

Latest PCNSE Study Notes | Test PCNSE Lab Questions

PCNSE questions with complete solutions 2023 updated graded A+

AutoFocus - correct answer The AutoFocus threat intelligence service enables security teams to prioritize their response to unique, targeted attacks and gain the intelligence, analytics and context needed to protect your organization. It provides context around an attack spotted in your traffic and threat logs, such as the malware family, campaign, or malicious actor targeting your organization. AutoFocus correlates and gains intelligence from:

- o WildFire® service - the industry's largest threat analysis environment
- o PAN-DB URL filtering service
- o MineMeid application for AutoFocus, enabling aggregation and correlation of any third-party threat intelligence source directly in AutoFocus
- o Traps advanced endpoint protection
- o Aperture SaaS-protection service
- o Unit 42 threat intelligence and research team
- o Intelligence from technology partners
- o Palo Alto Networks global passive DNS network

GlobalProtect Secure Mobile Workforce - correct answer GlobalProtect cloud service reduces the operational burden associated with securing your remote networks and mobile users by leveraging a cloud-based security infrastructure managed by Palo Alto Networks. Uses client software to build secure personal VPN tunnels to the firewall.

URL Filtering Web Security - correct answer A firewall subscription/license. Most attacks and exposure to malicious content occurs during the normal course of web browsing activities, which requires the ability to allow safe, secure web access for all users. URL Filtering with PAN-DB automatically prevents attacks that leverage the web as an attack vector, including phishing links in emails, phishing sites, HTTP-based command and control, malicious sites and pages that carry exploit kits. Focuses on preventing access to PHISHING WEBSITES!!!

Active/Active HA - correct answer Both Active, used in specific circumstances, such as asynchronous routing setups. Both individually maintain routing and session tables, sync'd to the other. HIGHER RISK!

Active/Passive HA - correct answer One active, one standby firewall. Easiest to manage. Network, Objects, Policies Certificates and Session Table changes are synced.

Single Pass Architecture (SP3) - correct answer How a Palo Alto FW processes a packet with different variables which include: SRC/DST Zones, SRC/DST IPs, App-ID, User-ID, Content ID.

Test PCNSE Lab Questions - PCNSE Exam Review

If you follow the steps of our PCNSE exam questions, you can easily and happily learn and ultimately succeed in the ocean of learning. And our PCNSE exam questions can help you pass the PCNSE exam for sure. Choosing our PCNSE exam questions actually means that you will have more opportunities to be promoted in the near future. We are confident that in the future, our

PCNSE Study Tool will be more attractive and the pass rate will be further enhanced. For now, the high pass rate of our PCNSE exam questions is more than 98%.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q82-Q87):

NEW QUESTION # 82

An administrator connected a new fiber cable and transceiver to interface Ethernet1/1 on a Palo Alto Networks firewall. However, the link does not seem to be coming up.

If an administrator were to troubleshoot, how would they confirm the transceiver type, tx-power, rx-power, vendor name, and part number via the CLI?

- A. **show system state filter ethernet1/1**
- B. show chassis status slot s1
- C. show system state filter sw.dev.interface.config
- D. show system state filter-pretty sys.s1.*

Answer: A

Explanation:

According to the Palo Alto Networks documentation¹, the command `show system state filter` displays the current state of the system and allows you to filter the output by a specific keyword. The keyword `ethernet1/1` matches the interface name that the administrator wants to troubleshoot. The output of this command will show information about the transceiver type, tx-power, rx-power, vendor name, and part number for that interface². Therefore, the correct answer is D. Reference: 1: <https://docs.paloaltonetworks.com/pan-os/9-1/pan-os-cli-quick-start/use-the-cli/find-a-command> 2: <https://knowledgebase.paloaltonetworks.com/KCSArticleDetail?id=kA10g000000C1FmCAK>

NEW QUESTION # 83

During the implementation of SSL Forward Proxy decryption, an administrator imports the company's Enterprise Root CA and Intermediate CA certificates onto the firewall. The company's Root and Intermediate CA certificates are also distributed to trusted devices using Group Policy and GlobalProtect. Additional device certificates and/or Subordinate certificates requiring an Enterprise CA chain of trust are signed by the company's Intermediate CA.

