### 最新的 Citrix Virtual Apps 1Y0-204 免費考試真題 (Q97-Q102):

#### 問題 #97

Scenario: A Citrix Administrator is required to maximize the usage of the Citrix Virtual Apps and Desktops Site by enabling users to access the Site from external devices and reducing the cost and the effort required to maintain the infrastructure. The desktops for the users are provisioned using Citrix Provisioning.

Which set of resources will enable the administrator to achieve the objective?

- A. Citrix Virtual Apps and Desktops service, Citrix Gateway service, public cloud
- B. Citrix Virtual Apps and Desktops service, Citrix Gateway, on-premises resources
- **C. Citrix Virtual Apps and Desktops service, Citrix Gateway service, on-premises resources**
- D. Citrix Virtual Apps and Desktops service, Citrix Gateway, public cloud

答案：C

解題說明：

#### Explanation

According to the Citrix Virtual Apps and Desktops service documentation<sup>1</sup>, the Citrix Virtual Apps and Desktops service allows administrators to manage on-premises resources from the cloud, while providing users with secure access to those resources from any device. The Citrix Gateway service<sup>2</sup> provides secure remote access to the on-premises resources through the Citrix Cloud Connector. The Citrix Provisioning service<sup>3</sup> enables administrators to stream a single desktop image to multiple virtual machines, reducing storage and maintenance costs.

#### 問題 #98

Scenario: A Citrix Administrator plans to implement HDX Insight in an environment to troubleshoot intermittent issues. The administrator needs to know which components make up HDX Insight to ensure that all of the necessary prerequisites are configured.

Which three components will the administrator need to review? (Choose three.)

- A. Citrix Studio
- B. Citrix Director
- C. Citrix Application Delivery Management
- D. Web Insight
- E. Citrix Gateway

答案: B,C,E

#### 解題說明:

#### Explanation

According to the HDX Insight documentation, HDX Insight is the integration of NetScaler Network Inspector and Performance Manager with Director. It captures data about ICA traffic and provides a dashboard view of real time and historical details. To monitor NetScaler appliances deployed in this mode, first add the NetScaler appliance to the NetScaler Application Delivery Management (ADM) inventory, enable AppFlow, and then view the reports on the dashboard. External users who access Citrix Virtual App and Desktop applications must authenticate themselves on the NetScaler Gateway. Therefore, the three components that the administrator will need to review are:

\* Citrix Application Delivery Management: This is the platform that collects and analyzes the AppFlow records generated by the NetScaler appliance.

\* Citrix Gateway: This is the component that provides secure access to the Citrix Virtual App and Desktop applications and generates the AppFlow records for HDX Insight.

\* Citrix Director: This is the web-based tool that displays the HDX Insight reports and allows the administrator to troubleshoot performance issues.

#### 問題 #99

Scenario: A Citrix Administrator has configured an Authentication, Authorization, and Auditing (AAA) action policy to allow users access through the Citrix ADC. The Administrator bound the policy to a specific vServer.

Which policy expression will allow all users access through the vServer?

- A. ns\_true
- B. ns\_allow
- C. ns\_disallow
- D. ns\_false

答案: B

#### 問題 #100

What could a Citrix Administrator do to host a Cloud Connector on two machines within a resource location using a cloned machine template?

- A. Ensure that each Cloud Connector provisioned is in the same resource location as the cloned machine template.
- B. Provision each machine from a cloned machine template and install the Cloud Connector software on them.
- C. Add each Cloud Connector provisioned from a cloned machine template to a new resource location.
- D. Install the Cloud Connector software on a master machine template before it has been cloned.

答案： B

解題說明：

Installing the Cloud Connector on a machine template (before cloning) is not supported. If you clone a machine with the Cloud Connector installed, the Cloud Connector services won't run and the machine can't connect to Citrix Cloud1. Therefore, the administrator should provision each machine from a cloned machine template and install the Cloud Connector software on them. This way, the Cloud Connectors can communicate with Citrix Cloud and register with the same resource location2.

1: Cloud Connector Installation | Citrix Cloud 2: Install Cloud Connectors from the command line | Citrix Cloud Government

### 問題 #101

Scenario: A Citrix Administrator has given permissions to team members to access their own admin partition, so they can add resources for different departments and manage them without making changes to the default Citrix ADC partition and configuration. One team member was trying to use the command-line interface to troubleshoot an authentication issue and cloud NOT use aaad.debug. However, the team member has full permissions on the admin partition. What can be the cause of this issue?

- A. The team member is NOT using the CLI correctly.
- B. The team member needs to troubleshoot the issue from the GUI.
- C. The team member does NOT have permission to use the CLI.
- D. The team member does NOT have Shell access by design.

答案： D

解題說明：

According to the Citrix Virtual Apps and Desktops 7 Deployment and Administration course, team members who have access to their own admin partitions do NOT have Shell access by design. Shell access is only available for the default partition. Therefore, the team member cannot use aaad.debug or any other Shell commands from the CLI1
