts across different dimensions, or to drill down from the summaries.
- D. The Architect wants to remove data duplication from the data stored in Snowflake.
- E. The Architect wants to present a simple flattened single view of the data to a particular group of end users.

Answer: C,D

NEW QUESTION # 41

Running EXPLAIN on a query does not require a running warehouse

- A. TRUE
- B. FALSE

Answer: A

NEW QUESTION # 42

What Snowflake features should be leveraged when modeling using Data Vault?

- A. Data needs to be pre-partitioned to obtain a superior data access performance
- B. Snowflake's ability to hash keys so that hash key joins can run faster than integer joins
- C. Snowflake's support of multi-table inserts into the data model's Data Vault tables
- D. Scaling up the virtual warehouses will support parallel processing of new source loads

Answer: C

Explanation:

These two features are relevant for modeling using Data Vault on Snowflake. Data Vault is a data modeling approach that organizes data into hubs, links, and satellites. Data Vault is designed to enable high scalability, flexibility, and performance for data integration and analytics. Snowflake is a cloud data platform that supports various data modeling techniques, including Data Vault. Snowflake provides some features that can enhance the Data Vault modeling, such as:

Snowflake's support of multi-table inserts into the data model's Data Vault tables. Multi-table inserts (MTI) are a feature that allows inserting data from a single query into multiple tables in a single DML statement. MTI can improve the performance and efficiency of loading data into Data Vault tables, especially for real-time or near-real-time data integration. MTI can also reduce the complexity and maintenance of the loading code, as well as the data duplication and latency¹².

Scaling up the virtual warehouses will support parallel processing of new source loads. Virtual warehouses are a feature that allows provisioning compute resources on demand for data processing. Virtual warehouses can be scaled up or down by changing the size of the warehouse, which determines the number of servers in the warehouse. Scaling up the virtual warehouses can improve the performance and concurrency of processing new source loads into Data Vault tables, especially for large or complex data sets. Scaling up the virtual warehouses can also leverage the parallelism and distribution of Snowflake's architecture, which can optimize the data loading and querying³⁴.
