

# Quiz 2026 High Pass-Rate Microsoft Valid AZ-204 Exam Cram

BONUS!!! Download part of ActualPDF AZ-204 dumps for free: [https://drive.google.com/open?id=18mWMBTHBTzVmTG\\_EnhI5\\_mlDhLLQ9Elc](https://drive.google.com/open?id=18mWMBTHBTzVmTG_EnhI5_mlDhLLQ9Elc)

Preparing for the exam may be not an easy thing for some candidates, if you choose us, we will do the things for you, what you need to do is practicing. We offer you free demo for AZ-204 training materials, you can have a try before buying. And you will receive the downloading link and password within ten minutes after purchasing the AZ-204 Exam Dumps. In addition, we have after-service stuff to resolve the confusions you have. If you fail to pass the exam, we are money back guaranteed, or if you have other exam to attend, we can also replace other 2 valid exam dumps for you.

The Microsoft AZ-204 exam is intended for developers who have experience in developing cloud-based applications using programming languages such as C#, Java, Node.js, or Python. The candidates should have knowledge of developing solutions using Azure services such as Azure App Service, Azure Functions, Azure Storage, Azure Event Grid, and Azure Service Bus. They should also have experience in using Azure DevOps for continuous integration and deployment.

Microsoft Azure platform is a cloud computing service that provides a range of services and tools to help businesses build, deploy, and manage applications and services. With the increasing demand for cloud-based solutions, the need for professionals who can develop and implement solutions on the Azure platform has also increased. The AZ-204 Exam is a great way for developers to demonstrate their expertise in this area and to gain recognition for their skills.

## Free PDF Quiz 2026 Valid Microsoft AZ-204: Valid Developing Solutions for Microsoft Azure Exam Cram

Our experts have great familiarity with AZ-204 real exam in this area. With passing rate up to 98 to 100 percent, we promise the profession of them and infallibility of our AZ-204 practice materials. So you won't be pestered with the difficulties of the exam any more. What is more, our AZ-204 Exam Dumps can realize your potentiality greatly. Unlike some irresponsible companies who churn out some AZ-204 study guide, we are looking forward to cooperate fervently.

# Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q82-Q87):

## NEW QUESTION # 82

You are validating the configuration of an Azure Search indexer.

The service has been configured with an indexer that uses the Import Data option. The index is configured using options as shown in the Index Configuration exhibit. (Click the Index Configuration tab.)

FIELD NAME	TYPE	REINDEXABLE	FILTERABLE	Sortable	FACTABLE	SEARCHABLE
PartitionKey	Edm.String	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
RowKey	Edm.String	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
InStockCount	Edm.Int32	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ItemDescription	Edm.DateTim...	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ItemName	Edm.String	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
LocationRow	Edm.Int32	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
LocationShelf	Edm.Int32	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
SKU	Edm.String	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

You use an Azure table as the data source for the import operation. The table contains three records with item inventory data that matches the fields in the Storage data exhibit. These records were imported when the index was created. (Click the Storage Data tab.) When users search with no filter, all three records are displayed.

PartitionKey	RowKey	InStockCount	ItemDescription	ItemName	LocationRow	LocationShelf	SKU
Hardware	2	2018-08-20T15:48:58.403Z	A bag of nuts	Nuts	2	4	675584
Hardware	1	2018-08-20T15:48:41.493Z	A bag of nuts	Nuts	2	1	684368

```

Query string:
search:bag

Results:
1 {
  "@odata.context": "https://api.search.windows.net/indexes(azuretable-index)/searchables/searchables",
  "value": []
}
    
```

When users search for items by description, Search explorer returns no records. The Search Explorer exhibit shows the query and results for a test. In the test, a user is trying to search for all items in the table that have a description that contains the word bag. (Click the Search Explorer tab.) You need to resolve the issue.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

	Yes	No
You can resolve the issue by recreating the search index with the same settings for all fields except ItemDescription. Select the SEARCHABLE option for this field	<input type="radio"/>	<input type="radio"/>
You can resolve the issue by selecting the index, editing the ItemDescription field, and selecting the SEARCHABLE option for the field	<input type="radio"/>	<input type="radio"/>
You can resolve the issue by running the indexer.	<input type="radio"/>	<input type="radio"/>
You can resolve the issue by changing the query string in Search explorer to bag of to return the correct results	<input type="radio"/>	<input type="radio"/>

**Answer:**

Explanation:

	Yes	No
You can resolve the issue by recreating the search index with the same settings for all fields except ItemDescription. Select the SEARCHABLE option for this field	<input checked="" type="radio"/>	<input type="radio"/>
You can resolve the issue by selecting the index, editing the ItemDescription field, and selecting the SEARCHABLE option for the field	<input type="radio"/>	<input checked="" type="radio"/>
You can resolve the issue by running the indexer.	<input checked="" type="radio"/>	<input type="radio"/>
You can resolve the issue by changing the query string in Search explorer to bag of to return the correct results	<input type="radio"/>	<input checked="" type="radio"/>

