## Sample Questions (Q123-Q128):

### NEW QUESTION # 123

What are the three considerations that the architect should recommend for Change Set deployment?

Choose 3 answers

- A. Change Sets cannot be used for orgs affiliated with same production org.
- B. Change Sets cannot be automated.
- C. Change Sets cannot be rolled back.
- D. Change Sets cannot be reused between Production Salesforce orgs.
- E. Change Sets cannot be validated before deployment

**Answer: B,C,D**

Explanation:

Change Sets are a manual way of deploying metadata components between orgs that are affiliated with the same production org. Change Sets cannot be automated, rolled back, or reused between production Salesforce orgs. Change Sets can be validated before deployment, and they can be used for orgs affiliated with the same production org.

### NEW QUESTION # 124

What are three advantages of the package development model?

Choose 3 answers

- A. Providing its own source control, so the source can be deployed In any sandbox orgs.
- B. Improving team development and collaboration.
- C. Eliminating the need of using change set, which should no longer be used as it can get messy working with package development models.
- D. Significantly reducing the need for manually tracking changes.
- E. Facilitating automated testing and continuous integration.

**Answer: B,C,E**

### NEW QUESTION # 125

Universal Containers' org is complex but well-organized in unlocked packages with their dependencies. The development team was asked for a new feature, and the package that will be changed has already been identified.

Which environment should be used for this development?

- A. A scratch org with all installed packages.
- B. A Developer Pro sandbox with all packages installed.
- C. A scratch org with the package code that will be changed and its dependencies
- D. A Developer Pro sandbox with the package code that will be changed and its dependencies installed.

**Answer: C**

### NEW QUESTION # 126

Northern Trail Outfitters (NTO) recently acquired Eastern Trail Outfitters (ETO). NTO's sales leadership team had hands-on experience with the ETO's Sales Optimization app and have given the feedback that the app would benefit NTO's sales team.

Which option should the architect recommend for having ETO's Sales Optimization app in NTO's Salesforce org in the shortest possible time?

- A. Create an unmanaged package of the app and deploy in NTO's org.
- B. Create a managed package of the app and deploy in NTO's org.
- C. Create a core team and build the Sales Optimization app in NTO's org.
- D. Create users in ETO's org and provide access to NTO's sales team

**Answer: A**

Explanation:

Creating an unmanaged package of the app and deploying it in NTO's org is the best option for having ETO's Sales Optimization app in NTO's Salesforce org in the shortest possible time. An unmanaged package is a collection of components that can be easily installed and customized in another org. Unlike a managed package, an unmanaged package does not have any restrictions or dependencies on the source org, and does not require a security review or approval from Salesforce. Creating a managed package, creating users in ETO's org, or building the app from scratch in NTO's org are not as fast or efficient as creating an unmanaged package.

#### NEW QUESTION # 127

Universal Containers (UC) wants to shorten their deployment time to production by controlling which tests to run in production. UC's Architect has suggested that they run only subsets of tests. Which two statements are true regarding running specific tests during deployments? Choose 2 answers

- A. To run a subset of tests, set the Run Specified Tests test level on the DeployOptions objects and pass it as an argument to deploy() call.
- B. run a subset of tests ,set the RunLocalTests test level on the DeployOptions object and pass it as an argument to deploy() call.
- C. Specify both test classes and individual test methods that are required to be executed as both are supported in DeployOptions.
- D. Specifying the test method is supported in DeployOptions, therefore specify only the test classes that are required to be executed.

Answer: A,D

#### NEW QUESTION # 128

.....

We provide a wide range of learning and preparation methodologies to the customers for the Salesforce Development-Lifecycle-and-Deployment-Architect complete training.
