Analytics-DA-201 Mock Test, Analytics-DA-201 Valid Exam Notes

When you see other people in different industry who feel relaxed with high salary, do you want to try another field? And is the difficulty of learning a new piece of knowledge often deterring you? It doesn't matter, now Analytics-DA-201 practice exam offers you a great opportunity to enter a new industry. Our Analytics-DA-201 learning material was compiled from the wisdom and sweat of many industry experts. And it is easy to learn and understand our Analytics-DA-201 exam questions.

Salesforce Certified Tableau Data Analyst Sample Questions (Q46-Q51):

NEW QUESTION # 46

You have a workbook that uses an extracted data source.

You publish the workbook to Tableau Server.

Which three actions can you perform from the Extract Refresh page in Tableau Server? Choose three.

- A. Delete the refresh.

- B. Change the refresh from full to incremental.
- C. Change the priority of the refresh.
- D. Modify the frequency of the refresh.
- E. Run a refresh.

Answer: A,C,E

NEW QUESTION # 47

You have the following table.

You need each record to alternate between grey and white.
What should you change in the Format Shading pane?

- A. the column banding size to 3
- B. the row banding size to 1
- C. the row banding size to 3
- D. the column banding size to 1

Answer: B

Explanation:

To have each record alternate between grey and white, you should change the row banding size to 1 in the Format Shading pane. This setting will ensure that each row has a different shading from the one above and below it, creating an alternating pattern of grey and white rows. References: The answer can be verified through practical application within Tableau or by consulting Tableau's official learning resources, such as Tableau Help: Format Shading or Tableau Training Pass: Formatting.

NEW QUESTION # 48

Which function should a Data Analyst use to average sales at a less-granular level of detail than is in the view?

- A. AVG
- B. RUNNING_AVG
- C. INCLUDE
- D. EXCLUDE

Answer: D

NEW QUESTION # 49

You have the following dataset.

When you use the dataset in a worksheet, you want Sales to appear automatically as shown in the following table.
What should you do?

- A. Change the default number format of the Sales field
- B. Change the data type of the Sales field to String
- C. Create a calculated field that uses a formula of 'S' * str (Round((sales],2)) + 'k'
- D. Create a calculated field that uses a formula of 'S' + str (< (Sales)/1000)).

Answer: A

Explanation:

To make Sales appear automatically as shown in the second table, you should change the default number format of the Sales field. The default number format is how Tableau displays a field when you drag it to a worksheet. You can change the default number format by right-clicking on the field and selecting Default Properties > Number Format from the menu. This will open a dialog box where you can choose a category, such as Currency or Percentage, and customize the options, such as decimal places or prefixes. In this case, you want to change the default number format of Sales to Currency with zero decimal places and a custom prefix of "S". This will make Sales appear as "S" followed by the rounded value in thousands. The other options are not correct for this scenario. Changing the data type of Sales to String will not affect how it appears on a worksheet. Creating a calculated field that uses a formula will not change the default number format of Sales, but create a new field that you have to drag to a worksheet. Converting Sales to Attribute will return only one value for each partition of data, which will not show any variation over time.

References: <https://help.tableau.com/current/pro/desktop/en-us/formatting.htm> https://help.tableau.com/current/pro/desktop/en-us/formatting_change_default.htm

To achieve the formatting as shown in the example, where sales figures are displayed with a "K" to represent thousands and rounded to the nearest thousand (e.g., \$20K, \$44K, etc.), you would need to adjust the default number format of the Sales field in Tableau. By changing the default number format, every instance where the Sales field is used would automatically reflect this new formatting. This is more efficient than creating a calculated field as it preserves the numeric nature of the field, allowing for further numerical operations and aggregations.

NEW QUESTION # 50

A colleague provides a Data Analyst with access to a folder that has the following files:

- * Sales.csv
- * Book1.json
- * Sales.tds
- * Export.mdb

Which file can contain information for connecting to an external data source, such as an SQL Server database?

- A. Book1.json
- B. Export.mdb
- C. Sales.csv
- D. Sales.tds

Answer: C

NEW QUESTION # 51

.....

The page of our Analytics-DA-201 simulating materials provides demo which are sample questions. The purpose of providing demo is to let customers understand our part of the topic and what is the form of our study materials when it is opened? In our minds, these two things are that customers who care about the Analytics-DA-201 Exam may be concerned about most. We will give you our software which is a clickable website that you can visit the product page. Red box marked in our Analytics-DA-201 exam practice is demo; you can download PDF version for free, and you can click all three formats to see.