Explanation

	Yes	No
You can resolve the issue by recreating the search index with the same settings for all fields except ItemDescription. Select the SEARCHABLE option for this field	<input type="radio"/>	<input type="radio"/>
You can resolve the issue by selecting the index, editing the ItemDescription field, and selecting the SEARCHABLE option for the field.	<input type="radio"/>	<input type="radio"/>
You can resolve the issue by running the indexer.	<input type="radio"/>	<input type="radio"/>
You can resolve the issue by changing the query string in Search explorer to bag of to return the correct results	<input type="radio"/>	<input type="radio"/>

Box 1: Yes

The ItemDescription field is not searchable.

Box 2: No

The ItemDescription field is not searchable, but we would need to recreate the index.

Box 3: Yes

An indexer in Azure Search is a crawler that extracts searchable data and metadata from an external Azure data source and populates an index based on field-to-field mappings between the index and your data source.

This approach is sometimes referred to as a 'pull model' because the service pulls data in without you having to write any code that adds data to an index.

Box 4: No

### NEW QUESTION # 83

You have an App Service plan named aspl based on the Free pricing tier.

You plan to use aspl to implement an Azure Function app with a queue trigger. Your solution must minimize cost. You need to identify the configuration options that will meet the requirements. Which value should you configure? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

**Answer Area**

Configuration option	Value
Azure App Service feature	Managed identity Always On Managed identity Continuous deployment
Azure App Service pricing tier	Basic Basic Shared Standard

**Answer:**

Explanation:

**Answer Area**

Configuration option	Value
Azure App Service feature	Managed identity Always On Managed identity Continuous deployment
Azure App Service pricing tier	Basic Basic Shared Standard

Explanation:

**Answer Area**

Configuration option	Value
Azure App Service feature	Managed identity
Azure App Service pricing tier	Basic

**NEW QUESTION # 84**

You need to provide internal staff access to the production site after a validation. How should you complete the code segment? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

**Answer Area**

```
<a href="https://www.munsonspicklesandpreservesfarm.com/?
">Go back to production app</a>
```

Configuration option	Value
x-ms-routing-name	self self staging production
x-ms-app	
x-ms-user	
x-ms-routing-name	
x-ms-client-request-id	

**Answer:**

Explanation:

Explanation:

Topic 9, Fourth Coffee

Background

Current Environment

Fourth Coffee is a global coffeehouse chain and coffee company recognized as one of the world's most influential coffee brands. The company is renowned for its specialty coffee beverages, including a wide range of espresso-based drinks, teas, and other beverages. Fourth Coffee operates thousands of stores worldwide.

The company is developing cloud-native applications hosted in Azure.

Corporate website

The company hosts a public website located at <http://www.fourthcoffee.com/>.

The website is used to place orders as well as view and update inventory items.

Inventory items

In addition to its core coffee offerings, Fourth Coffee recently expanded its menu to include inventory items such as lunch items, snacks, and merchandise. Corporate team members constantly update inventory. Users can customize items. Corporate team members configure inventory items and associated images on the website.

