The ANS-C01 Exam is intended for experienced IT professionals who have already obtained the AWS Certified Solutions Architect - Associate certification or the AWS Certified Developer - Associate certification. Candidates for the ANS-C01 Exam should have at least five years of experience in designing and implementing network solutions on AWS, as well as experience with other networking technologies such as Cisco, Juniper, or F5.

The AWS Certified Advanced Networking Specialty certification is targeted towards individuals who are responsible for designing and implementing complex networking architectures on the AWS platform. AWS Certified Advanced Networking Specialty Exam certification exam focuses on various networking concepts and technologies, including network optimization and troubleshooting, network security, and connectivity, among others.

Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q265-Q270):

NEW QUESTION # 265

Why is referencing the Application Load Balancer or Classic Load Balancer by its DNS CNAME recommended?

Response:

- A. DNS CNAMEs provide a lower latency than IP addresses.
- B. IP addresses are public and open to the Internet.
- **C. IP addresses may change as the load balancers scale**
- D. You want to preserve the source IP of the client.

Answer: C

NEW QUESTION # 266

You are responsible for your company's AWS resources. You notice a significant amount of traffic from an IP address range in a foreign country where your company does not have customers. Further investigation of the traffic indicates that the source of the traffic is scanning for open ports on your Amazon EC2 instances.

Which one of the following resources can prevent the IP address from reaching the instances?

Response:

- A. Network Address Translation (NAT) gateway
- B. Security group
- **C. Network Access Control List (ACL)**
- D. A Virtual Private Cloud (VPC) endpoint

Answer: C

NEW QUESTION # 267

What is the primary defining characteristic of a public subnet?

Response:

- A. A permissive security group attached to the subnet
- B. A permissive Network ACL attached to the subnet
- C. A default route to the NAT Gateway
- **D. A default route to the Internet Gateway**

Answer: D

NEW QUESTION # 268

A company uses an AWS Direct Connect private VIF with a link aggregation group (LAG) that consists of two 10 Gbps connections. The company's security team has implemented a new requirement for external network connections to provide layer 2 encryption. The company's network team plans to use MACsec support for Direct Connect to meet the new requirement.

Which combination of steps should the network team take to implement this functionality?

(Choose three.)

- **A. Associate the MACsec Connectivity Association Key (CAK) and the Connection Key Name (CKN) with the new LAG.**
- **B. Create a new Direct Connect LAG with new circuits and ports that support MACsec.**
- C. Configure the MACsec encryption mode on each Direct Connect connection that makes up the existing LAG.
- D. Configure the MACsec encryption mode on the existing LAG.
- E. Associate the Internet Key Exchange (IKE) with the existing LAG.
- **F. Configure the MACsec encryption mode on the new LAG.**

Answer: A,B,F

Explanation:

To start using MACsec, you must turn the feature on when you create a dedicated connection
