CIS-Discovery certifications are thought to be the best way to get good jobs in the high-demanding market. There is a large range of CIS-Discovery certifications that can help you improve your professional worth and make your dreams come true. Our CIS-Discovery Certification Practice materials provide you with a wonderful opportunity to get your dream certification with confidence and ensure your success by your first attempt.

The Certified Implementation Specialist - Discovery certification is one of the advanced certifications offered by ServiceNow. Certified Implementation Specialist - Discovery certification is suitable for IT professionals who desire to design, configure, and test the ServiceNow Discovery solutions. By acquiring this certification, you will learn how to implement ServiceNow workflows and design ServiceNow Discovery configurations that will enable the platform to discover and map different network components, software and hardware assets and their relationships.

The CIS-Discovery Exam is an important certification for IT professionals who work with ServiceNow Discovery. It demonstrates the candidate's expertise in the field and provides a competitive edge in the job market. Additionally, it allows organizations to identify individuals who have the necessary skills to manage and deploy the ServiceNow Discovery application. CIS-Discovery exam consists of 60 multiple-choice questions and has a time limit of 90 minutes. Candidates must achieve a score of 68% or higher to pass the exam and earn the certification.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q65-Q70):

NEW QUESTION # 65

Which of the following properties define the maximum overall size for the returned payload that comes from patterns?

- A. mid.discovery.max_payload_size
- B. glide.discovery.payload_max
- C. cmdb.properties.payload_max_size
- D. mid.discovery.max_pattern_payload_size

Answer: D

Explanation:

The mid.discovery.max_pattern_payload_size property defines the maximum overall size for the returned payload that comes from patterns. This property is set on the MID Server and applies to all patterns that run on that MID Server. If the payload size exceeds this limit, the pattern execution fails and an error message is logged in the ECC queue. The default value of this property is 10 MB. 1: ServiceNow Docs - MID Server properties for Discovery and Service Mapping 2: ServiceNow Docs - Discovery payload size and processing

NEW QUESTION # 66

You should use _____ when using the SNMP Query operation.

Response:

- A. the management Information Base (MIB) from the SNMP Browser in the step
- B. Scalar Variable Types
- C. the management information base (MIB) from the manufacturer of the device you are targeting
- D. Multiple Variable Types

Answer: C

NEW QUESTION # 67

Which of the following choices must be installed on a MID Server to run Credential-less Discovery?

- A. Nmap
- B. Credential-less Extension
- C. Advanced IP Scanner
- D. Defender

Answer: A

Explanation:

Credential-less Discovery is a feature of ServiceNow Discovery that allows the instance to identify configuration items (CIs) without using credentials. Credential-less Discovery uses Network Mapper (Nmap), a free and open-source network scanner, to collect information about the CIs by sending packets and analyzing the responses. Nmap must be installed on the MID Server that runs Credential-less Discovery. Credential-less Discovery can be used as a fallback option when credential-based probes fail, or as a primary option for scanning certain types of devices, such as network devices, printers, or IoT devices¹².

NEW QUESTION # 68

What operation is shown in this image? (has image took pic)

- A. Union Table
- B. Transform Table
- C. Put File

- **D. Parse Variable**

Answer: D

Explanation:

Without seeing the specific image, it's challenging to definitively identify the operation. However, based on the options provided, if the image shows an operation that involves interpreting or extracting data from a variable, then "Parse Variable" is the most likely answer. "Parse Variable" is used in ServiceNow Discovery patterns to analyze and extract data from variables collected during the discovery process. References = ServiceNow Discovery documentation, particularly the sections on Discovery Pattern Designer and the various operations that can be used in patterns.

NEW QUESTION # 69

Which of the following choices may be global variables for steps in horizontal discovery patterns? (Choose two.)

- A. baseline
- **B. system**
- **C. computer_system**
- D. process

Answer: B,C

Explanation:

Global variables are variables that are automatically available for all steps in horizontal discovery patterns.

They store information about the target CI, such as its IP address, host name, operating system, and credentials. There are two global variables that may be used for steps in horizontal discovery patterns: system and computer_system. The system variable contains the information about the target CI's IP address, host name, and credentials. The computer_system variable contains the information about the target CI's operating system, such as its name, version, and architecture12.