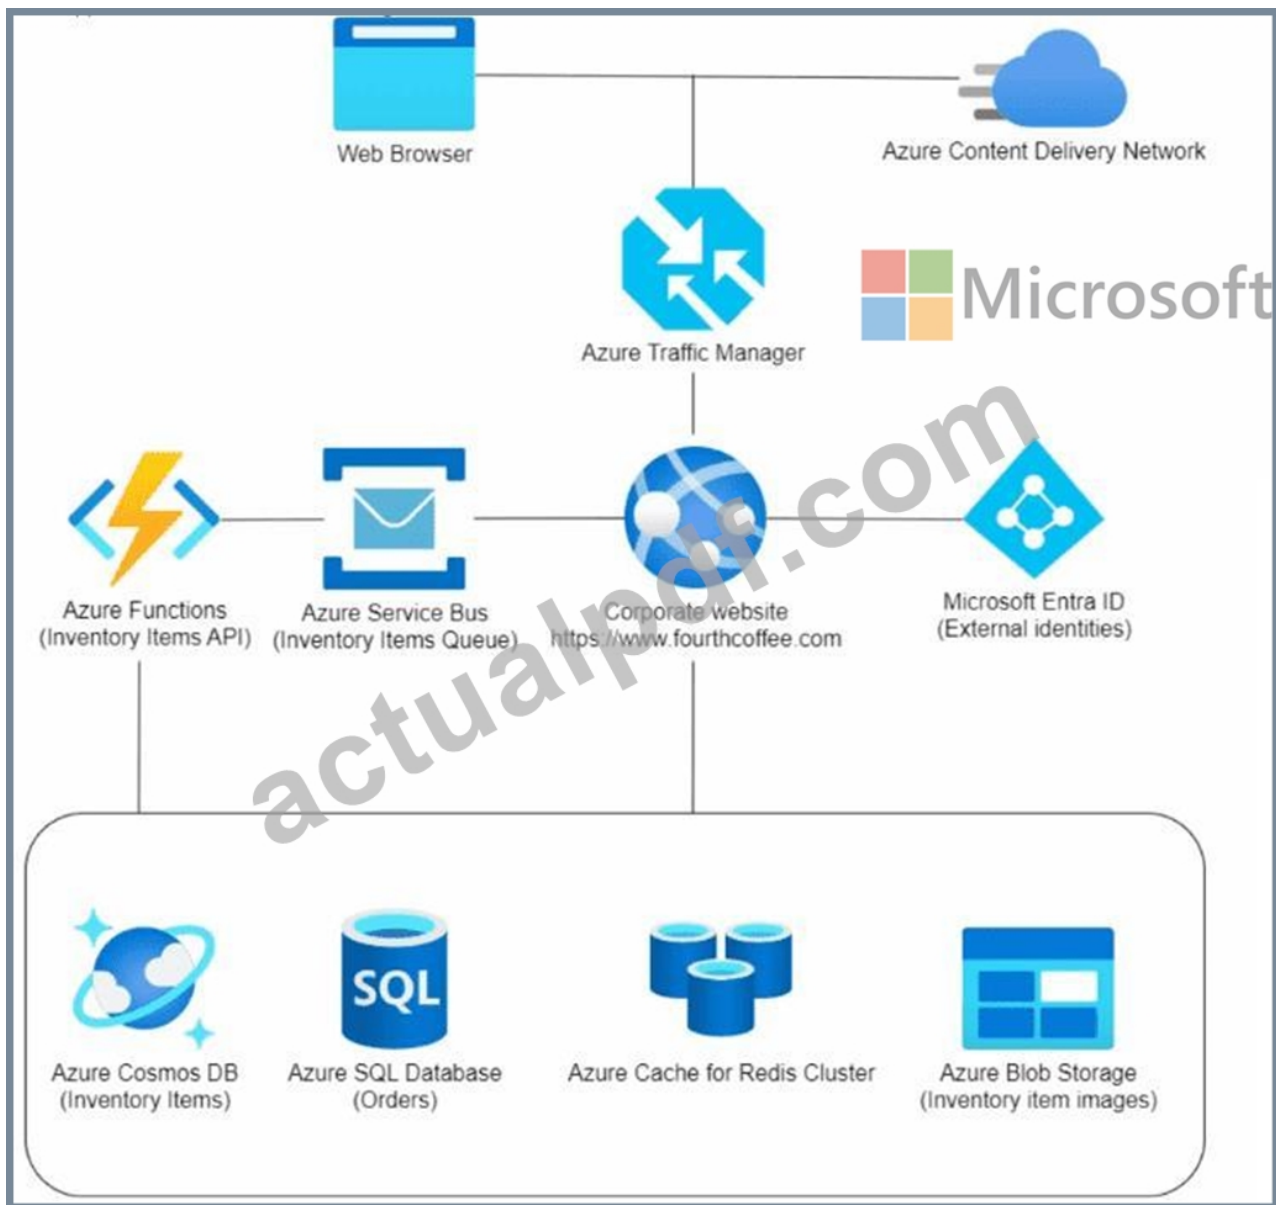

Orders

Associates in the store serve customized beverages and items to customers. Orders are placed on the website for pickup.

The application components process data as follows:

1. Azure Traffic Manager routes a user order request to the corporate website hosted in Azure App Service.
2. Azure Content Delivery Network serves static images and content to the user.
3. The user signs in to the application through a Microsoft Entra ID for customers tenant.
4. Users search for items and place an order on the website as item images are pulled from Azure Blob Storage
5. Item customizations are placed in an Azure Service Bus queue message.
6. Azure Functions processes item customizations and saves the customized items to Azure Cosmos DB.
7. The website saves order details to Azure SQL Database.
8. SQL Database query results are cached in Azure Cache for Redis to improve performance.

The application consists of the following Azure services:

#### Requirements

The application components must meet the following requirements:

- \* Azure Cosmos DB development must use a native API that receives the latest updates and stores data in a document format.
- \* Costs must be minimized for all Azure services.
- \* Developers must test Azure Blob Storage integrations locally before deployment to Azure Testing must support the latest versions of the Azure Storage APIs.

