SC-401 Exam Test - SC-401 Practice Tests

We have professional technicians to check the website at times, therefore we can provide you with a clean and safe shopping environment if you buy SC-401 training materials. In addition, we have free demo for you before purchasing, so that you can have a better understanding of what you are going to buying. Free update for 365 days is available, and you can get the latest information for the SC-401 Exam Dumps without spending extra money. We have online and offline chat service stuff, and they possess the professional knowledge for the SC-401 training materials, if you have any questions, just contact us.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q189-Q194):

NEW QUESTION # 189

Hotspot Question

You have a Microsoft 365 E5 subscription that contains the sensitive information types (SITs) shown in the following table.

Name	Detection method
SIT1	Fingerprint
SIT2	Regular expression

You plan to create the policies shown in the following table and assign them to a Microsoft SharePoint Online site.

Name	Type
DLP1	Data loss prevention (DLP) policy
Retention1	Retention label auto-labeling policy
Sensitivity1	Sensitivity label auto-labeling policy

Which policies can use SIT1, and which policies can use SIT2? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

SIT1:

- DLP1 only
- Retention1 only
- DLP1 and Retention1 only
- Retention1 and Sensitivity1 only
- DLP1, Retention1, and Sensitivity1

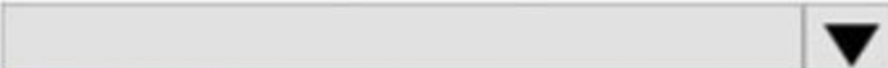

SIT2:

- DLP1 only
- Retention1 only
- DLP1 and Retention1 only
- Retention1 and Sensitivity1 only
- DLP1, Retention1, and Sensitivity1

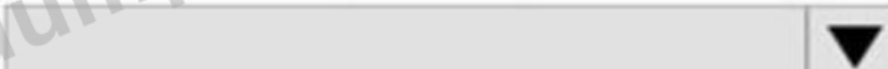

Answer:

Explanation:

Answer Area

SIT1: 

DLP1 only
Retention1 only
DLP1 and Retention1 only
Retention1 and Sensitivity1 only
DLP1, Retention1, and Sensitivity1

SIT2: 

DLP1 only
Retention1 only
DLP1 and Retention1 only
Retention1 and Sensitivity1 only
DLP1, Retention1, and Sensitivity1

Explanation:

Box 1: DLP1 only

Document fingerprinting in Microsoft Purview creates sensitive information types (SITs) usable only in Data Loss Prevention (DLP) policies across Exchange, SharePoint, OneDrive, Teams, and Devices, as well as Microsoft Information Protection (MIP) auto-labeling in Exchange, SharePoint, and OneDrive.

Box 2: DLP1, Retention1, and Sensitivity1

Regex-based custom SITs support broader Purview solutions including DLP policies, retention policies, and sensitivity label auto-apply rules, enabling pattern matching for sensitive data detection across compliance workloads.

NEW QUESTION # 190

You have a Microsoft 365 ES subscription.

From the Microsoft Purview Data Security Posture Management for AI portal, you review the recommendations for AI data security. You plan to create a one-click policy to block elevated risk users from pasting or uploading sensitive data to AI websites. How will the policy be configured? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

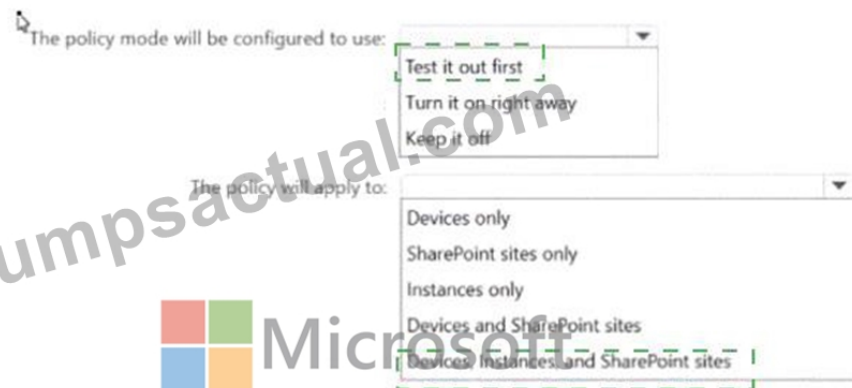

Answer Area

Answer:

Explanation:

Answer Area

Explanation:

Answer Area

This question is about creating a one-click policy within Microsoft Purview's Data Security Posture Management for AI portal. These policies are designed to mitigate risks associated with sensitive data and AI websites. The correct configuration for this specific scenario is to select "Test it out first" and apply the policy to "Devices, Instances, and SharePoint sites." This configuration is based on Microsoft's recommended practices for deploying data loss prevention (DLP) and similar policies.

