

2V0-17.25 Valid Exam Cost & Valid 2V0-17.25 Exam Pattern

DOWNLOAD the newest PassSureExam 2V0-17.25 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1IQobY9awdn79Ob--QrKU1IuOQFCpyUTj>

The world is changing rapidly and the requirements to the employees are higher than ever before. If you want to find an ideal job and earn a high income you must boost good working abilities and profound major knowledge. Passing 2V0-17.25 certification can help you realize your dreams. If you buy our product, we will provide you with the best VCP-VCF Administrator study materials and it can help you obtain 2V0-17.25 certification. Our product is of high quality and our service is perfect.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 2	<ul style="list-style-type: none"> VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 3	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.

Topic 4	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.

Quiz 2026 High-quality VMware 2V0-17.25: VMware Cloud Foundation 9.0 Administrator Valid Exam Cost

It is very convenient for all people to use the 2V0-17.25 study materials from our company. Our study materials will help a lot of people to solve many problems if they buy our products. The online version of 2V0-17.25 study materials from our company is not limited to any equipment, which means you can apply our study materials to all electronic equipment, including the telephone, computer and so on. So the online version of the 2V0-17.25 Study Materials from our company will be very useful for you to prepare for your exam. We believe that our study materials will be a good choice for you.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q104-Q109):

NEW QUESTION # 104

An administrator is tasked to upgrade an existing VMware vSphere 8 only environment to VMware Cloud Foundation (VCF) 9.0. Which three components must be deployed as part of the upgrade to VCF 9.0? (Choose three.)

- A. VCF Operations for logs
- B. VCF Identity Broker
- C. VCF Operations
- D. VCF Operations fleet management
- E. VCF Operations for networks
- F. VCF Operations collector

Answer: C,D,E

Explanation:

References: VMware Cloud Foundation 9.0 Deployment Guide - Core Components for VCF Instance Deployment and Fleet Architecture Overview.

NEW QUESTION # 105

A cluster is experiencing frequent host disconnects. Which troubleshooting steps or checks might help identify the root cause?

- A. Testing DNS resolution for forward and reverse lookups
- B. Deleting the cluster and re-adding all hosts manually
- C. Confirming that firewall ports for management traffic are open
- D. Reviewing vpxd.log and hostd.log for errors

Answer: A,C,D

Explanation:

Checking logs (A), ensuring correct firewall rules (B), and verifying DNS resolution (D) are key. Deleting and recreating the cluster (C) is rarely the first step and may cause more disruption.

NEW QUESTION # 106

An organization uses VMware Cloud Foundation (VCF) Operations to monitor and troubleshoot issues within their VCF fleet.

As part of an incident review following a recent critical event, the administrator noted that some important event data about the issue was missing from VCF Operations.

What optional VCF solution should the administrator implement to provide additional data to help troubleshoot in the future?

- **A. VCF Operations for logs**
- B. VCF Automation
- C. VCF Operations Diagnostics
- D. VCF Operations Management Pack for VCF

Answer: A

Explanation:

VCF Operations primarily focuses on metrics, performance, and health monitoring. However, detailed event-level data, log entries, and historical audit records are not fully captured unless log aggregation is enabled.

The VMware Cloud Foundation 9.0 documentation explains:

"VCF Operations for Logs provides centralized log aggregation and analytics across all VCF components, including ESXi, vCenter, NSX, and other infrastructure services." This solution enhances troubleshooting by:

Collecting syslogs and events from infrastructure components

Providing searchable log data

Correlating events across services

Retaining detailed historical log information

Other options are incorrect:

Management Pack (A) extends metrics, not detailed logs.

VCF Automation (B) is unrelated to troubleshooting logs.

Operations Diagnostics (C) is not the primary log aggregation solution.

Therefore, to capture missing event data for future incidents, the administrator should deploy VCF Operations for Logs.

NEW QUESTION # 107

When designing a host cluster for high availability (HA) and resource optimization, which features or considerations should be taken into account?

- **A. vSAN policies for storage redundancy**
- **B. Network segmentation for vMotion traffic**
- **C. DRS for automated load balancing**
- D. Enabling SSH for all users by default

Answer: A,B,C

Explanation:

HA and resource optimization focus on load balancing (DRS), storage redundancy (vSAN), and proper network design (segmentation for vMotion). Granting SSH access to all users by default (D) is a security risk and not a standard best practice for an HA design.

NEW QUESTION # 108

An administrator of a VMware Cloud Foundation (VCF) fleet is tasked to delegate the resource management of a group of Virtual Machines (VMs) to another department. The following information is provided:

- * VMs should power on only if resources are available.
- * The VMs are within development and production environments.
- * The production VMs require guaranteed levels of resources.
- * The VMs support a three-tier application within each environment.
- * Each tier of the application has varying levels of demand.

What VCF feature should the administrator use to manage these VMs?

- **A. vSphere Resource Pools**
- B. VCF Operations
- C. vSphere Availability
- D. vSphere Dynamic Resource Scheduling

Answer: A
