Free PDF 2026 SAP Fantastic C-SEC-2405: SAP Certified Associate - Security Administrator Test Simulator Fee

No matter you are exam candidates of high caliber or newbies, our SAP C-SEC-2405 exam quiz will be your propulsion to gain the best results with least time and reasonable money. Not only because the outstanding content of SAP Certified Associate - Security Administrator C-SEC-2405 Real Dumps that produced by our professional expert but also for the reason that we have excellent vocational moral to improve our SAP Certified Associate - Security Administrator C-SEC-2405 learning materials quality.

SAP Certified Associate - Security Administrator Sample Questions (Q28-Q33):

NEW QUESTION # 28

In SAP S/4HANA Cloud Public Edition, what can you do with the Display Authorization Trace? Note: There are 3 correct answers to this question.

- A. Adjust role restrictions to further limit access when performing forensic analysis
- B. Analyze authorization check results for already assigned authorizations
- C. Adjust role restrictions to account for missing authorizations
- D. Display business roles granting specific access
- E. Analyze authorization check results for missing authorizations

Answer: B,D,E

NEW QUESTION # 29

Which limitations apply to restricted users in SAP HANA Cloud? Note: There are 3 correct answers to this question.

- A. They can only connect to the database using HTTP/HTTPS.
- B. They can only create objects in their own database schema.
- C. They cannot connect via ODBC or JDBC.
- D. They cannot create objects in the database.
- E. They only have full SQL access via the SQL console.

Answer: A,B,D

NEW QUESTION # 30

What does a status text value of "Old" mean during the maintenance of authorizations for an existing role?

- A. Field values were changed as a result of the merge process.
- B. The field delivered with content was changed but the old value was retained.
- C. Field values were unchanged and no new authorization was added.
- D. Field values have not been changed.

Answer: C

Explanation:

In SAP role maintenance, a status text value of "Old" indicates that the field values for an authorization in an existing role were unchanged and no new authorizations were added. This status appears during PFCG role maintenance when comparing or updating authorizations, showing that the authorization object or field values have not been modified since the last maintenance and no additional permissions have been included. It reflects a stable state, ensuring that the role's existing permissions remain intact without unintended changes.

Option A is less precise, as it does not address the absence of new authorizations. Option B describes a scenario where changes were made but reverted, which is not "Old." Option C relates to merged authorizations, not the "Old" status. The "Old" status helps administrators confirm that no updates were applied, supporting consistent role management and preventing accidental modifications during maintenance in SAP systems.

NEW QUESTION # 31

You are building a PFCG role for access to an SAP Fiori app on your SAP S/4HANA on-premise system.

After you enter the catalog in the role menu, an entry for an OData service is missing and you have to add it manually to the role menu. When you maintain authorization data in the PFCG role, why does SAP recommend that you NOT maintain the SRV_NAME field value of the S_SERVICE authorization object manually?

- A. Because the TADIR Service name for the back-end server component was automatically added to the role menu.
- B. Because the TADIR Service name is the same for the front-end server component and the back-end server component.
- C. Because the SRV_NAME hash value for the front-end server component and back-end server component are the same.
- D. Because the SRV_NAME hash value for the front-end server component and back-end server component are different.

Answer: D

NEW QUESTION # 32

What is required to centrally administer a user's master record using Central User Administration? Note: There are 3 correct answers to this question.

- A. An existing master record in the target client for the user
- B. An RFC destination to the target system
- C. An ALE distribution model
- D. An RFC destination to the target client
- E. An entry in transaction BD54 for the child system

Answer: C,D,E

Explanation:

Central User Administration (CUA) in SAP enables centralized management of user master records across multiple systems. To implement CUA, an ALE (Application Link Enabling) distribution model is required to define the data exchange between the CUA master system and child systems, ensuring user data is consistently distributed. An RFC (Remote Function Call) destination to the target client is necessary to establish a secure communication channel for transmitting user data to specific clients in the child systems. Additionally, an entry in transaction BD54 (Logical Systems) for the child system is needed to define the child system as a logical system in the CUA landscape, enabling it to receive user data. An RFC destination to the target system (not client-specific) is less precise, and an existing master record in the target client is not required, as CUA creates or updates these records centrally. These components ensure that CUA operates effectively, streamlining user administration while maintaining security and consistency across SAP systems.

NEW QUESTION # 33

.....

The C-SEC-2405 test torrent also offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. Therefore, for your convenience, more choices are provided for you, we are pleased to suggest you to choose our C-SEC-2405 Exam Question for your exam. So with our C-SEC-2405 guide torrents, you are able to pass the exam more easily in the most efficient and productive way and learn how to study with dedication and enthusiasm, which can be a valuable asset in your whole life. It must be your best tool to pass your exam and achieve your target.