#### Corporate website

- \* User authentication and authorization must allow one-time passcode sign-in methods and social identity providers (Google or Facebook).
- \* Static web content must be stored closest to end users to reduce network latency.

#### Inventory items

- \* Customized items read from Azure Cosmos DB must maximize throughput while ensuring data is accurate for the current user on the website.
- \* Processing of inventory item updates must automatically scale and enable updates across an entire Azure Cosmos DB container.
- \* Inventory items must be processed in the order they were placed in the queue.
- \* Inventory item images must be stored as JPEG files in their native format to include exchangeable image file format (data) stored with the blob data upon upload of the image file.
- \* The Inventory Items API must securely access the Azure Cosmos DB data.

#### Orders

- \* Orders must receive inventory item changes automatically after inventory items are updated or saved.

#### Issues

- \* Developers are storing the Azure Cosmos DB credentials in an insecure clear text manner within the Inventory Items API code.
- \* Production Azure Cache for Redis maintenance has negatively affected application performance.

**NEW QUESTION # 85**

A company backs up all manufacturing data to Azure Blob Storage. Admins move blobs from hot storage to archive tier storage every month.

You must automatically move blocks to Archive tier after they have not been accessed for 180 days. The path for any item that is not archived must be placed in an existing queue. This operation must be performed automatically once a month. You set the value of TierAgeInDays to 180.

How should you configure the Logic App? To answer, drag the appropriate triggers or action blocks to the correct trigger or action slots. Each trigger or action block may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**TRIGGERS AND ACTION BLOCKS**

**Insert Entity**  
 \*Table: processing  
 \*Entity: Path

**Tier blob**  
 If blob is older than the defined value, tier it to Cool or Archive tier  
 \*Blob path: Path  
 \*Blob Tier: Archive

**When there are messages in a queue**  
 Queue Name: processing

**Recurrence**  
 Interval: 1  
 Frequency: Month

**Answer Area**

Logic App Designer canvas showing the following workflow:

- Empty slot
- ↓
- Set tier age variable
- ↓
- Set tier age variable
- ↓
- For each
- ↓
- Scan all blobs in this folder
- ↓
- Select an output from previous steps: value
- ↓
- When there are messages in a queue (Queue Name: processing)
- ↓
- if true
- ↓
- if false
- ↓
- Empty slot

Buttons at the bottom: Add an action

**Answer:**

**Explanation:**

### Triggers and Action Blocks

**Insert Entity**

\*Table: processing

\*Entity: Path

Show advanced options

**Tier blob**

If blob is older than the defined value, tier it to Cool or Archive tier

\*Blob path: Path

\*Blob Tier: Archive

**When there are messages in a queue**

\*Queue Name: processing

Show advanced options

Connected to tableStorageAccountConnection. Change connection.

**Recurrence**

\*Interval: 1

\*Frequency: Month

Show advanced options

### Answer Area

**Recurrence**

\*Interval: 1

\*Frequency: Month

Show advanced options

Set tier age variable

Set tier age variable

For each

Scan all blobs in this folder

Select an output from previous steps: value

**Insert Entity**

\*Table: processing

\*Entity: Path

Show advanced options

✓ If true

**Tier blob**

If blob is older than the defined value, tier it to Cool or Archive tier

\*Blob path: Path

\*Blob Tier: Archive

✗ if false

Empty action block

Add an action

Add an action

Add an action

## Answer Area

### NEW QUESTION # 86

An organization deploys a blob storage account. Users take multiple snapshots of the blob storage account over time. You need to delete all snapshots of the blob storage account. You must not delete the blob storage account itself. How should you complete the code segment? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

```
Delete (Azure.Storage.Blobs.Models.DeleteSnapshotsOption)
snapshotsOption = Azure.Storage.Blobs.Models.
```

DeleteSnapshotsOption  
DeleteIfExists  
DeleteSnapshotsOption  
WithSnapshot  
WithSnapshotCore

OnlySnapshots  
IncludeSnapshots  
None  
OnlySnapshots

Answer:

Explanation:

Answer Area

```
Delete (Azure.Storage.Blobs.Models.DeleteSnapshotsOption)
snapshotsOption = Azure.Storage.Blobs.Models.
```

DeleteSnapshotsOption  
DeleteIfExists  
DeleteSnapshotsOption  
WithSnapshot  
WithSnapshotCore

OnlySnapshots  
IncludeSnapshots  
None  
OnlySnapshots

## NEW QUESTION # 87

.....

Maybe you want to get the AZ-204 certification, but daily work and long-time traffic make you busier to improve yourself. Thanks to our AZ-204 training materials, you can learn for your certification anytime, everywhere. If you get our products, you will surely find a better self. As we all know, the best way to gain confidence is to do something successfully. With our AZ-204 Study Guide, you will easily pass the AZ-204 examination and gain more confidence.
