

1z1-076 Exam Papers, 1z1-076 Valuable Feedback

What's more, part of that Exam4Docs 1z1-076 dumps now are free: <https://drive.google.com/open?id=1k1DOFokmCbqWtrMIUoAe8GVlgSStdWk>

In order to help all people to pass the 1z1-076 exam and get the related certification in a short time, we designed the three different versions of the 1z1-076 study materials. We can promise that the products can try to simulate the real examination for all people to learn and test at same time and it provide a good environment for learn shortcoming in study course. If you buy and use the 1z1-076 Study Materials from our company, you can practice 1z1-076 learning tests as in the real exam and pass the 1z1-076 exam easily.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 3	<ul style="list-style-type: none">Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 4	<ul style="list-style-type: none">Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 5	<ul style="list-style-type: none">Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 6	<ul style="list-style-type: none">Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 7	<ul style="list-style-type: none">Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 8	<ul style="list-style-type: none">Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 10	<ul style="list-style-type: none">Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.

Topic 11	<ul style="list-style-type: none"> • Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 12	<ul style="list-style-type: none"> • Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 13	<ul style="list-style-type: none"> • Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.

1z1-076 Exam Papers 100% Pass | High-quality 1z1-076 Valuable Feedback: Oracle Database 19c: Data Guard Administration

There is considerate and concerted cooperation for your purchasing experience on our 1z1-076 exam braindumps accompanied with patient staff with amity. You can find 1z1-076 simulating questions on our official website, and we will deal with everything once your place your order. You will find that you can receive our 1z1-076 training guide in just a few minutes, almost 5 to 10 minutes. And if you have any questions, you can contact us at any time since we offer 24/7 online service for you.

Oracle Database 19c: Data Guard Administration Sample Questions (Q80-Q85):

NEW QUESTION # 80

Which THREE statements are true about snapshot standby databases?

- A. FLASHBACK DATABASE must be manually enabled on a physical standby database before converting it into a snapshot standby database.
- B. A snapshot standby database may be opened read-only.
- C. A snapshot standby database can have Real-Time apply enabled.
- D. FLASHBACK DATABASE is enabled automatically on a snapshot standby database after converting it from a physical standby database if not already enabled.
- E. A snapshot standby database may be opened read-write.
- F. FLASHBACK DATABASE is enabled automatically on a physical standby database as part of the conversion into a snapshot standby database, if not already enabled.

Answer: D,E,F

Explanation:

Snapshot standby databases are a feature of Oracle Data Guard that allows a physical standby database to be temporarily converted into a read-write database for testing or other purposes. The true statements about snapshot standby databases are: FLASHBACK DATABASE is enabled automatically on a snapshot standby database after converting it from a physical standby database if not already enabled (B): When a physical standby is converted to a snapshot standby, FLASHBACK DATABASE is automatically enabled to allow the database to be easily reverted back to its original state.

FLASHBACK DATABASE is enabled automatically on a physical standby database as part of the conversion into a snapshot standby database, if not already enabled (C): As part of the conversion process, FLASHBACK DATABASE is turned on to ensure that changes made while the database is in snapshot standby mode can be undone.

A snapshot standby database may be opened read-write (E): Once a physical standby is converted to a snapshot standby, it can be opened for read-write operations, allowing for testing and other tasks that require a writable database.

NEW QUESTION # 81

Attempting to start the observer raises an error:

```
DGMGRL> start observer;
```

DGM-16954: Unable to open and lock the Observer configuration file
Failed.

Identify two possible ways to start the observer successfully.

- A. Set the ObserverOverride property to TRUE before starting the observer.
- **B. Start the observer using a different observer configuration file.**
- **C. Start the observer in a different working directory.**
- D. Create a broker configuration and enable Fast-Start Failover before starting the observer.
- E. Enable Fast-Start Failover before starting the observer.

Answer: B,C

NEW QUESTION # 82

Examine the Data Guard configuration:

```
DGMGRL> show configuration;
```

Configuration - Animals

Protection Mode: MaxAvailability

Databases:

dogs - Primary database

cats - Snapshot standby database

sheep - Snapshot standby database

Fast-Start Failover: DISABLED

Configuration Status:

ORA-01034: ORACLE not available

ORA-16625: cannot reach database "dogs"

DGM-17017: unable to determine configuration status

ou wish to perform a failover to sheep. Which command, or sequence of commands, should you issue to the broker before executing failover to sheep; using the broker?

- A. DGMGRL> convert database cats to physical standby;
- B. DGMGRL> convert database cats to physical standby;
- **C. DGMGRL> convert database sheep to physical standby;**
- D. None, because you can directly failover to a Snapshot Standby Database.
- E. DGMGRL> convert database sheep to physical standby;
DGMGRL> edit configuration set protection mode as maxperformance;
DGMGRL> convert database sheep to physical standby;

Answer: C

NEW QUESTION # 83

Which TWO observations are true about the Far Sync instance?

- A. Can be created using the RMAN DUPLICATE command
- B. Can only be created using a series of SQL commands
- **C. Applies redo received**
- **D. Receives redo synchronously from the primary database**
- E. Includes a standby control file, password file, data files, standby redo logs, and archive logs

Answer: C,D

Explanation:

A Far Sync instance is a special kind of Oracle Data Guard configuration that allows synchronous redo transport from a primary database to a remote standby database with minimum impact on the primary database's performance. The Far Sync instance receives redo data synchronously from the primary database (A), then ships it asynchronously to the remote standby database, thus extending zero data loss protection over longer distances and higher network latency environments than would be practical with a synchronous standby alone. The Far Sync instance does not apply the redo data; it just receives and ships it (E). A Far Sync

instance does not have data files, and it cannot apply redo to stay synchronized with the primary database.

Reference:

Oracle Database High Availability Overview and Oracle Data Guard Concepts and Administration documentation detail the role and configuration of Far Sync instances, including how they contribute to achieving zero data loss disaster recovery over long distances.

NEW QUESTION # 84

In Oracle Database 19c, you can set the value of database initialization parameters in a database using the EDIT DATABASE...

SET PARAMETER Command:

```
DGMGRL> EDIT DATABASE 'boston' SET PARAMETER log_archive_trace - 1;
```

Which THREE statements are TRUE about the command?

- A. The edit database parameter command can only be used to modify the value of a dynamic parameter in a database.
- B. The value set using this command is directly applied to the boston database.
- C. The value set using this command is directly stored in the broker configuration file.
- D. The EDIT DATABASE PARAMETER command can be used to set the value of a static parameter in a database.
- E. The database must be available when the above command is run.

Answer: A,B,E

Explanation:

The EDIT DATABASE...SET PARAMETER command in Data Guard Management (DGMGRL) is used to modify the value of initialization parameters for a database within a Data Guard configuration. This command can be used to modify both static and dynamic parameters, but if a static parameter is changed, the new value will take effect only after the database is restarted. The database must be up and running for the command to execute, and the values set using the command are directly applied to the specified database (in this case, 'boston').

NEW QUESTION # 85

.....

A generally accepted view on society is only the professionals engaged in professionally work, and so on, only professional in accordance with professional standards of study materials, as our Oracle Database 19c: Data Guard Administration study questions, to bring more professional quality service for the user. Our study materials can give the user confidence and strongly rely on feeling, lets the user in the reference appendix not alone on the road, because we are to accompany the examinee on 1z1-076 Exam, candidates need to not only learning content of teaching, but also share his arduous difficult helper, so believe us, we are so professional company.