Policy Mode: "Test it out first"

Microsoft recommends using test mode for new policies to evaluate their impact and effectiveness before enforcing them. This approach prevents unintended disruptions to user workflows. In test mode, the policy monitors and audits the specified activities without blocking them. It generates alerts and reports, allowing administrators to review the policy's behavior and make necessary adjustments. This aligns with the principle of "start small, then scale," ensuring that a policy designed to block sensitive data transfers doesn't inadvertently prevent legitimate business activities.

Policy Scope: "Devices, Instances, and SharePoint sites"

The policy aims to block users from pasting or uploading sensitive data to AI websites. This requires a comprehensive scope to cover all potential data exfiltration points.

Devices: This covers the user's local device, preventing data from being uploaded or pasted from applications running on the machine. This is crucial for controlling data from endpoints.

Instances: This refers to SaaS (Software as a Service) instances, including AI websites. Applying the policy to instances ensures that data transfers to these external services are monitored and controlled.

SharePoint sites: Data residing in SharePoint is a common source of sensitive information. Including SharePoint sites in the policy scope ensures that data cannot be directly copied from these locations and uploaded to AI websites, providing a holistic security posture.

By selecting "Devices, Instances, and SharePoint sites," the policy is configured to monitor and protect data across the most common sources and destinations, providing a robust defense against data exfiltration to AI services. This comprehensive approach is a cornerstone of modern data security strategies in Microsoft 365.

This information is verifiable through Microsoft's official documentation for Microsoft Purview, particularly sections related to Data Loss Prevention (DLP) policies and Data Security Posture Management for AI. The best practice of "test first" and the broad scope for sensitive data protection are consistently recommended.

NEW QUESTION # 191

You have a Microsoft 365 E5 subscription.

You need to create a Microsoft Defender for Cloud Apps policy that will detect data loss prevention (DLP) violations.

What should you create?

- A. an activity policy
- B. a session policy
- C. a file policy
- D. an access policy

Answer: C

Explanation:

To create a Data Loss Prevention (DLP) policy in Microsoft Defender for Cloud Apps, go to the Microsoft Defender Portal, navigate to Cloud Apps > Policies > Policy management, and create a new File policy. Define the conditions by selecting a file filter and configuring the Data Classification Service for content inspection, then choose an Action for violations, such as creating an alert, and optionally, implementing a governance action like moving the file to quarantine. You can optionally set a policy severity, link it to risk types, and use sensitivity labels to ensure accurate file filtering.

NEW QUESTION # 192

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You recently discovered that the developers at your company emailed Azure Storage Account keys in plain text to third parties.

You need to ensure that when Azure Storage Account keys are emailed, the emails are encrypted.

Solution: You create a data loss prevention (DLP) policy that has only the Exchange email location selected.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Mailflow Rules in Exchange Admin Center and DLP Policies in the Security Center, both can achieve the same, Encrypt emails based on sensitive information types detected in the message body.

NEW QUESTION # 193

You have a Microsoft 365 E5 subscription.

You create a sensitivity label named Label1 and publish Label1 to all users and groups.

You have the following files on a computer:

- File1.doc
- File2.docx
- File3.xlsx
- File4.txt

You need to identify which files can have Label1 applied.

Which files should you identify?

- A. File2.docx and File3.xlsx only
- B. File1.doc, File2.docx, and File3.xlsx only
- C. File2.docx only
- D. File1.doc, File2.docx, File3.xlsx, and File4.txt

Answer: A

Explanation:

<https://learn.microsoft.com/en-us/purview/sensitivity-labels-office-apps#office-file-types-supported>

NEW QUESTION # 194

.....

We have professional IT workers to design the Microsoft real dumps and they check the update of dump pdf everyday to ensure the SC-401 dumps latest to help people pass the exam with high score. So you can trust us about the valid and accuracy of SC-401 Exam Dumps. Our braindumps cover almost questions of the actual test.
