## Cisco Designing Cisco Security Infrastructure Sample Questions (Q56-Q61):

### NEW QUESTION # 56

Which two approaches support secure communication in containerized microservices architectures? (Choose two.)

- A. Service Mesh with policy enforcement
- B. Mutual TLS between services
- C. Static NAT entries
- D. Shared service account credentials

**Answer: A,B**

Explanation:

Mutual TLS (mTLS) provides encrypted communication and mutual authentication between services. A service mesh enforces centralized security policies and automates secure communication across microservices.

#### NEW QUESTION # 57

How does a SOC leverage flow collectors?

- A. It provides data for analysis in threat detection and response system.
- B. It performs load balancing capabilities across systems to optimize performance.
- C. It performs data backup and recovery.
- D. It provides real time content filtering.

**Answer: A**

Explanation:

A flow collector gathers metadata about network traffic (such as NetFlow or IPFIX), which SOC analysts use to analyze communication patterns. This data is critical for threat detection and response, helping identify anomalies, lateral movement, or potential attacks.

#### NEW QUESTION # 58

An oil and gas company recently faced a security breach when an employee's notepad, which contained critical login credentials, was stolen. The incident led to unauthorized access to a user account, which posed a significant risk to sensitive company data and operations. The company wants to adopt a security measure that enhances user account protection. Which action must be taken to prevent breaches like this from happening in the future?

- A. Update the RADIUS server.
- B. Configure a password expiration policy.
- C. Implement single sign-on.
- D. Implement MFA

**Answer: D**

Explanation:

Multi-Factor Authentication (MFA) strengthens user account security by requiring additional verification factors beyond passwords, such as tokens or biometrics. Even if credentials are stolen, MFA prevents unauthorized access, directly addressing the breach scenario.

#### NEW QUESTION # 59

A product manager is focused on maintaining the security integrity of a microservice-based application as new features are developed and integrated. To ensure that known software vulnerabilities are not introduced into the product, it is crucial to implement a robust application security technique. The technique must be applied during the build phase of the software development lifecycle, which allows the team to proactively identify and address vulnerability risks before deployment. Which application security technique must be applied to accomplish the goal?

- A. infrastructure as code scanning
- B. secret detection
- C. container scanning
- D. Open API specification analysis

**Answer: C**

Explanation:

Container scanning during the build phase ensures that no known software vulnerabilities are introduced into the application. It scans container images for outdated libraries, misconfigurations, and security flaws before deployment, allowing proactive remediation. This directly supports maintaining the security integrity of a microservice-based application.

#### NEW QUESTION # 60

A technology company recently onboarded a new customer in the medical space. The customer needs a solution to provide data integrity across remote sites. Which solution must be used to meet this requirement?

- A. data masking
- **B. hashing**
- C. authentication
- D. preshared key

**Answer: B**

Explanation:

Hashing ensures data integrity by generating a fixed-length value (hash) for data. When data is transmitted between remote sites, the hash can be recalculated and compared to verify that the data has not been altered in transit.

#### NEW QUESTION # 61
