## Mule-Dev-201 Certification Dumps | Mule-Dev-201 Valid Test Sims

If you are new to our website and our Mule-Dev-201 study materials, you may feel doubt our quality. It is ok that you can free download the demos of the Mule-Dev-201 exam questions. You can feel the characteristics of our Mule-Dev-201 practice guide and whether they are suitable for you from the trial. After your payment, we'll send you a connection of our Mule-Dev-201 Practice Engine in 5 to 10 minutes and you can download immediately without wasting your valuable time.

## Salesforce Certified MuleSoft Developer Sample Questions (Q173-Q178):

### NEW QUESTION # 173

Refer to the exhibits.

A web client sends a GET request to the HTTP Listener.

What response message is returned to the web client?

□

- A. "Start"
- B. ""

- C. "End"
- D. "String is not blank"

**Answer: C**

Explanation:

1. SetPayload "Start"
2. 'Is Blank String' Creates an Error object with #[error.description] ="String is not blank"
3. Default Error Handler catches and Propagates error
4. 'On Error Propagate' is 'RED IN RED OUT'. It Returns Status Code : 500 & #[error.description]

----- Correct

answer is String is not blank. Because validation component will throw an error as payload is not blank.

Graphical user interface, text, application, email Description automatically generated

Graphical user interface, text, application, email Description automatically generated

□

- A. Java
- B. Object
- C. String
- D. XML

**Answer: C**

Explanation:

String is the correct answer as XML is of an Object type String

### NEW QUESTION # 177

A Scatter-Gather processes three separate HTTP requests. Each request returns a Mule event with a JSON payload. What is the final output of the Scatter-Gather?

- A. An Array of the three Mule event Objects
- B. An Object containing all three JSON payload Objects
- **C. An Object containing all three Mule event Objects**
- D. An Array of the three JSON payload Objects

**Answer: C**

Explanation:

Correct answer is An Object containing all three Mule event Objects

The Scatter-Gather component is a routing event processor that processes a Mule event through different parallel processing routes that contain different event processors. Each route receives a reference to the Mule event and executes a sequence of one or more event processors. Each of these routes uses a separate thread to execute the event processors, and the resulting Mule event can be either the same Mule event without modifications or a new Mule event with its own payload, attributes, and variables. The Scatter-Gather component then combines the Mule events returned by each processing route into a new Mule event that is passed to the next event processor only after every route completes successfully.

The Scatter-Gather component executes each route in parallel, not sequentially. Parallel execution of routes can greatly increase the efficiency of your Mule application and may provide more information than sequential processing.

Sample output is as below
