NEW QUESTION # 104

You need to configure a process model that runs every day at 10:00 AM. The process should start only at the specified time even when a newer version of the process model is published.

A Boolean type constant needs to be configured in the process model. The intended flow of the process should be executed only when the constant is True.

Which three steps should you perform? (Choose three.)

- A. Add an expression-based condition in the start node timer event to check for the constant to be True.
- B. Add a timer event in the start node.
- C. Add a XOR Gateway just after the start node to check for the constant to be True.
- D. Add an expression-based condition in the start node timer event to check for the specific time.
- E. Add a timer event just after the start node to check for the specific time.

Answer: B,C,D

Explanation:

Add a timer event in the start node to schedule the process to start at 10:00 AM every day.

Add a XOR Gateway after the start node to check the Boolean constant and control the flow based on its value.

Add an expression-based condition in the start node timer event to ensure the process starts only at the specified time.

NEW QUESTION # 105

What are three ways to optimize the memory usage of a process model? (Choose three.)

- A. Avoid storing large blocks of text in process variables.
- B. Minimize the use of subprocesses in the model.
- C. Decrease the number of process variables.
- D. Configure process variables as parameters.
- E. Pass data directly to activity nodes and smart services.
- F. Divide large nodes into multiple smaller nodes.

Answer: A,D,E

Explanation:

Passing data directly to activity nodes and smart services reduces unnecessary use of process variables, optimizing memory.

Configuring process variables as parameters limits their lifespan and persistence, saving memory.

Avoiding large blocks of text in process variables minimizes memory consumption within the process model.