Which method should the administrator use when creating Forward Trust and Forward Untrust certificates on the firewall for use with decryption?

- A. **Generate a CA certificate for Forward Trust and a self-signed CA for Forward Untrust.**
- B. Generate two subordinate CA certificates, one for Forward Trust and one for Forward Untrust.
- C. Generate a single self-signed CA certificate for Forward Trust and another for Forward Untrust
- D. Generate a single subordinate CA certificate for both Forward Trust and Forward Untrust.

Answer: A

Explanation:

<https://docs.paloaltonetworks.com/pan-os/10-2/pan-os-admin/decryption/configure-ssl-forward-proxy>

NEW QUESTION # 84

An organization conducts research on the benefits of leveraging the Web Proxy feature of PAN-OS 11.0.

What are two benefits of using an explicit proxy method versus a transparent proxy method? (Choose two.)

- A. **Explicit proxy supports interception of traffic using non-standard HTTPS ports.**
- B. It supports the X-Authenticated-User (XAU) header, which contains the authenticated username in the outgoing request
- C. No client configuration is required for explicit proxy, which simplifies the deployment complexity.
- D. **Explicit proxy allows for easier troubleshooting, since the client browser is aware of the existence of the proxy.**

Answer: A,D

Explanation:

* B. Explicit proxy allows for easier troubleshooting, since the client browser is aware of the existence of the proxy¹². This means that the client can see the proxy's IP address and port number, and can use tools like ping or traceroute to check connectivity and

latency issues. Transparent proxies are invisible to the client browser, which makes it harder to diagnose problems.

* C. Explicit proxy supports interception of traffic using non-standard HTTPS ports. This means that the proxy can handle HTTPS requests that use ports other than 443, which may be required by some applications or websites. Transparent proxies can only intercept HTTPS traffic on port 443, which limits their functionality.

NEW QUESTION # 85

An administrator encountered problems with inbound decryption. Which option should the administrator investigate as part of triage?

- A. Firewall connectivity to a CRL
- **B. Importation of a certificate from an HSM**
- C. Root certificate imported into the firewall with "Trust" enabled
- D. Security policy rule allowing SSL to the target server

Answer: B

Explanation:

Reference:

NEW QUESTION # 86

A system administrator runs a port scan using the company tool as part of vulnerability check.

The administrator finds that the scan is identified as a threat and is dropped by the firewall.

After further investigating the logs, the administrator finds that the scan is dropped in the Threat Logs. What should the administrator do to allow the tool to scan through the firewall?

- A. Change the TCP port scan action from Block to Alert in the Zone Protection profile.
- B. Remove the Zone Protection profile from the zone setting.
- C. Add the tool IP address to the reconnaissance protection source address exclusion in the Zone Protection profile.
- **D. Add the tool IP address to the reconnaissance protection source address exclusion in the DoS Protection profile.**

Answer: D

Explanation:

<https://docs.paloaltonetworks.com/pan-os/10-2/pan-os-admin/zone-protection-and-dos-protection/configure-zone-protection-to-increase-network-security/configure-reconnaissance-protection>

NEW QUESTION # 87

.....

Our PCNSE practice quiz will be the optimum resource. Many customers claimed that our study materials made them at once enlightened after using them for review. If you are still tentative about our PCNSE exam dumps, and some exam candidate remain ambivalent to the decision of whether to choose our PCNSE Training Materials, there are free demos for your reference for we understand your hesitation.

Test PCNSE Lab Questions: <https://www.prepawaypdf.com/Palo-Alto-Networks/PCNSE-practice-exam-dumps.html>

If our Test PCNSE Lab Questions - Palo Alto Networks Certified Network Security Engineer Exam guide torrent can't help you pass the exam, we will refund you in full, Palo Alto Networks Latest PCNSE Study Notes So your chance of getting success will be increased greatly by our materials, Palo Alto Networks Latest PCNSE Study Notes You just need to pay attention to you email box regularly, We guarantee your success in the first attempt, If you do not pass the Palo Alto Networks PCNSE exam on your first attempt using our ITCert-Online testing engine, we will give you a FULL REFUND of your purchasing fee. You need to send the scanning copy of your Palo Alto Networks PCNSE examination report card to us.
