

# Reliable Dump AZ-400 Torrent bring you the best AZ-400 Valid Exam Format for Microsoft Designing and Implementing Microsoft DevOps Solutions

P.S. Free 2026 Microsoft AZ-400 dumps are available on Google Drive shared by ExamCost: <https://drive.google.com/open?id=1aGdt-gGXNStex82fx01msgxgKL55Vzue>

The development of society urges us to advance and use our AZ-400 study materials to make us progress faster and become the leader of this era. The best you need is the best AZ-400 exam preparation materials. Our AZ-400 Exam simulation will accompany you to a better future with success guaranteed. You may be surprised to find that our pass rate for the AZ-400 learning guide is high as 98% to 100%.

Microsoft AZ-400 certification exam is a valuable credential for professionals in the DevOps field. It validates the candidate's knowledge and skills in designing and implementing Microsoft DevOps solutions and can open up new career opportunities. With the growing demand for DevOps professionals, earning the AZ-400 certification can help individuals stand out in the job market and advance their careers.

Candidates who pass the Microsoft AZ-400 Exam will earn the Microsoft Certified: DevOps Engineer Expert certification. Designing and Implementing Microsoft DevOps Solutions certification is highly valued in the IT industry and can lead to many career opportunities. It demonstrates that the certificate holder has the skills and knowledge to design and implement DevOps solutions using Microsoft Azure technologies.

**High Pass Rate Designing and Implementing Microsoft DevOps Solutions  
Test Torrent is Convenient to Download - ExamCost**

We will have a dedicated specialist to check if our AZ-400 learning materials are updated daily. We can guarantee that our AZ-400 exam question will keep up with the changes by updating the system, and we will do our best to help our customers obtain the latest information on learning materials to meet their needs. If you choose to purchase our AZ-400 quiz torrent, you will have the right to get the update system and the update system is free of charge. We do not charge any additional fees. Once our AZ-400 Learning Materials are updated, we will automatically send you the latest information about our AZ-400 exam question. We assure you that our company will provide customers with a sustainable update system.

The AZ-400 exam has been designed to test the candidate's ability to design and implement DevOps solutions using Microsoft Azure technologies. AZ-400 exam covers a wide range of topics, including DevOps practices, continuous integration and delivery, infrastructure and configuration management, monitoring and feedback, and security and compliance. Candidates are required to have a solid understanding of Microsoft Azure and should have experience working with Azure DevOps, Azure Resource Manager templates, and Azure services like Azure App Service, Azure Kubernetes Service, and Azure Functions. The AZ-400 Exam is a challenging certification that requires a deep understanding of DevOps and a thorough knowledge of Microsoft Azure technologies.

## Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q281-Q286):

### NEW QUESTION # 281

You need to configure Azure Automation for the computer in Group7.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Run the <code>Import-AzureRmAutomationDscConfiguration</code> Azure PowerShell cmdlet.	
Create a Desired State Configuration (DSC) configuration file that has an extension of .ps1.	
Run the <code>New-AzureRmResourceGroupDeployment</code> Azure PowerShell cmdlet.	
Run the <code>Start-AzureRmAutomationDscCompilationJob</code> Azure PowerShell cmdlet.	
Create an Azure Resource Manager template file that has an extension of .json.	

**Answer:**

**Explanation:**

Actions	Answer Area
Run the <code>Import-AzureRmAutomationDscConfiguration</code> Azure PowerShell cmdlet.	
Create a Desired State Configuration (DSC) configuration file that has an extension of .ps1.	
Run the <code>New-AzureRmResourceGroupDeployment</code> Azure PowerShell cmdlet.	
Run the <code>Start-AzureRmAutomationDscCompilationJob</code> Azure PowerShell cmdlet.	
Create an Azure Resource Manager template file that has an extension of .json.	

Answer Area
Create a Desired State Configuration (DSC) configuration file that has an extension of .ps1.
Run the <code>Import-AzureRmAutomationDscConfiguration</code> Azure PowerShell cmdlet.
Run the <code>Start-AzureRmAutomationDscCompilationJob</code> Azure PowerShell cmdlet.

**Explanation**

Create a Desired State Configuration (DSC) configuration file that has an extension of .ps1.

Run the Import-AzureRmAutomationDscConfiguration Azure PowerShell cmdlet.

Run the Start-AzureRmAutomationDscCompilationJob Azure PowerShell cmdlet.

Step 1: Create a Desired State Configuration (DSC) configuration file that has an extension of .ps1.

Step 2: Run the Import-AzureRmAutomationDscConfiguration Azure Powershell cmdlet The Import-AzureRmAutomationDscConfiguration cmdlet imports an APS Desired State Configuration (DSC) configuration into Azure Automation. Specify the path of an APS script that contains a single DSC configuration.

