## CHFAM training materials: Certified Healthcare Facility Manager (CHFAM) certification exam & CHFAM guide torrent & Medical Professional CHFAM quiz

We all known that most candidates will worry about the quality of our product, In order to guarantee quality of our study materials,

all workers of our company are working together, just for a common goal, to produce a high-quality product; it is our CHFAM exam questions. If you purchase our CHFAM Guide Torrent, we can guarantee that we will provide you with quality products, reasonable price and professional after sales service. I think our CHFAM test torrent will be a better choice for you than other study materials.

## Medical Professional Certified Healthcare Facility Manager (CHFAM) certification exam Sample Questions (Q45-Q50):

### NEW QUESTION # 45

A code compliant, medical gas storage room contains a large number of different compressed gases. The gases are in 25 cu. ft. cylinders and in 250 cu. ft. cylinders. All cylinders are full. The Safety Officer completed a cylinder storage audit and discovered the room was over the maximum amount of compressed gas cylinders allowed by 140 cu. ft. Which of the following is the minimum number of 25 cu. ft. cylinders that must be removed to make the storage room code compliant?

- A. 0
- **B. 1**
- C. 2
- D. 3

**Answer: B**

Explanation:

Overage = 140 cu. ft.

Each small cylinder = 25 cu. ft.

$140 \div 25 = 5.6$  # minimum 6 needed if rounding up. However, since the question asks for the minimum number to remove to get below the limit, removing 5 cylinders = 125 cu. ft. would still leave 15 cu. ft. over the limit. Therefore, 6 cylinders must be removed. Correct answer = C (6), not B.

References: NFPA 99 (Health Care Facilities Code), Chapter on Medical Gas Systems.

### NEW QUESTION # 46

According to NFPA 80, the maximum undercut allowed for rated fire doors is how many inches?

- A. 5/8
- B. 0
- C. 1/2
- **D. 3/4**

**Answer: D**

Explanation:

NFPA 80 (Standard for Fire Doors and Other Opening Protectives) sets requirements for fire door construction and installation. It specifies that the maximum undercut clearance is 3/4 inch unless otherwise tested and listed. Greater clearances compromise the integrity of the fire barrier.

References: NFPA 80, Section 4.8.4 (2010 edition and later); CHFAM Candidate Handbook - Compliance domain.

### NEW QUESTION # 47

Which of the following types of injuries is most likely to occur during an MRI scanning process?

- A. radiation overexposure
- B. visual impairment
- **C. missile projection**
- D. permanent hearing loss

**Answer: C**

Explanation:

MRI does not use ionizing radiation, so radiation-related injuries are not possible. The greatest risk is the "missile effect" where ferromagnetic objects (scissors, oxygen tanks, tools) are violently pulled into the MRI bore by its powerful magnetic field.

D). Missile projection (Correct): Most likely injury hazard.

- A). Visual impairment: Not a typical MRI injury.
- B). Radiation overexposure: MRI uses magnetic fields, not radiation.
- C). Hearing loss: Possible from loud noise but mitigated with ear protection; less common than missile hazard.

CHFM Candidate Handbook - Compliance domain.

#### **NEW QUESTION # 48**

According to OSHA, which of the following is required as part of a lockout/tagout program?

- A. insulated tools
- B. written activity logs
- C. flame-resistant clothing
- **D. staff training program**

**Answer: D**

Explanation:

OSHA's Control of Hazardous Energy (Lockout/Tagout) Standard (29 CFR 1910.147) requires that employers implement a staff training program to ensure all affected employees understand energy control procedures. Insulated tools, logs, or clothing may be used in some contexts, but training is mandatory under OSHA.

References: OSHA 29 CFR 1910.147(c)(7) - Employee Training and Communication.

#### **NEW QUESTION # 49**

Regulations governing medical gas and vacuum systems are covered under which of the following NFPA codes?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

NFPA 99, Health Care Facilities Code, sets the requirements for medical gas and vacuum systems, including design, installation, testing, and maintenance (in recent editions, see the chapter dedicated to Gas and Vacuum Systems). It also addresses source equipment, piping, alarms, and verification procedures used in patient care spaces.