Example:

PS C:\>Import-AzureRmAutomationDscConfiguration -AutomationAccountName "Contoso17"-ResourceGroupName "ResourceGroup01" -SourcePath "C:\DSC\client.ps1" -Force This command imports the DSC configuration in the file named client.ps1 into the Automation account named Contoso17. The command specifies the Force parameter. If there is an existing DSC configuration, this command replaces it.

Step 3: Run the Start-AzureRmAutomationDscCompilationJob Azure Powershell cmdlet The Start-AzureRmAutomationDscCompilationJob cmdlet compiles an APS Desired State Configuration (DSC) configuration in Azure Automation.

### NEW QUESTION # 282

You are configuring Azure Pipelines for three projects in Azure DevOps as shown in the following table.

Project name	Project Details
Project1	The project team provides preconfigured YAML files that it wants to use to manage future pipeline configuration changes.
Project2	The sensitivity of the project requires that the source code be hosted on the managed Windows server on your company's network.
Project3	The project team requires a centralized version control system to ensure that developers work with the most recent version.

Which version control system should you recommend for each project? To answer, drag the appropriate version control systems to the correct projects. Each version control system may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Version Control Systems	Answer Area
Assembla Subversion	Project1: <input type="text"/>
Bitbucket Cloud	Project2: <input type="text"/>
Git in Azure Repos	Project3: <input type="text"/>
GitHub Enterprise	

Answer:

Explanation:

Version Control Systems	Answer Area
Assembla Subversion	Project1: Git in Azure Repos
Bitbucket Cloud	Project2: GitHub Enterprise
Git in Azure Repos	Project3: Bitbucket Cloud
GitHub Enterprise	

 Microsoft

Explanation:

Project1:	Git in Azure Repos
Project2:	GitHub Enterprise
Project3:	Bitbucket Cloud

 Microsoft

Project1: Git in Azure Repos

Project2: Github Enterprise

GitHub Enterprise is the on-premises version of GitHub.com. GitHub Enterprise includes the same great set of features as GitHub.com but packaged for running on your organization's local network. All repository data is stored on machines that you control, and access is integrated with your organization's authentication system (LDAP, SAML, or CAS).

Project3: Bitbucket cloud

One downside, however, is that Bitbucket does not include support for SVN but this can be easily amended migrating the SVN repos to Git with tools such as SVN Mirror for Bitbucket .

Note: SVN is a centralized version control system

### NEW QUESTION # 283

You need to create a notification if the peak average response time of an Azure web app named az400-9940427-main is more than five seconds when evaluated during a five-minute period. The notification must trigger the "https://contoso.com/notify" webhook. To complete this task, sign in to the Microsoft Azure portal.

- A. See solution below

**Answer: A**

Explanation:

1. Open Microsoft Azure Portal
2. Log into your Azure account and go to App Service and look under Monitoring then you will see Alert.
3. Select Add an alert rule
4. Configure the alert rule as per below and click Ok.

Source: Alert on Metrics

Resource Group: az400-9940427-main

Resource: az400-9940427-main

Threshold: 5

Period: Over the last 5 minutes

Webhook: https://contoso.com/notify

**Add an alert rule**

\* Threshold ⓘ  
1 bytes/second

\* Period ⓘ

#### NEW QUESTION # 284

Your company plans to deploy an application to the following endpoints:

- \* Ten virtual machines hosted in Azure

- \* Ten virtual machines hosted in an on-premises data center environment All the virtual machines have the Azure Pipelines agent.

You need to implement a release strategy for deploying the application to the endpoints.

What should you recommend using to deploy the application to the endpoints? To answer, drag the appropriate components to the correct endpoints. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Components**

A deployment group

A management group

A resource group

Application roles

**Answer Area**

Ten virtual machines hosted in Azure:

Ten virtual machines hosted in an on-premises data center environment:

**Answer:**

Explanation:

Components	Answer Area
A deployment group	
A management group	Ten virtual machines hosted in Azure: A deployment group
A resource group	Ten virtual machines hosted in an on-premises data center environment: A deployment group
Application roles	

Explanation:

Box 1: A deployment group

When authoring an Azure Pipelines or TFS Release pipeline, you can specify the deployment targets for a job using a deployment group.

If the target machines are Azure VMs, you can quickly and easily prepare them by installing the Azure Pipelines Agent Azure VM extension on each of the VMs, or by using the Azure Resource Group Deployment task in your release pipeline to create a deployment group dynamically.

Box 2: A deployment group

References: <https://docs.microsoft.com/en-us/azure/devops/pipelines/release/deployment-groups>

#### NEW QUESTION # 285

You use GitHub Enterprise for source control repositories. The repositories store C# code. You need to enable CodeQL scanning for the repositories. What should you do?

- A. Enable Dependabot security updates.
- **B. Configure a required GitHub Actions workflow for all the repositories.**
- C. Push a GitHub Actions workflow to all the repositories.
- D. Enable Dependabot alerts.

Answer: B
